Today, enterprises are almost obliged to have a presence on the Internet; e-mail is required to communicate with suppliers, customers and customers. But some business owners may not have the resources to afford paid email services or their own mail servers. Fortunately, there are free email sites available that can be accessed via webmail on the website or forwarded to your email program. One even has enough features to compete with paid email services. Free basic email accounts are available on Windows Live sites (formerly Hotmail), Excite, and Yahoo!. These accounts offer the ability to filter incoming mail into different folders, import POP3 mail from other accounts, and set up auto-answering. Excite and Yahoo! mail accounts are web pages, meaning you have to go online to see your mail. While these accounts are free, many spam filters will catch emails from the basic service; Overall, a Hotmail or Yahoo! email address doesn't often present you as a professional in the business world. Google Gmail is the most flexible and offers most features of any free service. It has options offered with basic accounts as well as much more. With Gmail, you can set up and use business email just like thisismybusiness@gmail.com, or use a domain name you already own, such as thisismybusiness.com, and use Gmail features to mask the fact that you're using a free email address for your professional contacts. Gmail is out of the extended beta phase, which means you no longer need an invitation to sign up. Just go to your Gmail website. Don't forget to choose a professional name for your email, preferably the name of your company. If the name is accepted, Gmail will offer replacements. You can accept one of them or try again with the other to take over the name. Once you've selected a name, you can use Gmail online or set options to import into your email app. Most domain names come with at least one free email address, depending on the service. If you want to disguise your Gmail address and you already have a domain name, go to the webmail page and then go to the Settings & Accounts tab. The first option is to add email addresses; and this is where you enter the email address associated with your domain, such as boss@thisismybusiness.com. Now every email you send with Google will list this email as sender. Once your Gmail settings are changed, sign in to the website that lists your domain. If you have a domain like GoDaddy, you will have a domain control panel. set up your domain email to forward to your new Gmail address. Now you have the best of both worlds: professional business email and a free mail server with many professional options. It can be frustrating when you get an email from someone you don't know. Sometimes you just don't recognize a friend or colleague's email. There are also when you receive unsolicited emails. The Federal Communications Commission says it is illegal for companies to send you promotional and promotional emails unless you have authorized them to do so. There are ways to identify the owner of an email account that you don't recognize. Browse your email address books to make sure you haven't forgotten someone's email address. If someone emails you who don't contact you often, you may have forgotten their email address. This is not uncommon given that billions of emails are sent and received daily around the world. Copy the email address as a whole if you still don't recognize the sender. Search Google for your entire email address to see if you come up with any hits. You may find who sent you the email address simply by searching for any details that have appeared to search for this particular email address. Use free return email search. You can often find the name of the e-mail owner by entering an e-mail address in the search form. The chances of finding the owner's name with free search are even greater if they use Yahoo!, Hotmail or one of the other widely used and free email providers. You can use a paid service to find the owner of an email account if you really need to know who sent you the email. Please note that even if you use paid services, you can't always find the owner's name. Visit the domain name website for your email address if you think it's an email from the company. For example, if you received an email from AJ@pizzaplace.com, visit www.pizzaplace.com. Find contact information to see if you can find the name of the person who sent you the email. You can also contact the company directly to find out who sent you the email. Reply to the email you received if you can't easily find the owner's name. In some cases, the email will be automatically generated and you won't be able to contact anyone. However, you can send a note to your email address asking for more information about why they will contact you. Be warned, although reply to a spam email can check your email address for a spammer and thus encourage more spam. Warning Don't spend too much time searching for the owner of your email address. There will be times when you receive a spam sheet that you won't be able to trace to a particular person. Free email accounts may seem like a dime dozen, but there are some free services that stand above others. This article will help you through the best free email accounts and which features make them better. When choosing a free email account, you'll want to find a few characteristics to help you determine which one is best for you. Accounts will be different in how much email memory you get, what the interface looks like and how it can customizable and what types of additional features are included, such as messaging, filters, and the ability to import other data. It's also probably important to you that your actual email address. If your first choice doesn't give you the address you're looking for, just go to the next one in the list. Don't forget to try different combinations and options to get an address that isn't accepted. If necessary, try the user name generator. If you subscod to a new email account because you don't know your current account, it might be easier to just know