Animal cell lysosomes centrioles

Centrioles are made up of microtubules in the cells of animals centrioles organized pericentriolar materials to produce microtubules, including mitotic core fibers Centrioles, presenting something of a puzzle: When there are present, there are satisfactory breaks, but without them, mitosis still occurs, but sometimes there are unsatisfactory results, Centrioles are absent from the cells of higher plants, but normal mitosis occurs and has a satisfactory effect. Important announcements, sometimes new information challenging current ideas, are replaced by other ideas as well as advances of knowledge. This is how science works, the British Society of Cell Biology (BSCB) seeks to provide official and up-to-date information, but cannot be held responsible for any loss of marks arising from the use of information on this website that may conflict with the accepted views of the audit agency.
