The game has changed a lot since I wrote my first seven tips. The purpose of the original tips was to be able to quickly get smart new team members without having to repeat myself constantly. I stopped playing around level 24. The game is stupidly expensive. Three of my friends continue to play and I always interact with them. So while I think the comments below are great for level 16 and below the players, they don't really apply to level 18 and above - things have changed a lot. So I'm going to start writing some new tips. If you have a good tip, add it below in the comments to this section, and I'll publish a full blog about your tip, crediting you as well. There are a lot of visits on this page, so clearly people have interest. Edit Share Community content is available under CC-BY-SA unless otherwise stated. Aircraft carriers are your base's main fighting force. Warships and aircraft are useless without an aircraft carrier to which they are assigned. Content [show] AcquisitionDit Four carriers are rewarded as the game progresses. All others must be purchased with silver, gold or aircraft carrier shards. UpgradesEdit Carriers can be increased in level and class. The two costs of resources (uranium) and different materials. Some carriers can be evolved to a much stronger version. This is only available for money or for some cases for coins that can be purchased with money. ClassEdit The first class is white. When the aircraft carrier base reaches Lv. 10, you can upgrade your carriers to the green class. Next ist 'blue', then 'purple', then 'gold', then 'red'. If you are especially into these types of games (especially if you are playing casually on the go), this one is probably a good choice as it has two of the most basic requirements that any good MMORTS game should have; polished gameplay, and a massive population of players. Given that it has over 5 million downloads of google play alone makes it a very well populated game - meaning you'll never run out of co-players to play the game with. Battleship: The Naval Empire follows a post-apocalyptic scenario in which the world is reduced to a sea-flooded planet. In the process, the remaining human population are separated into clusters - trying to acquire resources for themselves to survive. Given the situation, he has created a world that is plunged into distress, panic and greed. The player in return - will lead one of these clusters that will try to survive, grow and overcome your adversities. Apart from inter-Battlefield wars, players also have the ability to play with PVEs or battles per system instance - which in this game would be put against pirates infesting the battlefield. And while the game setting and pattern choice might not meet everyone's preference, it's surely not so difficult for anyone to get a taste for this game. For the most part, it shares the same basics as the usual MMORTS games. Yet the basic objective of the game is to have you lead a new base, engaged in different activities that would eventually increase your power (efficiency in battle), and gradually progress in the game by improving your headquarters, your resource collectors, research and the things related to war, joining alliances, and of course, growing your own fleet. We have compiled quick references to the game, some valuable tips for beginners, and provided a basic list of the frequently requested about the game (and their most appropriate answers). To keep the guide up to date with the valuable details in the game Battle Warship: Naval Empire, you can also publish your own questions, and we will do our best to get you the answers. Welcome to the guide! We have relarted questions and answers about this which can also help you: Show all PrivatNur Mitglieder konnen die anderen Mitglieder der Gruppe und ihre Beitr-ge sehen.