what your email address is to avoid creating a new account. Never disclose personal information to your email address, such as your home address, or phone number. It's common for email addresses to be a number with a pair of numbers, or a word or phrase that means something. Review these secure email services if you're concerned about privacy, but remember that even an encrypted email service isn't enough to hide your identity; it is good practice to also use VPNs and other security methods. Depending on how you use your email online, someone can find your email address and link it to you. It's perhaps not surprising that Gmail makes the top of this list for one of the best free email accounts. Gmail is Google's free email service, which has a nice and modern feel, is closely integrated with other Google services and is pretty good at blocking spam. makes the top of this list for one of the best free email accounts. Gmail is Google's free email service, which has a nice and modern feel, is closely integrated with other Google services and is pretty good at blocking spam. Gmail also has some other amazing features, such as the ability to snooze emails for later, send and request money through Google Pay, scheduling emails to be sent later, and sending emails that expire and can only be opened with special code. There are also various themes that you can apply to the Gmail interface to customize its look, a lot of advanced settings and the ability to create filters and labels, import email from other accounts, use the chat client and, among other features, install gadgets (apps) to extend Gmail functionality. Here are some other notable features in Gmail: Allows you to read emails offline with Gmail OfflineShares a huge 15 GB of email memory with other Google services via Google Drive, allowing you to easily share files from your Google Account directly in email (even files up to 10 GB in size!) Can undo an email if you send it accidentally (and catch it on time)There are numerous keyboard shortcuts for Gmail that you can use to make the service even easier to use. Because Google Calendar is another part of Google's list of services, it's equally easy to integrate with emails, such as instantly adding events taken from messages. Allows you to configure the rest the respondent to automatically send emails when you are away. With advanced search options, you can find emails in your Gmail account. All Gmail email addresses end with @gmail.com. However, you can also send messages to other addresses, and they'll still arrive in the same account. This is really useful if you want to use your Gmail account to sign up for multiple accounts on the same website. The site will see each ittheca as different, even if they are still connected to your primary email account. If you have a YouTube account, you can sign in to Gmail with the same information because YouTube is another Google service that can be accessed through your Google Account. Here are some examples of Gmail addresses that are technically the same: example@gmail.comexample@googlemail.comexample+anything@gmail.comexa.mp.le@gmail.com Download for: Outlook.com includes a free Microsoft email service that, like Gmail, has a robust interface that's easy to work with. It's easy second to Gmail or even linked as the best free email service provider. Changing the way you use Outlook.com couldn't be easier. You can change the color scheme of the page very quickly and choose where the Reading Pane is displayed. Outlook is really intuitive – it's as easy as right-clicking an email to find more options, such as moving/deleting messages and finding every email from that one sender, for example. Email rules are supported Outlook.com which means you can set new messages to automatically move to the specified folder, be categorized, marked, etc. Outlook.com there are some other features worth mentioning, also: You can connect directly to Skype via your email. This is closely related to the Outlook calendar so that events can be split between them. Add-ins are supported, as are those PayPal, DocuSign, Trello, Boomerang, GIPHY and many others. Users can easily access other free Microsoft Outlook.com because they are part of the Microsoft Office Online website. When you create an Outlook.com account, the email message may end on @outlook.com or @hotmail.com. Download for: As it would seem obvious, Yahoo Mail has a free email account offered by Yahoo. Each new user receives a whopping 1 TB of free email storage! The new email creation window is a lot like Gmail, but one useful difference is that it's easy to switch between embedded image attachments and file attachments. This means that you can switch file attachments to be embedded in an email, and just as easily return it to make it a file attachment. Yahoo Mail is probably the best email service when it comes to alternate IDs or aliases. You can also create up to 500 one-time addresses associated with your primary email address but do not contain your name or any other personal data. This is extremely useful if you frequently subsced to web accounts and Want your regular email account to spam or filled with useless email; just delete a one-time address if spam becomes too overwhelming. Here are some other yahoo mail features: GIFs can be inserted directly from the built-in GIF collection and stationery using a similar stationery browser. A few great themes are available that change the entire background and color scheme of the website, making for a fairly unique design. It supports the ability to import contacts from a file on your computer, as well as from your Facebook, Google Outlook.com account. This makes it easy to transfer contacts from another email provider to Yahoo Mail.Has a built-in news reader and notebook. You can navigate to these views in seconds, and then it's just as easy to go back to reading and sending emails. Files can be attached from your computer, Google Drive or Dropbox.Yahoo Mail gives you access to the online calendarYv you can connect external email accounts to Yahoo Mail, so that you can use