A metal cylindrical container with an open top is to hold

guest permit or live at Apple Hill Farms. Trails open at dawn dusk Hike marked trails only please help keep our trails clean and wear, perform No removal or destruction of plants or animal life Swimming / Ice rink is prohibited or on pond zones Prohibited items Pets Cross-country skiing Smoking Bikes Drugs / Alcohol Camping Motorized vehicles All hiking trails Purdy Save there are steep terrain and uneven surfaces that will be difficult for some hikers. Please hike carefully. Backpackers are asked to consider carrying a cell phone. Olson Trail 0.8 km (1 way) Nelson Pond Loop 0.7 km (loop + access trail) Muir Woodland Trail 0.8 km (loop + access trail) Archibald Trail 0.2 km (1 way) Lap thomas pass 0.45 km (1 way) Leopold Prairie Loop 0.75 km (loop + access trail) William Horvath Trail 0.4 km Deer Trail 0.5 km Philosophy or Why Should I Take Philosophy? Dave Yount, Ph.D. When someone who doesn't know me well comes to know that I am a philosopher, the next question that he or she inevitably asks is: What can you do with philosophy without teaching? My answer is and has been: You can think, and hopefully get better. Part of philosophy is critical thinking, which is the ability to doubt (or someone else's) assumptions, discover and hopefully artiso good reasons for your position, no matter what... Set the dimensions of the rear part to reduce the amount of metal required (for example, that the top and sides of the cana are made of metal of the same thickness, the right circular cylindrical container , it contains 2160cubic cm of water. Trash company designs an open, rectangular container that will have a volume of 135 feet ^ 3.The price of the container bottom is $5 per square foot, and the price of the sides is $4 per square foot. The cylindrical tube, opened at both ends, is made of metal. The internal diameter of the pipe is 10.4 cm and the height is 25 cm. If the thickness of the metal is 8mm everywhere, counting the volume of metal in the cylinder it is a great problem for you to learn something from if you are doing the work yourself. There are some nice calculations; and there are many ugly arithmetics with expressions, such as cube root pi. I will lay out the way to solving the problem and hope that you decide to fill in the details. Or, of course, another lecturer will see the problem and give you a complete solution; and you can use that if you don't care to challenge yourself to solve the problem yourself. The cylinder volume is 24: (1) The area of the bottom of the cylinder is; the area of the sides is . With cylinder bottom material costing $0.15 per square meter and side material costing $0.05 per square meter, the cylinder production price is (2) Steps you can perform: 1. Solve the equation (1) h by r 2. Change to equation (2) to give you the cost function only see 3. Find the expense feature derivative. 4. Set the derivative to 0, and solve it to find the r value that reduces costs. So, you can check your work, I will tell you that the r value that reduces the cost is the next step for you: 5. Find expression h by replacing this r value in the equation from step 1. Over. I will tell you that the expression h is very similar to the r expression, having a constant in the numerator and the root of the cube in pi denominator. Last step: 6. Evaluate the cost function of the found r and h values. When r and h are constant forms divided by the root of the pi cube, both terms in the cost function (Equation 2) will be some constant times cube root pi. When measured, that minimum cost function value is actually $2.64 when it is rounded to the nearest cent. +100Join Yahoo Answers and get 100 points today.
