Let's start with simpler things. And where does he find a foot in astronomy? If you take astronomy 101, the first thing the coach was saying to you is this: everything in this world is connected to the movement of the celestial body. These celestial bodies are planets, the sun, the moon, and all such bodies that their movement affects the universe. Everything in this universe is governed by the movement of planets, which subsequently grants each person a sign at birth. This is the same sign that a planet experiences at the time of the said person's birth. In astronomy, each planet gives its cue, but the early planet that ruled each other is the planet of the sun. When you tell someone, you're a visual; While all this goes down to the 12 zodiac signs that each planet goes to, there are moments when more than one sign is played out.
