The best wifi hacker app on Android phones: These are the top recommended WiFi hacking apps for Android: Wifi Wps Wpa Tester: If you're a beginner hacker, I'd love to recommend this to you because you don't need to root your phone. The creators of this app initially developed it to know if an access point is vulnerable to malicious attacks or not. As time went on, developers began adding different features that allowed their users to hack a WiFi network with ease. In general, the app helps you crack a WiFi battery using algorithms such as Zhao, Aris, Dlink and others. These algorithms are responsible for calculating wifi legs throughout the MAC address although also in the local database. You must use Android Lollipop (4.0) or the higher version so that you do not have to root the phone so that it works. With this app, you will be able to try connecting to any WiFi hotspot through its WPS pin. WPS Connect: This is a powerful application that allows you to connect to most routers enabled with the WPS protocol. These WiFi routers are mainly found in homes and public places, it also makes it possible for you to analyze if your own router is vulnerable to attack or not. You can also use this app to learn wifi password hacking without rooting your device and strengthening your own network. It supports password cracking algorithms such as Dlink or Zhao and includes different legs. Once you've identified the accessible network, the app will help you get your password. It has mainly been tested with big Android brands like the Galaxy Nexus Series and more so it can be compatible with other Android phones as well. You can easily download it from the Google Play store to check if it's compatible with your phone. It is free to download, easy to use and possesses powerful algorithms to get production results. WiFi Master Key: This app is one of the best WiFi hacking apps available for free Android users. It is reliable, fast and safe and does not require you to root your phone as well as the previous two. With just one click, it searches for all nearby access points and WiFi networks. So all you have to do is choose only you want to connect and get its keys. Unlike other hacking apps, it doesn't actually hack passwords, instead, it shares it with users by identifying different networks from its directory.
