Докладніше 4P Comp-XM competence exams page 1 is built around a simulation similar to Capstone and the Foundation. Comp-XM, the players work alone - they are no longer on the team. The Comp-XM sector has four market segments. Each individual member is the sole decision maker at Andrews. Andrews competes with three computer companies, Baldwin, Chester and Digby. The Comp-XM simulation lasts four in a row. The simulation performance shall be evaluated using a balanced scorecard. In each round, the result is generated on the basis of performance measures in the following categories: Learning and growth of clients in the internal financial business process at the end of round 4, the fifth result is generated using another set of measures that evaluate cumulative performance in rounds 1-4. Participants also answer five set of multiple optional questions, called board queries. Questions are common to each participant, and therefore exam performance can be compared to class-wide, school-wide or even all Comp-XM users. However, the answers are based on each individual simulation. This makes the questions comparable, but the answers are unique. Instructors can assign Comp-XM when they create Capstone or Foundation simulations, or later after the simulation is started. It is not possible to assign Comp-XM to compromised. Capstone and the foundation can be seen as preparing comp-xm. The sectors can be assigned after the exam has been created. Page 2 of the Comp-XM Competency Exam is built around a simulation similar to Capstone and foundation. Comp-XM, the players work alone - they are no longer on the team. The Comp-XM sector has four market segments. Each individual member is the sole decision maker at Andrews. Andrews competes with three computer companies, Baldwin, Chester and Digby. The Comp-XM simulation lasts four in a row. The simulation performance shall be evaluated using a balanced scorecard. In each round, the result is generated on the basis of performance measures in the following categories: Learning and growth of clients in the internal financial business process at the end of round 4, the fifth result is generated using another set of measures that evaluate cumulative performance in rounds 1-4. Participants also answer five set of multiple optional questions, called board queries. Questions are common to each participant, and therefore exam performance can be compared to class-wide, school-wide or even all Comp-XM users. However, the answers are based on each individual simulation. This makes the questions comparable, but the answers are unique. Instructors can assign Comp-XM when they set capstone or foundation simulations, or later after is already in progress. It is not possible to assign Comp-XM to compromised. Capstone and the foundation can be seen as preparing comp-xm. The sectors can be assigned after the exam has been created. 7.1 Comp-XM Instructor Environment From Professor Pages, click on the My Comp-XM Exams link. 7.1.1 Create a new exam If instructors are assigned to Comp-XM when they set up their Capstone or Foundation industries, they will still have to follow the Create new exam procedure. The Create new exam area requires a test name, start time, and completion time. Instructors can also assign participants by linking their Capstone and Foundation sections to the exam. If Comp-XM was not included in the Capstone or Foundation sections at the time of creation, and therefore participants were not asked to pay additional costs, instructors are asked to follow an additional step by adding the exam to participants in the Shopping Cart. Participants will be asked to either pay additional costs or enter the Comp-XM registration number before they will be allowed to take the exam. 7.2 Exams After clicking My Comp-XM exams from the professor's page, professors are taken to the Exams page. This page lists all the exams. The exam status falls into three categories: Gaida (Exam that has not yet started.) Active (exam, what happens.) Completed (Exam that is completed.) 7.3 Exam Dashboard Clicking on any exam title exam page opens this exam dashboard. The exam dashboard is a central area from which instructors access the tools needed to administer and review the Comp-XM exam. The page contains a link to a sample of the environment of Comp-XM members, including board queries (see section 7.3.1). Exam preferences This field allows instructors to change whether the results will be available to participants at the end of each round when the exam is completed or not at all. You can also set up benchmarking methods. Participants can be compared to: All Comp-XM members; Members of the same peer group (bachelors, graduates, .c.); Participants in the same simulation (Capstone or Foundation); or Participants in the same peer-to-peer group and in a simulation. Time zone and date formats are also set using preferences. 7.3.2 Exam Editor Located in dashboard center, exam editor allows quick access to exam elements. By clicking any cell below the Scorecard tab, instructors can review the current Balanced Scorecard criteria. By clicking any cell under the Questions tab, the instructors can review the current board Query question set. By clicking any cell under the Deadlines tab, instructors can review and update the round start and stop times. By default, all Comp-XM exams are self-paced, that is, participants can progress at their individual speed using four consecutive simulations and five sets Board queries. Instructors only need to enter the starting time and deadline for round 1 by clicking the appropriate line in the Deadlines column. Instructors who want to schedule rounds will go round for the start and end times of all four rounds and the final deadline to respond to the final set of Board Queries. Self-paced exams only require a round 1 start time and a final term. The Students tab opens an area where you can add or subtract the Capstone or Foundation sections that you want to associate with the Comp-XM exam. All participants registered in these sections will be assigned to the exam. Exam Editor, Pending Exams Instructors can customize Pending Exams with their own set of Board Queries or Balanced Scorecard values. The participant's results can be compared to their peers, such as Graduate and Bachelor or Capstone and Foundation. However, if the balanced scorecard is customized or the board queries are customized, adding more than five questions or deleting more than five questions from the standard exam, the comparative data will not be available. Although this option creates flexibility, most instructors use default questions and balanced scorecard values. If the exam is pending by clicking the Raditaju karte cell on each line, the instructors can adjust the scorecard for that round. By clicking the Last cell, instructors can adjust the cumulative steps for rounds 1 to 4. If the exam is pending by clicking the Question cell in each row, the instructors can customize the board queries for this round or the last board query. Exam Editor, Active Investigation Board query and balanced scorecard values can be reviewed, but they cannot be changed for active exams. Active exam schedules can be customized. Grading Essays If they are planned, essay questions are reviewed and graded from the Exam Editor: a pencil icon appears when the essays are uploaded and ready for review. Essay questions are the default point value. When classifying professors, interest is given to each answer. For example, if a participant answers an essay-type question worth 50 points and the professor assigns 50%, the participant would receive 50% of the 50 points or 25 points. Essay questions are not part of Capsim's default question set. 7.3.3. Review board queries as a student This link allows instructors to review the facsimilation of the participant's Comp-XM environment (see section 7.4 of the Comp-XM members'

