Buljan middle school rating

The first and biggest battle when becoming the father of a high school student is this: wrap your mind around the fact that your baby (emphasis on the baby) will soon be flung into the wolves – or at least the grumpy group that seems to populate your child's future school. Since when do sixth graders grow chops? Stop breathing in that paper bag. Your son's going to be fine. We know that as a parent, it can be difficult to see your baby grow up and become your own person. Watch them pile up on the pressures of a new school, classmates, sports and homework, and it's enough to make you want to turn the clock back to simpler days – the ones that involved persuading an intrepid child to eat broccoli. But this, my friend, is your first mistake. It's time to make your mind play go. If your child's foray into high school is going to be okay (and it is), then you have to put your head in the game. And that means realizing that your child is growing up and detaining a strategy to deal with it before the first day of school arrives. Survival Strategy Two: Sweet Independence Day freedom. High school students crave it, but they can't handle much of it, and you may not be ready to start letting go. The key is to find a balance that is healthy for both of you. One way to do this is to satisfy your child's desire for freedom (which is a natural occurrence of development, by the way) by allowing him to participate in a variety of approved activities. Playing on the basketball team, for example, offers your child a way out for many things: camaraderie, physical activity and even pressure from colleagues. Yes, peer pressure can have a good side. Just ask any teenager who has failed before algebra, was bankrolled by the coach and disappointed his teammates. That's not going to happen again. Better organized extracurricular activities offer your child a (supervised) chance to stay away from their attentive eyes. But you can still participate by cheering on the games, applauding a two-act piece or going to an art exhibition. What matters to your son, give him or her an avenue to explore him. Its role is to offer limits, limitations and support. One way to practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to manage time, make choices and solve problems. Help your child create a system, a place, and time to study with the necessary resources, and let him face the challenges of high school homework without his presence hovering. Keep in touch with teachers, even if your child assures you that this is the most not cool thing you've ever done. That's why a smart person invented email. Survival Three: Oh, the Drama It's hard to be a committed interpolation on teenagers. No No No there is greater self-awareness (thank you, puberty), but there are also a number of new relational situations to find. When school turns into a fashion show or popularity contest, all this drama gets a little risky. That's because it's hard for parents to know when to intervene and when to let their son or daughter handle things on their own. We happen to agree with Joe Bruzzese, author of *The Parents' Guide to High School Years*, who advises parents to play an adjunct role as peer relationships form and dissolve. Of course, we were guilty of calling the bad girl's mother and having our opinion, but we learned the hard way that usually doesn't help. Stay away from the drama of day-to-day friends, but be willing to step in if you feel your child is being bullied. Another minefield to avoid? Fashion. Set some clear boundaries, such as hem length or a waist stop, but be willing to let your child have some say in what he or she wears. While interpolations call for friendship in high school melee, they are likely to experience a variety of styles. Personally, we didn't start worrying until we talk about multiple tattoos and piercings come into play. As you guide your high school student, remember: your role is not perfect. Ask any annoying questions about your self-esteem that can bubble to the surface the first time you follow a high school dance. (Hey, it happens!) The key is to be involved, even when you allow your interpolation to have more autonomy. According to a report by researchers at Johns Hopkins University, when you are informed about the high school scene, your child is more likely to have better grades, attendance and homework skills. In addition, they will be prepared to succeed in high school. Hyperventilating again? That's reasonable. You can put that paper bag on. We'll leave our discussion in high school for another day. Page 2 Time back to school means stocking pencils, glues and other traditional supplies that generations of children have kept on tables, cubbies and lockers. In elementary and high schools, teachers often provide lists of specific items to pick up; and even in high school, many instructors require certain types of notebook paper, pens, and the like. In addition to the classic materials, crayons, notebooks, rulers, which continually make these lists back to school, there are also a number of others to keep in mind. Today's student has an arsenal of utensils and gadgets to help you manage workloads and improve the learning experience. Whether it's a new spin on a classic or a new gadget, these five cool school tools make the grade to make your son or daughter study great style. Content Even pre-K students can have an advantage in their computing know-how with learning laptops. For less than \$50, these handheld devices can reinforce the basic skills being taught in the classroom with fun and educational games and e- In its brief history, learning laptops now comes in portable sizes with more sophisticated graphics and a wide range of software covering subjects such as reading, math, foreign language and more. Children can navigate many of these models with a keyboard, tablet pen or control pad with an interface like a video game system. For elementary and high school students who need word processing and Internet access capabilities, netbooks are a great option. Priced at a few hundred dollars, these mini-laptops have picked up technological headlines for their usefulness and accessibility. In fact, some schools are starting to use netbooks in the classroom thanks to their economic assets. Advertising Find the perfect backpack is crucial for many school children. After all, they tote it around with them every day and want it to make a nice impression. Parents are probably more concerned about the toll the gang charges these young people. Fortunately, there are alternatives out there to please both parties. Unfortunately, you'll probably have to spend more money in exchange for ergonomic quality. To protect the back and spine, be ware of the packaging with a lot of padding. Padded handles and back panels are good signs. Make sure that the straps fit perfectly against the body, and that the backpack comes with a chest strap for greater support. When using the backpack, she should sit higher on her back instead of stretching her spine, hanging on her hips. There are also rolling backpacks to choose from, but some schools no longer allow it. And they can undermine that crucial legal factor that your student requires. Advertising It is important that school children learn to add, subtract and so on in their heads - with occasional help from their fingers and toes. But when the highest math rolls in high school and on, it's time to draw the big guns. Calculators have been a routine item in older children's backpacks for some time, and now offer more mathematical and scientific help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage, and tutorial programs preinstalled on certain models. Students can also now choose from more aesthetically pleasing calculators such as pink-gum chart edits and red beginner fire department models. Advertising Pencils and paper will never go out of style to take notes. But for technical students who want to make the most of their annotation capabilities, Smartpens are clean and relatively inexpensive at about \$150. LiveScribe Pulse Smartpen writes on specialized paper that digitally records what you're and where on the page. At the same time, the pen can also capture audio, which means that a student can take notes and record the lecture at the same time. When When time to study, Smartpen connects on a computer to download all notes from a single source. That way, students can place smartpen in notes on specialized paper to listen to the corresponding audio. If your student doesn't need so much technological magic, Leap Frog's FLY Fusion Pentop computer also digitally records what a student writes. The writing device then converts the written notes into digital documents. Like LiveScribe Smartpen, Pentop also requires specialized paper. Because Pentop doesn't save audio, there are many discrete mP3 recording devices and audio recording add-ons for iPods that can fulfill this Propaganda function Between annotation, laptop learning, and backpack toting, kids have to do their homework. Whether solving a difficult mathematical problem, researching a science fair project, or creating a bibliography for a term work, the Web holds a wealth of educational resources. But tracking down the best of these features can be challenging, and parents may hesitate to release their children on the Internet. Fortunately, some companies have developed robust home helper programs for students of all levels of learning. DiscoveryEducation.com, for example, provides assistance for seven different areas, along with interactive games and custom external links for supplemental tutoring. For a monthly fee, Cosmeo by Discovery Education is a unique store for discovery videos, academic articles, step-by-step academic instruction, and more. By using the breadth of valuable information online, children can improve their learning experience and continue to grade A+. Ad
