A level list is a list of playable characters or other elements of a video game, subjectively ranked according to their profitability in competitive high-level settings. Characters listed high in the level list of a particular game are considered powerful characters compared to lower-scoring characters, and are therefore more likely to be used in tournaments. Tier lists are popular in combat games such as street fighter and Super Smash Bros. series, as well as in the multiplayer battle arena such as League of Legends and Dota 2, in addition to hero shooter titles such as Overwatch and Paladins. Methodology When a competitive game receives an update, the question which is how changes to the game will affect the list of levels. Even when no balancing changes have actually occurred, enabling new characters or new systems can affect layer lists. In combat games, the strength of the character is always maintained in relation to other characters, which means that something that is strong in one fighting game does not necessarily have to be strong in another. Metagra can change over time when dominant strategies are overturned using less common characters. [1] Level rankings can be displayed using letter classification. For example, the competitive community surrounding Guilty Gear Xrd classifies characters as S, S-, A+ and A, where S-levels are particularly powerful and A-levels are less. [1] Major video game news services such as The Daily Dot and Kotaku can publish their own list of popular game levels. [2] [3] Level S can mean Superb or Super. In a game like Super Smash Bros. Melee, which was released in 2001 and has not been updated since then but is still popular in tournament settings, originally overpowered characters remain that way due to their inability to receive character balancing updates. The Smashboards page bases its annual level lists for the Super Smash Bros. series. on the results of the vote. Maddy Myers noted that characters considered low-level characters have an advantage over higher-level characters because players have less experience dealing with low-level characters and often underestimate them. Myers stated that the element of surprise may only surprise you so far, but it is still an undeniable asset. And one that enjoys the bottom third of each list of levels. Already popular characters can also rise in the level lists, as high-level players establish and iteuch their combinations and techniques. Myers also noted that level lists are less useful in team games because character roles and team composition introduce a complex set of variables. [6] References ^ a b Ellis, Anne (2016-05-27).
