Sloan waterless urinal filter

WEST 7 Steel Tool SJS-19 Waterfree Urinal Cleaner Kit SJS-20 Urinal Cleaner Refill D58000-001 Water-Free Urinal Brush Heavy Duty Cartridge - Specification Sheet The pattern is the main component and is installed at the base of the urinal. A biodegradable sealer fluid is contained in the pattern. A barrier is formed between the drain and the open air by the liquid sealed, eliminating odors. The pattern is designed to collect uric sediment, the remaining liquid, which is non-corrosive and free of hard water, is allowed to flow into the drainage pipe. The result: no wasted water and an odor-free environment. Maintenance is carried out by replacing the pattern after 7000 uses with a provided key. WESTERN 150 Waterfree Urinal Cartridge Kit from Sloan The replaceable and biodegradable, liquid-sealed pattern filters fall off so that liquids penetrate the drain and sediments are collected for disposal when replacing the pattern to 6,000 to 7,000 uses. Multiplying each use by 1.6 liters of water (to compare with low-flow toilets) or by 3.5 (to compare with older units) shows a saving of 9,600 to 24,500 gallons of water. The Cartridge is designed to receive waste through drainates. Waste passes through an emissible layer sealed, continues through a Siphon StairCase System, and flows out through a patented baffle to prevent the loss of Sealed. A discharge tube in the housing directs the flow of waste into the building draining system. The Cartridge is designed as a replaceable component when its function is exhausted.
