The company lost billions of dollars between 1980 and 1982. Until 1988, the company was transformed into one of the most successful corporations in the United States. Describe what happened and then check how it happened. The main goal is to look at the big changes in the huge organization and how the changes were made. Related topics: Newsletter Promo summaries and excerpts from recent books, special offers, and more from Harvard Business Review Press. Are these fans and misters to stand by? Jennifer Lopez is set to take the Super Bowl stage in Miami this weekend, and fellow Latina sensation Shakira will join her in a halftime performance that is sure to be just as exciting as the game itself. As one of the original multi-hyphenates, J.Lo has consistently delivered epic performances on stage, on screen, and on the red carpet. Her style is very glamorous, always elevated, and only then a little daring. She is an indisputable fashionista who just seems better with age. J.Lo has been so central to the entertainment world over the last 20 years that we can often make her cultural impact on the world. After all, we're talking about a woman who singlehandedly contributed to the creation of Google Image Search with her Versace dress. In the years since Dress, Jenny from the block continued to build on her reputation as a trendsetter and sartorial risk handler. And she helped make her unique brand style available to the masses: She recently worked on a collaboration with fast fashion retailer PrettyLittlething and celebrity eyewear favorite Quay. In 2019, she received the American Fashion Icon Awards for fashion designers, who secured her place among the fashion greats. From the infamous Versace dress to her music video, which has cemented into pop culture history, and her countless iconic red carpet moments, Lopez's style has always been a standout. ctda said in a statement. Lopez also pioneered a business model turning her beauty and style into that brand. With its fashion, beauty and perfume lines, jennifer lopez brand has so far grossed over a billion dollars. While it's virtually impossible to choose just a handful of our favorite J.Lo looks all the time, we're determined to give it a try. Ahead, we've selected some of the highlights from her very long (and impressive) red carpet repertoire. This article was originally published on Feb 2, 2020, keeping up with the latest daily buzz with the BuzzFeed Daily newsletter! Keep up with the latest daily buzz with the BuzzFeed Daily newsletter! Jennifer Jones DVM Jennifer Jones received her Bachelor of Science in Biology with a minor in chemistry from Converse College in 2007. She worked as a small animal technician a few years before starting veterinary school. In 2014, Jennifer received her Veterinary Medicine Doctor, which focused on epidemiology and public health from the College of Veterinary Medicine at North Carolina State University. During the veterinary school, she worked on projects such as import risk assessment and passive monitoring of multi-country outbreaks of zoonoses. In addition, she has research experience with protein production, purification, in vivo protein function tests and determination of half-life smoke. Dr. Jones joined the FDA in 2014, working mainly on a jerky pet treat investigation. This led to her current state of Vet-LIRN, where she continues to study reports of adverse events on possible bacterial, nutritional or toxicological issues with animal feed. Research by Dr. Jones is a Veterinary Medical Officer with Vet-LIRN, a special program created by the FDA's Center for Veterinary Medicine (CVM) in 2011. Vet-LIRN coordinates facilities, equipment and professional expertise of state and non-governmental veterinary diagnostic laboratories across the country and Canada to respond to high-priority chemical and microbiological feed/drug contamination cases. Dr. Jones is working with laboratories, citing veterinarians, and animal owners to investigate cases of possible food-borne diseases in animals. Each investigation is different and adapted to the current case. Dr. Jones reviews animal medical records, obtains a dietary and environmental exposure history, and requires diagnostic samples (such as blood, urine, tissue, and occasionally animal feed) for possible testing. Vet-LIRN may examine diagnostic samples of bacterial contamination (e.g. culture, antibacterial susceptibility of isolates and whole genome sequestration), nutritional problems (e.g. thiamine deficiency, vitamin D toxicosis) and toxicology testing (e.g. pentobarbital, heavy metal. See our video for more information on how Vet-LIRN helps the FDA identify potential animal feed problems. Dr. Jones is currently reviewing medical history and exposure information to identify potential risk factors or common clinical trends associated with developing and, in some cases, recovering from augmented cardiomyopathy. She continues to evaluate aminoaciduria, a marker of renal Fanconi syndrome, and how different aminoaciduria profiles can relate to different stages of clinical FS disease. These data can help Vet-LIRN identify possible pathogenesis of the disease and identify possible predispositions to FS development. Jones JL, L Wang, O Ceric, SM Nemsler, DS Rotstein, DA Jurkovic, Y Rosa, B Byrum, J Cui, Y Zhang, CA Brown, AL Burnum, S Sanchez, R Reimschuessel.