environment on page 42). 7.3.4 Student progress instructors use the search form to open the student development area. When you select All, all attendees are displayed. The results progress during the exam, the Board Query responses and balanced scorecard results for each participant are available through student progress. After the final exam, comprehensive results are displayed in the student outcomes (see 7.3.4. Read for Students If is not set up for the instructors have two methods to catch read participants along with the rest of the class. Instructors can move forward from the student progress area or choose to continue in self-study mode. Instructors can also undo simulation sequences and related board queries for individual participants. If the instructors aberration the participant' round, the participant will not receive a percentile ranking of 7.3.4. 7.3.5. Student results When Comp-XM is completed, links in the field of student outcomes become active. Before completing the exams, instructors can review the participants' council's query responses and the results of the balanced scorecard using the student development field (see Section 2.1.1). Student scores Comp-XM student results show accurate results in balanced scorecard and board queries. The page also contains links to each participant's balanced scorecard result breakdown and board query responses in each round. The comparative points comp-XM comparative indicators include a graphical representation of each participant's percentile based on the performance of comparable groups (e.g. other bachelor countries). In the class standings, instructors can compare the class standings with the activities of comparable groups (e.g. other bachelor's countries). Learning assurance Learning assurance generates reports designed to help assess specific learning goals. The reports can be used as supporting documents (together with other methods and measures) for training assessment puroposes. Export data to a CSV file in csv file file format that can be imported into a Microsoft® Excel® spreadsheet are available in the Student Results area. CSV files are a great way to archive results. 7.4 Comp-XM Member Environment 7.4.1 Getting Started In the Getting Started area, the First Time Sign Up for The Participants is displayed in the Comp-XM simulation. Participants should review the information. They can return to it at any time by clicking the Get Started link. 7.4.2 Dashboard Each next login opens the Comp-XM Dashboard. The dashboard is a central area of all participants' activities. Some Comp-XM simulations progress on a specific schedule. This area will show the start and stop times for each round. Most Comp-XM simulations are definitely self-paced. When Comp-XM is set to be self-paced, players have a chance to move on to the next round when they feel they are ready. Once they are finalizing their decisions using a Com-XM spreadsheet and have responded to all round board queries in the home board Query area, members click on the Advance button to advance to the next round. Participants will not be able to return - they must be sure of their decisions answers are final. Instructors can return participants to the previous round using 7.3.3. Trainers progress in the instructor's Dashboard (see page 41), however, at the end of the exam, that participant will receive only the raw result - the percentile score will not be calculated. See section 7.3.4 Student Outcomes on page 41. The 7.4.3 Comp-XM Spreadsheet Downloads area includes links to Comp-XM Excel® and Web spreadsheets, as well as a PDF version of the Comp-XM booklet. Participants use a Comp-XM spreadsheet to identify and upload decisions. Participants can download this file to as many locations as necessary. As they launch the Comp-XM spreadsheet, immediately open the login form. Participants use the same user ID and password they used in the previous simulation. The Comp-XM spreadsheet is very similar to Capstone and Foundation Spreadsheets, however there are differences. The perceptual map has four segments, and in the first layer the segment positions are located in the middle of the card. This is because the players take control of the ongoing corporateevolved market. The Members' Comp-XM Help page includes the Comp-XM segment deviation animation. Unlike Capstone and Foundation, 1 Round Comp-XM all companies have different product locations and financial results. The Comp-XM sensor industry has four competitors. The members run the Andrews company. They compete with Baldwin, Chester and Digby. Individual members are the only decision makers - Comp-XM is not a team action. Therefore, each save uploads all decisions. 7.4.4 Human Resources (HR) and TQM (Total Quality Management)/Sustainability Modules All Comp-XM simulations use Human Resources and TQM (Total Quality Management)/Sustainability Modules. If participants are not familiar with HR and TQM/Sustainability modules, they can view the documentation available on the Comp-XM help page on the website. Unlike the foundation, HR decisions for Comp-XM are made in two locations. The workforce supplement is still included in the manufacturing sector, however Recruiting Spend and lessons are entered into the field of human resources (click Decisions | comp-xm spreadsheet menu). 7.4.5 Comp-XM Inquirer Industry Results is available in the Comp-XM Inquirer, which members can view from a spreadsheet or website. Unlike Capstone Courier and Foundation FastTrack, Comp-XM questioners are not available in previous rounds. 7.4.6. Board Queries When members click on the response board query link, a new window will open. Members confirm that they are an authorized user by clicking the I Accept button. On the next page there are instructions on the right and a list of questions on the left. Participants select a question to start with. The selected question opens and appears on the right. Almost all questions are asked by the Comp-XM Inquirer. Links Inquirer is available in the board query field. Unlike Capstone Courier and Foundation FastTrack, the Comp-XM Inquirer includes annual reports for all four companies. This is because many Board Query responses require access to the accounts of the resisting companies. If participants choose the wrong answer, they can change their responses as often as necessary. Participants can stop working and return later until they advance to the next round (if Comp-XM is in Self-Paced mode) or the round deadline fails.
