New prague middle school

The first, biggest battle in becoming the parent of a college student is this: wrap your mind around the fact that your baby (the baby's accent) will soon be thrown to the wolves - or at least the snarling bouquet that seems to populate your child's future school. Since when did the 6th graders grow favorites? Stop breathing in that paper bag. Your child will be fine. We know that as a parent, it can be difficult to see your baby grow up and become your own person. Watch them pile up under the pressure of a new school, peers, sports and homework, and just make you want to go back for simpler days - the ones that involved cajoling an intrepid toddler by eating broccoli. But that, my friend, is your first mistake. It's time to move your mental game. If your child's foray into college is going to be OK (and it is), then you have to get your head in the game. And that means realizing that your child is growing up and charting a strategy to deal with it before the first day of school arrives. Survival Strategy Two: Independence Day Sweet Freedom. College stickers want it, but can't handle too much of it, and you might not be ready to start letting go. The key is to find a healthy balance for both of you. One way to do this is to satisfy your child's desire for freedom (which is a natural developmental phenomenon, by the way) by allowing them to participate in a variety of approved activities. Playing on the basketball team, for example, provides your child with an outlet for many things: camaraderie, physical activity and even peer pressure. Yes, peer pressure can have a good side. Just ask any preteen who failed pre-algebra, was benched by the coach and let his teammates down. It won't happen again. Better yet, organized extracurricular activities offer your child a (supervised) chance to get away from your alert eyes. But you can still participate by applauding the games, applauding a two-part piece or going to an art exhibition. Whatever your child's interests, give them a way to explore them. Your role is to provide limits, limits and support. One way to practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to manage time, make choices and solve problems. Help your child set up a system -- a place and a time to study with all the necessary resources -- and then let him meet the challenges of college homework without your hovering presence. Stay in with the teachers, even if your child assures you that it's the coolest thing you've ever done. That's why an intelligent person invented email - use it to send the occasional question about your child's performance in class. Survival Strategy Three: Oh, the drama it's hard to be an interpolation bent over teen-hood. Not Not Is there increased self-awareness (thank you, puberty), but there are also a host of new relational situations to encounter. When the school turns into a fashion show or popularity contest, all this drama becomes a bit risky. This is because it is difficult for parents to know when to intervene and when to let their son or daughter cope alone. We happen to agree with Joe Bruzzese, author of Parents' Guide to the Middle School Years, who advises parents to play a supportive role as peer relationships develop and dissolve. Of course, we were guilty of composing the mother of the average girl and having our say, but we learned the hard way that it doesn't usually help. Avoid the daily drama of friends, but be prepared to intervene if you feel your child is being bullied. Another minefield to avoid? Mode. Set a few clear limits, such as the length of the hem or a belt break point, but be prepared to let your child have a say in what he or she is wearing. While preteens demand friendship in the college melee, they are likely to try a variety of styles. Personally, we don't start worrying until talk of multiple tattoos and piercings come into play. As you guide your college, remember: Your role is not that of perfection. Shake off any nagging doubts about your self-esteem that may bubble to the surface the first time you chaperone a college dance. (Hey, it happens!) The key is to be involved, even if you allow your preteen more autonomy. According to a report by Johns Hopkins University researchers, when you're on the college scene, your child is more likely to have better grades, attendance and homework skills. Plus, they'll be prepared to succeed in high school. Hyperventilation again? It is ok. You can put that paper bag down. We'll leave our high school discussion for another day. Page 2 Back-to-school means stocking up on pencils, glue sticks and other traditional supplies that generations of children have stored in offices, cubbies and lockers. In primary and middle schools, teachers usually provide lists of specific items to pick up; and even in high school, many instructors need certain types of notebook paper, pens and others. In addition to the classic supplies -- pencils, notebooks, rules -- that continually make these back-to-school lists, there are also a number of others to keep in mind. Today's student has an arsenal of utensils and gadgets to help him manage the workload and improve the learning experience. Whether it's a new version of a classic or a newfangled gadget, these five cool school tools make the mark to get your son or daughter to study in style. Content Even pre-K students can get ahead of their computer skills with laptop learning. For less than \$50, these portable gadgets can enhance the basic skills taught in the classroom with fun and educational games and and in their brief history, learning laptops now come in pocket sizes with more sophisticated graphics and a wide range of software that covers topics including reading, math, foreign languages and more. Children can navigate through several of these models with a keyboard, electronic stylus or control block with an interface like a video game system. For middle and high school students who need word processing and Internet access capabilities, netbooks are a great option. At a cost of a few hundred dollars, these mini laptops have been seizing technology titles for their usefulness and affordability. In fact, some schools are starting to use netbooks in the classroom because of their budget assets. Advertising Finding the perfect backpack is crucial for many school-aged children. After all, they kept him with them every day and want him to make a cool impression. Parents are probably more concerned about the toll the pack takes on these young backs. Fortunately, there are alternatives to please both parties. Unfortunately, you're probably going to have to spend more money in exchange for ergonomic quality. To protect the back and spine, watch out for packages with lots of padding. Padded straps and rear panels are good signs. Make sure the straps fit perfectly against the body, and that the backpack comes with a chest strap for extra support. When carrying the backpack, it should sit higher on the back rather than force the spine by clinging to the hips. There are also rolling backpacks to choose from, but some schools no longer allow them. And they could interfere with that crucial cooling factor that your student requires. Advertising It is important that schoolchildren learn to add, subtract and so on in their head - with the occasional help of their fingers and toes. But when the top math is rolling in the college and ahead, it's time to get the big guns out. Calculators have been a routine item in the backpacks of older children for a while now, and they now offer more help in math and science than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage and tutorial programs pre-installed on some models. Students can also now choose from more aesthetically pleasing calculators, such as bubblegum pink graphics editions and beginner red firefighter models. Advertising Pencil and paper will never be out of style to take notes. But for techie students out there who want to make the most of their note-taking abilities, Smartpens are neat and relatively inexpensive at about \$150. LiveScribe Pulse Smartpen writes on specialized paper that digitally records what you write and where on the page. At the same time, the pen can also capture audio, which means a student can take notes and record the conference at the same time. When he Time to study, the Smartpen hooks into a computer to download all the notes into one source. In this way, students can place the Smartpen on notes on the specialized paper to hear the corresponding audio. If your student doesn't need so much technological magic, Leap Frog's FLY Fusion Pentop computer also digitally records what a student writes. The writing device then converts written notes into digital documents. Like the LiveScribe Smartpen, Pentop also requires specialized paper. Since pentop does not record audio, there are many discrete mP3 recording devices and audio recording add-ons for iPods that can fill this function advertising between note taking, laptop learning and backpack toting, children must do their homework. Whether it's solving a difficult mathematical problem, researching a science fair project, or creating a bibliography for a futures article, the Web has a wealth of educational resources. But tracking down the best of these resources can be difficult, and parents may be reluctant to release their children on the Internet. Fortunately, some companies have developed strong homework programs for students of all levels of learning. DiscoveryEducation.com, for example, provides support for seven different areas, as well as interactive games and external web links tailored to students for additional tutoring. Using a monthly fee, Cosmeo by Discovery Education is a one-stop shop for Discovery videos, scholarly articles, step-by-step academic teaching and more. By using the breadth of valuable information online, children can improve their learning experience and continue to make A-grades. Advertising advertising
