I used Odin to put on a 7.0 mi G920V and now all I can do is go 3G. I can't get a 4G LTE. You know what to do? Thank you very much for Vietnam! Page 2 ODIN wiped my entire phone... Wtf?!? No one is clean in this forum. ODIN's erasing the phone. Be aware of that. Well, yes. It's like flashing rum. It's not that hard to comprehend. I've been running it for a few days. There's nothing to talk about. It took me a while to update my sim. But other than that, everything's fine. ODIN wiped the size Wtf?!? No one clean in this forum. ODIN's erasing the phone. Be aware of that. Yes, it wipes your phone. You install a clean usually stock (factory) Rom. Just like factory reset. That's why it's important to do some research. Search Google for this question. Literally every top post says it doesn't wipe data lol. Don't lecture me about research. I asked the question here several times and no one answered. No one's answering my current question. Since the s6 is disconnected from Verizon, and I can't pull updates on how I could update my NY phone when the next update comes out and doesn't wipe. There must be a way to perform take... P. S my dirty flashes of rum don't erase data. Help My phone has no global space. I can't enter any APN settings. Can somebody help me? I'm new here, so I don't know if I've been sent to the right area. Is this pre-rooted? Or can it be rooted? I'm not ready to give up the ad for rooted phone for a free life yet, but I really want to see how this guy works at Nougat. Thanks for the part! Is there any way to do the G920VVRS4DQD1? 7.0 A few days ago, I upgraded to the G920VVRS4DQD1 7.0 on galaxy S6 from Verizon with my boot download blocked and wonder, Is it possible to do exactly in this version and on this device, I tried to make a root with a new file that I found on CF Autoroot, but it tells me to fail odin and on the device tells me Secure Check Fail: Recovery, and you know that blocked boot downloader I can't have a twrp, does anyone have a solution to my big problem? A few days ago, I did an upgrade to the G920VVRS4DQD1 7.0 on galaxy S6 from Verizon with my boot download blocked and wondering, Is it possible to do exactly in this version and on this device, I tried to make a root with a new file that I found on CF Autoroot, but it tells me to fail odin and on the device tells me Secure Check Fail: Recovery, and you know that blocked boot downloader I can't have a twrp, does anyone have a solution to my big problem? How many times are you going to ask the same question and I interrupted. Is it ever ready for you, Danno? No, it's bricked up. The phone hangs on Verizon's splash screen with the notification light tinting slowly. I have tried verizon software repair tool and have had a Samsung representative flashing on the phone with the same results. The next step is to send it for repair, but it is likely that they will not touch it, since the firmware is now custom when you enter download mode, because either a) the previous owner rooted in the phone or b) I tried to download the firmware again to try to solve the problem. Right now, I'm enjoying the fact that reliable HTC One M7. Can someone send instructions to flash this? I've been out of the game for a while and forgotten. Forgotten. To do it. Thank you in advance I flashed this and my phone has Korean telecom settings.... the setup panel is really slow and unresponsive when I open it. Page 3 Is it available on g920vvrs4dqe1? New May security patch? I have to install it manually if someone is... thx Root is available brother!! Still can't we root this structure? I feel so frustrated... I just need a Bron. I can guide you at the foot. It's very easy. You just have to flash it with one file that I have. Drop me a message in my mail at I will send you are going to do by rooting which apps you are going to install Because this version of Android works with Super dooper Cool Bro. I can guide you through the root. It's very easy. You just have to flash it with odin. But can U tell me what you are going to do by rooting Which apps you are going to install Because this version of Android works Super dooper Cool It probably won't work Im gets stuck in the USERDATA step; here is the log: <OSM>Enter the CS. <OSM>Check MD5 for MD5. If there is a link to the video, it is very useful Thank you for being available, is it in stock? Why does the android boot screen say custom when I download this firmware? The G920VVRS4DQD1 firmware is the one I refer to. Last Modified: July 14, 2017 Did it work for you? Don't you have any problems? I'm going to switch from 6.0.1. I'm from Mexico and I'm perfectly safe. Just do 1 thing... When you download the package, you will see various files (BI, AP, ETC). Then you put them all in Odin. So here's the thing: download the marshmallow package as well and just take the file with CSC at the beginning and put it in the Odin file with the nougat package, you only get 3G and 4GLTE is not okay. There's a little bit on my cell phone, I bought it, so I'll wait and don't miss the battery. All in all, no problem has given you Rum? Text messages or phone calls, according to speech. Looks like CF autoroot has already taken one for Nougat, but I'm not sure it's going to work. One question, if you were 6.0.1, did you have roots? What phone company are you using? I have Virgin Mobile, my mobile phone hasn't given me anything wrong because it's an official ROM. Everything goes to 100. This device cannot have a root folder, its boot charger is locked, and unless it is in version 5.1.1, you cannot get roots. I tried, but when I stepped on a mobile phone did not. I'm going to try this rum and follow your advice to get 4G. Thank you so much Reinstall with depot file Hi there because I install 7.0 with verizon tools I have battery life issues. I had the same problem a few years ago with s4, someone recommends flash it with its pit file and its works. Do I have a problem flashing this rum with a s920v pit file?. / Hey, since I installed 7.0 with verizon tool, I have problems with battery life. I had the same problem with s4 a couple of years ago, someone recommended me to falter it with a depot file And it worked. Would you mind flashing this rum with a 920v pit file? Page 4 I'm new here I have a few questions. BTW I use this phone on the Rogers network in Canada. 1) Is samsung's official approved version for 7.0 920V? Sammobile only has 6.0.1, but Verizon has been weighing 7.0 for months??? 2) Is downloading a 6.0.1 CSC file along with 7.0 really the only way to get LTE? If so, it makes me doubt what this 7.0 firmware really is. Verizon 7.0 will allow LTE's stock, right? Thanks will be fine. I'm from Mexico and I'm perfectly safe. Just do 1 thing... Thanks worked like a dream. I didn't know the windows had a smart switch and love that I don't have to rely on Odin loads. Sent to SM-G930W8 using Tapatalk I didn't know about it until yesterday. :victory: After blinking, the phone says it won't connect to the mobile network until I activate with Verizon, but the phone isn't in the U.S. and doesn't have a Verizon service. How can I fix this? Tengo Virgin Mobile, A mi el celular no me ha dado falla alguna puesto que es ROM Oficial. Todo va al cien, what are you? Este dispositivo no puede tener root, su bootloader está bloqueado y a no ser que sea en la versión 5.1.1, well it puede obtener root, Yo tengo 5.1.1 pero navegando en el post de CF auto root not veo el archivo, me puedes avudar? What about (NRD90M, G920VVRS4DOH1), Nobody talks about this, and it's the one I have. I have a Verizon Galaxy S6. However, the end case/number is not D1. It's H1, it's referring to Verizon's security update. Why hasn't anyone else talked about it being a problem for them? I can't root this phone because of the security update.
