## Woodlands middle school florida

The first and greatest battle when being the parent of a high school student is this: wrap your mind around the fact that your baby (emphasis on babies) will soon be thrown to the wolves – or at least a bunch of surly that seem to fill your child's future school. Since when do sixth graders grow sideburns? Ok. Stop breathing into that paper bag. Your child will be fine - it's you we're worried about. We know that, as parents, it can be difficult to see your baby grow up and become his own person. Watch them pile on the pressures of a new school, peers, exercise and homework, and that's enough to make you want to turn back the clock to simpler days - which involved rejoicing intrepid toddlers to eat broccoli. But that, my friend, was your first mistake. It's time to make your mental game move. If your child's foray into high school will be fine (and it is), then you should get your head in the game. And that means realizing your child is growing up and mapping out strategies to deal with it before the first day of school arrives. Survival Strategy Two: Sweet Freedom Independence Day. Junior high school kids are old for it but can't handle it too much, and you may not be ready to start letting go. The key is striking a healthy balance for both of you. One way to do this is to fulfill your child's desire for freedom (which is a natural developmental event, by the way) by allowing him or her to participate in a variety of approved activities. Playing on a basketball team, for example, offers your child an outlet for many things: friendship, physical activity and even peer pressure. Yes, peer pressure can have a good side. Just ask the tween who has failed pre-algebra, has been bent by the coach and let down his teammates. It won't happen again. Better yet, organized extracurricular activities offer your child the opportunity (supervised) to stay away from your wary eyes. But you can still participate by cheering at matches, clapping two innings or going to art performances. Anything that interests your child, gives him or her a way to explore it. Your role is to offer limitations, limitations, and support. One way you can practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to manage time, make choices and solve problems. Help your child set up the system - a place and time to study with the necessary resources - then let him overcome the challenges of high school homework without the presence Drift. Stay in touch with the teacher, even if your child assures you this is the least cool thing you've ever done. That's why some smart people find email – use it to send occasional queries about your child's performance in his or her class. Survival Strategy Three: Oh, Drama It's Hard to be a tween bent on a teen-hood. No No whether there is increased self-awareness (thanks, puberty), but there are also a number of new relational situations to deal with. When school turns into a fashion show or popularity contest, all this drama becomes a little dicey. That's because it's hard for parents to know when to intervene and when to let their son or daughter do things alone. We happen to agree with Joe Bruzese, author of the Parent's Guide to The Middle School Year, who advises parents to play a supporting role as a form of peer relationship and disband. Sure, we've been guilty of calling the girl's mother cruel and telling us, but we learned the hard way that usually doesn't help. Stay away from everyday friend dramas, but be willing to intervene if you feel your child is being bullied. Another minefield to avoid? Fashion. Set some obvious boundaries, such as a hemline length or waist stopping point, but be willing to let your child tell you what she's wearing. While teens are clamoring for friendship in close proximity to high school, they tend to try different styles. Personally, we don't start worrying until talk of tattoos and some piercings come into play. As you guide your junior high school students, remember: Your role is not one of perfection. Shake off nagging doubts about your self-esteem that can bubble to the surface the first time you accompany a high school dance. (Hey, it happened!) The key is getting involved, even when you allow your tween more autonomy. According to a Johns Hopkins University research report, when you're on the clue to the high school scene, your child is more likely to have better grades, attendance, and homework skills. Plus, they'll be ready for success in high school. Hyperventilating again? It's all right. You can put that paper bag down. We'll leave our high school discussion for another day. Page 2 Back to school means hoarding pencils, glue sticks, and other traditional supplies that have been kept by generations of children at tables, cubbies, and lockers. In primary and secondary schools, teachers usually provide a list of specific items to pick up; and even in high school, many instructors need this type of notebook paper, pen, and such. In addition to the classic supplies - crayons, notebooks, rulers - that continue to make this back-to-school list, there are also a number of others to keep in mind. Students currently have an arsenal of equipment and gizmos to help him manage his workload and improve his learning experience. Whether it's a fresh spin on a classic or new gadget, these five cool school tools make it a grade to make your son or daughter learn in style. Content Even pre-K students get the start of their computing capabilities with a learning laptop. For less than \$50, gadgets like this laptop can strengthen the basic skills taught in the classroom with fun and educational games and In their brief history, laptop learning now comes in handheld sizes with more advanced graphics and a wide range of software covering subjects including reading, math, foreign languages and more. Children can navigate many of these models with a keyboard, electronic stylus, or control pads with interfaces such as video game systems. For middle and high school students who need word processing skills and Internet access, netbooks are a great option. Priced at several hundred dollars, this mini laptop has grabbed the tech headlines for its usefulness and affordability. In fact, some schools are starting to take advantage of netbooks in the classroom thanks to their budget-friendly assets. Ads Finding the perfect backpack is essential for many school-age children. After all, they tote around with them every day and want to make a cool impression. Parents may care more about the toll the pack is doing on those young backs. Fortunately, there are alternatives out there to please both sides. Unfortunately, you may have to spend more cash in exchange for ergonomic qualities. To protect your back and spine, look for packages with plenty of padding. Padded straps and rear panels are a good sign. Make sure the strap fits the body, and the backpack is equipped with a chest strap for added support. When wearing a backpack, he should sit higher at the back than strain the spine by hanging on his hips. There are also rolling backpacks to choose from, but some schools don't allow them anymore. And they may reduce the important cool factors that your students demand. Advertising It's important that schoolchildren learn how to add, subtract, and so on in their heads – with the occasional help of their fingers and toes. But when higher math rolls around in junior high and beyond, it's time to pull out the big guns. Calculators have been a regular item in older children's backpacks for a while now, and they now offer more math and science help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage, and tutorial programs pre-installed on specific models. Students can also now choose from more aesthetic calculators, such as the bubble pink chart edition and the fire engine red starter model. Pencil and paper ads will never run out of style to take notes. But for tech students out there who want to get the most out of their recording ability, Smartpens are neat and relatively cheap at around \$150. LiveScribe's Pulse Smartpen writes on a special paper that digitally records what you write and where in the yard. At the same time, the pen can also capture audio, meaning that students can record and record lectures at the same time. That's when it was time to learn. Smartpen connects to the computer to download all the notes into one source. That way, students can place the Smartpen on a note on a special paper to hear the appropriate audio. If your students don't need that much technological magic, LEAP Frog's FLY Fusion Pentop Computer also digitally records what students are writing. The writing device then converts written notes into digital documents. Like LiveScribe Smartpen, Pentop also requires special paper. Since Pentop

doesn't store audio, there are plenty of thoughtful mP3 recording devices and audio recording add-ons for the iPod that can fulfill the functionality of Between Recording Ads, laptop learning, and backpack toting, children should do their homework. Whether it's solving difficult math problems, researching science exhibition projects or creating bibliographies for term papers, the Web has a lot of educational resources. But keeping track of the best of those resources can be challenging, and parents may be hesitant to release their children on the Internet. Fortunately, several companies have developed strong home helper programs for students of all learning levels. DiscoveryEducation.com, for example, provides assistance for seven different subject areas, along with interactive games and external Web links tailored to students for additional tutoring. At a monthly cost, Cosmeo by Discovery Education is a one-stop store for Discovery videos, scientific articles, step-by-step academic instruction, and more. By leveraging the breadth of valuable information online, children can improve their learning experience and continue to make A+ grades. Advertising Ads
