Yamaha tenor sax mouthpiece guide

The most important factor in choosing a reed is the thickness of the aneration oil. The thickness of the reed is most often expressed as a number. The normal range for olive growers is 2 to 5: the smaller the number, the thinner the olive tree and the higher the number, the thicker the olive grove. The thickness of the cane will affect the tone and how easy or difficult it is to play the instrument. In general, a thinner reed, say 2 or 2.5, will have a brighter tone. Thinner reeds vibrate more easily, so that's good for beginners. Players of folk music or jazz often prefer this brighter tone and thus use thinner andrea. Reeds with a thickness of 4 or 5 are harder and thus require more ability to sound, but the tone is thicker, larger, and warmer. By the way, the olive tree is expendable and should be replaced frequently. This is sometimes a concern, so, recently, suitable resin reeds that are easy to maintain and last a long time have appeared. An important point when choosing a cane is compatibility with the mouthpiece. The space between the tip of the mouthpiece and the edge of the attached olive oil is an important factor affecting the performance of an olive-digit instrument. This space determines the channel following the player's breathing. The opening in the mouthpiece is called the opening edge. For example, what will come from a mouthpiece with a narrow edge opening and a thin reed? The vibration of a thin cane has a higher width, and thus the vibrating reed will completely cover the mouthpiece, blocking the air channel and possibly suddenly interrupting the sound of the instrument. Important mouthpiece features in addition to the opening edge are the table where it is made, and the frame, the angle of the curve near the edge of the mouthpiece. There are specific specials to meet these requirements. It is necessary to choose a reed that fits the specific shape of the mouthpiece. The names of the mouthpiece sections However, more advanced players can play the most difficult to play combinations, and so they can choose the combination of mouthpiece and reed to achieve a specific sound. For example, to achieve a deeper, darker tone, many players choose a mouthpiece with a large opening edge and a thick well. So there are many different views on mouthpiece and reed combinations, and there are an infinite number of combinations. This may be why many beginners get confused at this point. If you're not sure what the carriage and mouthpiece should choose, consult the staff at your local music store. Colors and finishes may differ from those for actual products.