one interface to manage all your mail, even from services such as Gmail and Outlook Mail. Yahoo Mail email addresses are configured as example@yahoo.com. Download for: AOL Mail is another free email account option. The homepage, where you'll find your email, also includes Today on AOL, which shows top stories from AOL.com that can be seen as a welcome addition or seem cluttered depending on personal preferences. Like some email providers, you can quickly filter messages to show only unread or read emails, flagged or unencrypted messages. Many additional options can be configured how to change the sensitivity of the spam filter, control who (if anyone) you can send you mail, enable the reading pane and block mail containing certain words. In your mail settings, you can read imap and POP server settings that are very useful if you're using your AOL email address with offline email clients. Some other top email services don't display this information, so it's definitely positive. AOL Mail is not the same as the now discontinued AOL Instant Messenger (AIM). AIM was an instant messaging service and AOL Mail is an email service. Other AOL Mail features: You can configure alerts to send you a text message when certain criteria meet, for example if an email message from a specific contact that contains a specific word in the subject or body is delivered to your Inbox. Sound notifications in your browser are supported, and there are several options you can choose from. Such flexibility is not available for web mail accounts, but AOL Mail is an exception. There is a to-do list and a calendar with the ability to do events straight from emails. The background variable allows your emails to have a good background image. You can import contacts in CSV, TXT, or LDIF file formats. The AOL email address gives you an email example@aol.com, but you can also if someone sends you a message example@aim.com. Download for: Yandex - a Russian company that provides many tools in addition to free email accounts such as 10 GB of cloud storage service, Yandex.Calendar, and search engine. Like Google, your Yandex email account allows you to access all of these services with a single login. Interface for Yandex Mail is very nice to work with. It's easy to read and provides a very simple layout, while keeping all the necessary tools intact. Like most of the other email providers on this list, Yandex. Mail supports email filters, import and export links, tasks, and hotkeys. However, it's also unique in many ways, making it one of the best free providers: They will be sent as attachments. You can import files directly from Yandex. Disk.Images can be imported into an email at their URL. It is possible to download emails as EML files. Emails can be sent for delay. You can receive notifications when a message is sent and even remind you later if you don't receive a reply. There are also dozens of themes you can choose to instantly convert the entire page. Some topics may even interact with, for example, a Weather theme that shows the local weather under your mail. You can add other email accounts to Yandex Mail if you prefer to read all your mail here. This means you can make a Yandex Mail account, for example, and just read all of them on Yandex Mail.You can make free email accounts with your site's domain. Email accounts created at the end of Yandex with @yandex.com. Sign up for Yandex Mail at the link below or follow these registration steps if you need help. Download for: The main difference between ProtonMail and other email services above is that this center is around encryption. The idea is that you can send mail without fear that people at ProtonMail, or anyone other than the recipient, can read the message. When you're ready to send an encrypted message, be sure to click this button before sending the email. That is, if you do not send a message to another ProtonMail user, in which case it is always encrypted. If you choose to encrypt a message, you can also set the expiration date so that the message is destroyed and cannot be read after the specified duration (the time begins when the message is sent). The maximum shelf life is two weeks (28 but you can also choose something faster, such as 1-6 days or 1-23 hours, or a combination of both (such as one day and four hours, or only one hour). If you send a message to someone who is not a ProtonMail user and do not specify the expiration date, the message will still expire after 28 days. Recipients who receive encrypted messages open a message by link asking for a password where it is decrypted and displayed in the browser. They are reply via encrypted channel using the same message they decrypted and don't even need to have a ProtonMail account. Another ProtonMail privacy feature is to confirm a link that helps protect against phishing attacks by displaying a pop-up when you select a link, allowing you to confirm where it's going before actually going there. You can choose your @protonmail.com or @protonmail.ch e-mail address. To remove the restrictions mentioned above, you must pay for ProtonMail. Download for: While Zoho Mail has a free email service, Zoho is generally like an online set of several apps that are in the center around business use. The first thing you might notice about Zoho Mail when comming a message is how minimal the design is, which can be a wonderful thing. When you make a new message, you can quickly switch between a new message and the rest of the mail through the small tabs at the top of the page. Streams is a feature in Zoho Mail that makes it easy to create groups where you and members of your team can interact with shared messages and attachments. It works a bit like a private social media site. Zoho Mail also has these features: All standard creation tools are included in Zoho Mail, but you can also add images from Zoho Documents, Google Drive, OneDrive, Box and other services, and include tables in your messages. It's easy to take new notes, tasks, calendar events, contacts and bookmarks in Zoho Mail because it's closely linked to some of these other Zoho