The f variable list is friction, m is mass, a is acceleration, V is velocity, r is radius, W is weight, n is normal force, T is time, g is the gravity acceleration on Earth, and  $\mu$  is the static friction factor. First draw a diagram of the rider's free body on the Second Rotor-ride writes a summing up of the force statement for forces in the direction of X.  $\Sigma F_x: n=ma$   $n=mV^2/r$  Third writes a summing up the force statement for forces in the direction of Y.  $\Sigma F_y: f - W = ma$  Because there is no acceleration, ghost cancellation.  $f = W$  Add W.  $\mu n = mg$  Divided by n.  $\mu = mg/n$   $\mu = mg/mV^2/r$  Divided by m.  $\mu = g/V^2r$   $\mu = g/(2\pi r/T)^2r$  Substitute in the equation for velocity.  $\mu = g/4\pi^2 r^2/T^2r$  Divided by r.  $\mu = g/4\pi^2 r/T^2$   $\mu = gT^2/4\pi^2 r$   $\mu = (9.8\text{m/s}^2)(2\text{s})^2/4\pi^2 (5.5)$  As there are 0.5 laps per second, the total time will be 2 seconds. How much time it takes to complete a revolution. 0.5 revolutions per second 2 equals 1 revolution in 2 seconds.  $\mu = 0.18$  You can help us by modifying, improving and updating this answer. Update this answer After you confirm your answer, you'll have 24 hours to submit your draft. Editor will consider submitting and publishing your submission or providing feedback.
