Youtube to ringtone android app

Changing your phone's ring ing is one of the first forms of customization in your phone history. Online communications are starting to make calls less common, but it's still great to hear a personalized phone tap when someone calls. The process isn't very straightforward though, so let's show you how to change your android music and notification sounds. There are several ways to do this; some methods are free while others are paid for, so be sure to find the one that best suits your needs. Let's start with the paid ones, which tend to be much simpler. Also: These are the best apps for notification sounds and tapsHow to create an Android phone touch:Convert a musicTrimming audioNotification sounds Editor's Note: Keep in mind some of the instructions in this guide are based on the stock version of Android 10. Different manufacturers configure their user interfaces in different ways, and exact processes may be slightly different on your device.1. Turning any song into a Touch Create a phone tap isn't as complicated as it used to be. You can use any regular mp3 file, but Android will also support other formats like OGG and WAV. This makes creating your own phone touch music a breeze, and you can grab these files from any music store or service you use, including Google's own Play Music.Set a custom tap on new Android devices:Download or transfer the music you want to set as your touch to your phone. This can be done via USB, direct download or any cloud storage solution of your choice. If you use a service like Google Play Music, just download the mp3 file to your device. Open the Settings app. Go to Sound.Select Advanced.Hit Phone ringtone. Go to My Sounds.Se your touch does not appear, hit the + button in the lower right corner. Find the music and tap it. Click Save.Set on older devices:Download or transfer the music you want to set as your ring to your phone. Using a file manager app, move your music to the Ringtones folder. If you connected your device to a computer via USB, you will be asked how you want this connection to be handled, so choose to explore files and folders. This will make your phone's storage look and work like any other folder on your PC, so you can just copy and paste the file directly into the Ringtones folder. Open the Settings app. Select Sound & Notification. Tap the phone tap. Your new touch song should appear in the list of options. More: How to set up mobile hotspot on your Android2 phone. How to trim your phone tap music You may not want that music starts from the beginning of the song. To choose your favorite section, you need to trim the audio, which requires some specialized software. Professional audio editors probably don't need much help with paid software like Adobe Audition, Reaper or Pro Tools, so we'll offer guide guides simpler and freer solutions. How to cut touch music using Audacity (MacOS, Windows, Linux):D dry, install and launch Audacity.Go to File > Import > Audio.Find and select the touch music. Use the selection tool and cursor to highlight the portion of audio you want to keep as your touch music. Once a section has been selected, you can press Space to play just that role and make sure you like it. Now click Edit > remove > audio cutting > specials. Only the selected section will remain. Press f5 to activate the time shift tool and drag your audio to the beginning of the timeline. I would also advise using Fade In and Fade Out at the beginning and end. These options can be accessed by going to the Effect menu. Now go to File > Export and select your preferred format. I would use mp3. Move the file to your smartphone and follow the tutorial in the section before turning it into a phone tap. Alternatively, you can use an audio editing app directly from your smartphone. Search for audio editor in the Google Play Store and you'll come up with a multitude of options. We like the Music Editor for its simplicity, but it also helps that it's free. You can pay to remove ads, but this is optional. How to trim music using Music Editor (Android): Download, install, and start music editor from the Google Play Store.Tap the Trim Audio option. Select the song you want to turn into a phone call. Drag the sliders to select the part of the song you want to keep as a touch. Green is the beginning and the red at the end. You can use the media controls at the bottom to get a preview. Press the floppy icon in the upper right corner. Select a name for the new file. Hit ok. Now follow the tutorial in the previous section to turn it into your phone touch. How to trim music using a website editor:You may not even need specialized software! There are many online tools that can do the job. One of them is mp3cut.net, and the process is super simple as well. Open your browser of choice and go to mp3cut.net.Select the Choose file button. Find and select the music file you want to trim. Let the site work its magic for a while. Use the left and right sliders to select the area you want to keep as a phone ring. Choose whether you want to disappear in or out. Also select the duration of your fade. Hit Cut.Select Save.Transfer the file to your phone. Follow the steps in the first section of this article to set audio as your touch music. Also: How to print from Android3 devices. How to change notification sounds on AndroidYou probably hears notification sounds often than touches, so you may also want to customize this audio. Notification sounds can be created the same way you play. You just have to follow the instructions below once you are ready to choose your notification sound. Open the Settings app on your Android phone. Select Sound.Tap Sound.Tap Advanced.Hit Default notification sound. Select the clip you want to use as a notification sound. Hit Save.Need more tutorials and how to do? Here are some great tips and tricks to improve your Android experience!