apps. You can customize a lot of what you see on the page. Keyboard shortcuts are supported. You can use filters in this e-mail service. Vacation responses allow you to send emails when you're not there. You can add custom domains to the Allow list and/or block list. All Zoho mailing addresses end as @zohomail.com. Download for: The main difference between Mail.com and other providers in this list is that you can choose between more than 200 free domains. Instead of getting stuck with a friend like @outlook.com @gmail.com, you can choose from a huge list. Email domains are categorized into sections, so it's easy to find one that applies to certain jobs, hobbies, technologies, and music. There are also the U.S., the world and spiritual domains. The best options are mail.com, email.com, usa.com, myself.com, post.com, dr.com, techie.com, engineer.com, cheerful.com and writeme.com. After you create an email account, you can create up to 10 aliases that work with your primary address. For example, if you were to build doglover.com address as the primary address and then use asia.com address as an alias, any messages sent to any will go to the mailbox doglover.com folder. The extreme flexibility of choosing a custom domain name for your email address is great, but it's about a single perk. There really isn't much else to glad when it comes to creating an Mail.com email account.... You can connect other e-mail addresses to send and receive these messages using Mail.com.There is a built-in email filter. You can access your calendar to track events. File storage takes up to 2 GB of free space. Attachments can be up to 30 MB in size. Mail.com uses the same interface and features as GMX.com. You can also create an email account with GMX, but you're only given the option to finish it at @gmx.us or @gmx.com. However, you get unlimited storage space with GMX. Download for: Tutanota (Latin for tuta nota, which means safe message) is similar to the ProtonMail service above, in that it automatically encrypts all your emails. However, you can disable encryption if you want. One of the first things to stand out with this email service is that you can't continue creating an account until you make a really secure password. Some places strongly encourage you to make your password stronger, but still accept it; Tuanota demands it. The web interface is really easy to use and provides nice menu transitions that really combine mail folders and email settings. By sending messages to non-Tutanota users, you can make them password protected or keep them unencrypted. If you select a password, the recipient will receive a custom link to open the message where you want to enter a read-and-reply password. Probably the most recent feature of this is that when a Tutanota user responds to a user who does not use Tutanota, the messages are still contained in a temporary account. This means you can have feedback from any other email service and they can keep the link even after the email is sent. Even though it's not as well known as Gmail, Yahoo, etc., Tutanota still supports this: You can make an account with any of these domains: tutanota.com, tutanota.de, tutamail.com, tuta.io, keemail.me. Download for: iCloud Mail is an interesting email service because many people don't even realize they're just a few steps away from being one. It is for this reason that iCloud Mail is one of the best email providers: for most people, they can tune in seconds. However, iCloud Mail is only available to people with an Apple device, so while many people have an iPad, iPhone, Mac, etc., not everyone does, so unlike other services on this list, it's very restrictive. Once you've made an iCloud account, you can log in from your computer and access the product package in addition to your mail, notes, reminders, photos, iCloud Drive content, contacts, calendar events, and anything else that has been synced to iCloud from your iOS device. The iCloud Mail part of iCloud is not super advanced and probably won't serve you well if you want many options in your email. Mail. it's very easy to set up for Apple device users without having to go through the often boring process of adding your name, choosing a password, etc. All of this works well with your existing Apple ID. You can access it by using IMAP. Support for keyboard shortcuts. All mail sent to your iCloud Mail account can be configured to automatically forward to another address. Files up to 5 GB in size can be emailed via iCloud Mail via Mail Drop, which essentially sends links to files stored on your iCloud Drive.It's easy to unsubscribe from emails in just one or two clicks. iCloud Mail accounts end in @icloud.com. You can then log into iCloud on your computer via your Apple ID and then open Mail to access iCloud Mail. 10 Minute Mail is by far one of the best email services if you need an email address right now, temporarily, and without having to go through all the typical user registration steps. Just as the name suggests, 10 Minute Mail isn't really a full-fledged email provider because it gives you an account in just 10 minutes. However, we added it here because it's absolutely perfect for the times when you need a temporary email account. Instead of providing the basic email you use for everything else, connect a one-time address with 10 Minute Mail. You'll get emails just like a regular email account, but it's not related to your identity at all, and when the time runs out, you don't have to worry about closing your account, deleting emails or anything – just go off the page or let the time run out. 10 Minute Mail is perfect for times when you're just testing the service and don't want to receive emails in your regular inbox. It's also useful if you share your email address with someone you don't trust. This is a valid email account that you can receive confirmation emails to and can reply to, but it disappears after 10 minutes. Of course, you can use 10 Minute Mail for longer than 10 minutes if you need to, but you'll have to use the button on the email page to reset the clock before 10 minutes is up. Up.
