Upstar tv black screen

else. I see the power light shining so I know the TV is on and stay switched on. I can hear the sound even though the TV screen is black. My TV is a 654K SMART LED HDTV and the black screen has just started to appear. I'm not able to watch TV as the black screen is constant. Does this mean the screen or taskbar is bad? If the LED or LED flags, does the image flash and then the black screen constantly appears? What are some things that I can check myself before prompting for repair or warranty service? Tv Screen Is Black – You'll see no picture When the TV screen is black and no picture appears, it can mean a few different problems. Here's the easiest thing to check first to know if you have a simple problem or a problem that requires replacing parts on your TV. Black TV Screen Quick Test 1: First, try pulling out the TV MENU using the remote control or the MENU button on the TV itself. If the TV MENU appears, the problem comes from one of the sources or components. Black TV Screen Solution 1: This would mean that either the cable box, SAT BOX, COAX CABLE, HDMI CABLE, ETC may not work properly, something is free, or needs a reset. -Restore all components by disconnecting them for 5 minutes, including the TV. -Make sure that all COAX and HDMI cables are firm and properly connected. -If you can pull out the TV MENU when you have a black screen, update the FIRMWARE of the TV to make sure that your TV is up to date and to avoid the TV as a problem. NOTE: If the TV now works and there is no black screen, the problem was either a free cable, an old TV firmware, or a component that needs to be restored and the problem is now resolved. Black TV Screen Quick Test 2: Is the component you are using turned on and the INPUT TV is set correctly? Black TV Screen Solution 2: For example, if you are using Roku to watch TV... -Make sure that the ROKU or component is turned on. -Make sure that your TV INPUT is set correctly and set to the component you are currently using. -Switch to all TV inputs one at a time to make sure you have a component connected to the correct input. NOTE: Sometimes inputs are marked incorrectly, which can cause confusion. If, after turning on the component and changing the INPUT TV, the black screen is gone and the TV is working, the problem is now resolved. Black TV Screen Quick Test 3: After resetting and making sure the components are properly connected, if you still get a BLACK SCREEN, you may have the wrong COAX CABLE or HDMI CABLE. How to fix a black TV display 3: Try using or new cables for the component you are currently using. -Use -Use new COAX cable for SAT BOX and CABLE BOX. -Use the new HDMI cable for ROKU, AMAZON, DVD, BLU-RAY, X-BOX, PlayStation, etc. -Make sure there is no damage where the cables connect. NOTE: If after using the new cable the black screen is now gone and you can see the picture and sound, the problem is resolved and the problem was faulty cable. Damaged HDMI cable Damaged COAX cable – Bent pin If the above solutions did not work to repair the black TV screen, see below for other reasons that may be causing the problem. Other problems that may be caused by a black screen that will require the TV to be disassembling and replacing parts: IMPORTANT SAFETY NOTE – Turn it off before removing the TV, disconnect it from the mains and wait a few hours for the TV inside to drain to avoid shock. FAULTY TV PANEL 1 - If the TV screen is black, the entire front panel of the TV may be defective and therefore the screen is black and without an image. Find out if your screen is faulty or cracked and research to see if a new screen replacement is worth buying vs. getting a new TV. FAULTY PRINTED CIRCUIT BOARD IN TV 2 – Printed circuit board in the TV (T-CON BOARD, MAIN BOARD, BACKLIGHT INVERTER, LED DRIVER BOARD) may be faulty, has popping capacitors, or loose tape cable. If a bad board causes a BLACK SCREEN, the board will need to be replaced or the cap can be replaced if you know how to solder. Check the connections of all the plates inside the TV on the ribbon to make sure everything is connected and secure. Samsung TV Repair – Main BoardFAULTY LED IN TV 3 – If the LED TV flashes on the screen when you first turn it on and then a black screen appears, you may have a faulty LED or LED. There may be several LEDs that do not work behind the panel. FYI - LED replacement is the overall breakdown of the TV to replace strips of LEDs that are faulty. TV Repair No image No screen - Flashlight Test - Fix LCD LED TVIf you find that you have faulty printed circuit boards (T-CON board, main plate, backlight inverter, LED DRIVER BOARD), see below for the different types of boards that are available to repair the TV. If you have suggestions for other easier ways to fix a TV with a black screen, please let us know by leaving a comment below. Also, if you have a black screen problem with your TV and the above solutions didn't solve your TV, let us know by leaving your question below and we'll help you get your TV to work again.
