Tractrix horns are redesigned using circular horn throat paired into the mouth of square horns to further improve high frequency response and expansion, while enhancing imaging and dynamics. Making rubber compressed mold adds high frequency mirping to reduce roughness and improve detail. This creates the cleanest, most natural sound possible. Cerametallic woofers maintain exceptional rigidity, and lightweight construction, to break minimal cones and distortions. When paired with the compression driver loaded with tractrix horn, it provides the most speaker performance in your class. Each 10 woofer features heavy cast aluminum frames for operation without resonance. In addition, each wafer includes a dual shortening ring magnet structure design to eliminate magnetic flux modulation and thus improve the linearity of cone movement. Key features: The all-new 1 3/4 Titanium Dual Compression Driver 10 cast is the new Woofers Cerametallic product basket, originally packed. Kolumny stereo dzielą się na podłogowe oraz podstawkowe. Dobór wielkości kolumn zależy przede wszystkim od wielkości pomieszczenia. W pomieszczeniach do 10m kw warto dobierać kolumny podstawkowe. W przypadku pomieszczeń do 20m kw sprawdzą się zarówno większe podstawkowe jak i podłogowe. W pomieszczeniach o powierzchni 30m kw i więcej polecamy większe kolumny podłogowe. Zdecydowana większość kolumn produkowana jest w ramach jednej linii, na którą składają się kolumny podłogowe, podstawkowe (często z uchwytymi do podwieszania w komplecie) oraz kolumna centralna – stosowana do kina domowego. Uzupełnieniem powyższych produktów są subwooferы, które podobnie jak kolumny stereo mogą w znaczący sposób różnić się nawet w tym samym przedziale cenowym. Zazwyczaj w ramach systemu stereo istnieje możliwość dołączenia subwoofera i stworzenia zestawu 2.1, który może być także traktowany jako podstawowe kino domowe z możliwością rozszerzenia o kolumnę centralną oraz kolumny podstawkowe – jako tylne głośniki efektowe. Dobór kolumn do wzmacniacza powinien opierać się na 4 czynnikach: - impedancji kolumn i wzmacniacza - mocy kolumn i wzmacniacza - barwie dźwięku kolumn i wzmacniacza - preferencjach muzycznych klienta. Aby jak najlepiej dobrać kolumny do skontaktuj się z naszą obsługą. Construction: Information that is speaker 2, 2.5 or 3-way mostly coincides with the number of speakers, but it doesn't have to be. You can find speakers working concurrently on a track and reproducing together the same range band. Most solutions are popular, where two midwoofers, midrange or woofers operate parallel to a track in a large generality, it's about allocating bandwidth for individual speakers on speakers. 2-way construction: Speaker transmitters need a booster signal to operate. Most speakers have passive constructions that connect via cable with external amplifiers. Some speaker sets have built-in amplifiers, usually for the low frequency section. Then only mid and tweeter transmitters should be fed to the amplifier. Such constructions are known as speakers with built subtitles. Active speakers are fully nourished by the built-in amplifier. So they just need the source signal. Active speakers are mostly computer speakers, subtitles, wireless Bluetooth speakers or scene speakers. Source: RMS.pl passive information (booster required) drivers: the type of drivers (speakers) that have been used on the device. The most popular drivers are dynamic, but in advanced construction some manufacturers - such as HiFiMAN, Martin Logan, Focal, etc. - there are other types, such as coaxial, electrostatic or - in IEM - armour drivers. Source: RMS.pl Dynamic Service Information Tweeters: 1x 1.75 Goods (44.5mm) Titanium Aperture Driver Compression Mid/woofer: 2x 10 Kali (254cm) Cera woofers Bass Reflex: Presence and Port Type Bass Reflex. This ventilation hole is in speaker housing through which part of the acoustic pressure emerges. Leads to low frequency responses and lower nonlinear distortions. If the bass-reflex hole is placed behind the speaker, it should be approximately 1 meter from the wall to release the open air. Source: RMS.pl behind passive membrane: The wireless speaker of the audio wire wire, under the influence of acoustic pressure inside the housing, moves during the work of the driver of low frequencies. An alternative way to optimize the bass-reflex port response. Source: RMS.pl no connection information: optional second pair of speaker connectors, enabling for separate low frequency connection and high frequency section. Source: RMS.pl Information Bi Wire (two pairs of cables - optional) Impedance: 8 Ohm Cross: Border frequency, which cross transmits signals between drivers. Source: RMS.pl 1.300Hz sensitivity information: specifies the sound level at a distance of 1m from the speaker, measured in the specific (standard) signal bringing at 2.83V. The higher the performance, the taller the column will be. The same signal from the amplifier. Source: RMS.pl 100dB Power Information Service (RMS): 250W Response Frequency: 32 - 25.000Hz Height: 124.5cm Width: 35.2cm Depth: 45.4cm Weight: 44.1kg Surround: Classic Warranty: 24 Months Klipsch is an American speaker company based in Indianapolis, Indiana Founded in 1946 in Hope, Arkansas as 'Clipsh et al', the company produces loudspeaker and enclosure drivers, as well as full-end speakers, high fidelity sound systems, public address applications, and PCs. The Klipsch RF-7 III Speaker features a dual 10-basket cast Cerametallic woofers, an all-new titanium compression driver, a 90x90 compact Rubber Horn Tractrix mold, redesigned double-horn cabinet and finished at a premium, furniture-grade wood veneer - RF-7-third-floor legendary speaker heroes, high-performance Klipsch sound. The new RF-7 III dual room has a new Dufourk enclosure that allows all 10 drivers and ports to work independently of the other. This improves the linearity of both drive systems and minimizes the standing wave problems inside the cabinet, which can cause frequency abnormalities at sensitive medium-range frequencies. Using Tractrix geometry, the new RF-7 III ports allow for the most efficient air transmission of cabinets - for the cleanest, strongest low frequency response on the market. The redesigned 90 degree x 90 degree tractrix horn tractrix horn uses a paired circular horn throat into the mouth of the square horn to further improve high frequency response and expansion while enhancing imaging and dynamics. The compact sculpted rubber structure enhances high-frequency mapping to reduce roughness and retrieve details. It produces the most vivid, life-like sound imaginable. The all-new 3/4 propulsion compression driver with titanium diaphragm includes fresh phase plugs to enhance phase cohesion in the horn gulf to improve linear acoustic pressure at high frequencies. Cerametallic Cerametallic Woofers represent the apex of Klipsch's driver strategy, maintain outstanding rigidity, and weightless construction for marginal cone fragmentation and bias. When combined with the tractrix horn driver loaded, it delivers high speaker efficiency in its class. Frame actors design every 10 woofer hosts durable cast aluminum coatings for performance without resonance. In addition, each woofer combines a twin short ring magnet assembly to remove the magnetic flux variation for a better linearity than passing cones. RF-7 III speakers use rocon-grade wood furniture and come in black ash, cherries or walnuts.
