More information: Splice (Ozone 9 Elements is free @ Splice until June 5th, 2020) More articles: 32-bit 64-bit free Mac Windows software We are happy to announce a new update to Ozone Imager, our free plug-in that uses ozone 9 technology to give you a quick and easy way to control stereo track width. In the new version we added a completely different stereoize mode that is smoother, more transparent and simpler at the low end, along with faster fluid measurement, flexibility and smooth, modernized UI. You're probably wondering how I get this thing for free? On... How to get a new Ozone Imager New version of Ozone Imager is free for all! But even if you already have the first version of Ozone Imager, you will still have to go to your account for your new license. Important note: The new Ozone Imager will be installed separately from the old version, so you won't experience any changes in existing windows. The new version will appear as Ozone Imager 2 in the plug-in list. Installation and Authorization Steps: 1. Click the button below to open the download page. You will be asked to enter an iZotope account e-mail. 2. After you enter the email and account password, you will be admitted to the download page. If you don't have an account, just create one and follow the steps below. You will get a serial number then and there, so you must copy it to the Clipboard. It will look like this, you can't miss: Serial number in the account section you will also get a follow-up email containing the serial number Ozone Imager, so don't worry if you miss it on this screen. 3. To install and approve Ozone Imager, follow these three simple steps: Choose which version of the download product installer, PC, or Mac. After you download, run the product setup program. After you run setup, load Ozone Imager into the host software. You will be prompted to allow a serial number. What's new in V2? In Ozone Imager, width control is used to increase or decrease the volume in side channels, giving the effect of expanding or narrowing the stereo image. What if there's no sound in the side channels? This often happens if you record a song in mono. The width in this case will have no effect when stereoize becomes useful — it creates an artificial stereo so that you can embed pages on the content of your heart! In the new version of Ozone Imager, the plug-ins have two optional stereoize modes, labeled I and II. Stereoize I is the original algorithm from the first version of Ozone Imager. With time-based processing, it separates the left and right channels, which naturally interprets your ear as a stereo. This effect is cool and often very handy, but it is also colorful and does not lend all sounds. Stereoize II uses a more transparent type of processing to create a stereo effect and is useful when you want to expand the image of a narrow percussion sound, such as bobn stoppers or surgically positioning the lateral vocals in the mix without sounding too processed. You may also find it works better for low sources such as bass, since Stereoize II gives a much more defined and articulating low-end response. Both modes are useful, so experiment to see which sound best fits your sound. Improved UI and Metering Here at iZotope, we put a lot of thought into measuring, present new and better ways to visualize different aspects of your sound and improve the responsiveness of the gauges for a nicer, more detailed experience. We've added this new liquid measurement style to Ozon Imager, which gives you a cleaner way to visualize stereo images and know if you've over-processed. We also made the plug-in fully customizable. The three Ozone Imager optional counters — Polar Sample, Polar Level, and Lissajous — help you see when your picture is too wide, oversized, or oversized. There's also a correlation meter that tells you when the sound is in phase or outside, which is very convenient when checking if you've made too much of a signal. You'll also notice that Ozone Imager has an all-encompassing facelift, with a modern new look and you feel inspired by the design of Ozone 9. The wide world of stereo Work in stereo and center/ side is a deep and complex theme, but knowing how it works unlocks a tone of options when mixing. This is what separates

beginners from not-so-beginners, and we have extensive information on our blog around the topic. Here are some articles for those who are hungry for more knowledge: Explore Ozone 9 Ozone Imager is a quick set and highlight CPU, so it's ideal to use on individual tracks in your mix. But it's just a taste of what our master suite Ozon 9 offers. In the standard and advanced version of Ozone 9, you can customize the stereo image in multiple frequency bands (multi-band bands), which specifically allows you to expand strings, centers, and high values. This makes the surgical tool ideal for working with complex sounds, like a full mixture. Ozone 9 not only includes beef Imager, it also includes a suite of 15 powerful mastering tools. You can control the dynamics, tone shapes with dynamic EQ, add distortion and tape saturation, check tracks by reference, and more. There's also a main assistant that analyzes your track and creates a unique custom preset tailored to your sound. If you like Ozone Imager, why not grab a demo ozone 9 and try it out on the next project? Project?
