Phantom 2 dji app

This latest DJI software update kills my Phantom 2 more effectively than flying into the concrete wall at maximum speed. Like everyone else, I received a notice when I was strolling to shoot some overhead photos and videos on my local racing track that updates would be achieved in just 60 seconds. And, in just 60 seconds, my Phantom 2 cannot be used through no effort on my part. On a future date, DJI can choose to provide other software updates that can correct recent faux pas. Meanwhile, my Phantom sat in the dust of his carrier rally. Good job, DJI! BTW, my passion for upgrading to Phantom 4 is now lower than the Death Valley. Follow up. Thirty-one (31) reviews have now been provided for this application (as of August 23, 16). All 31 have received one star. If zero star ratings can be used, I'm sure all reviews will reflect a zero rating. The disaster version of the app was released on July 7, 2016. You will think 6 weeks will be enough time to release repairs or develop strategies to cancel the damage done to your customers. I obviously still believe in Santa Claus, Bunny Easter, fairy tale teeth, and government. DJI, however, I have lost nothing concerning me for your company and its products. It's going to be a really cool day before I do business with you again. Have you experienced cutting problems with your drones? Sometimes, you are ready to fly but DJI GO and GO 4 inform your plane Disconnected. Why is this happening? DJI GO connection issues may be caused by damaged USB cables, loss of remote control signal connections, poor device compatibility, and several other reasons. Troubleshoot problems quickly: Try with another USB cable. The USB cable can be damaged even if it looks good outside. Disconnect and reconnect your USB cable first. If it still doesn't work, test it with a different USB cable. This is a great way to use the original USB cable from DJI or that is included with your mobile device. Restart your mobile device and remote control. Try it with another smartphone/tablet. Using a DJI recommended mobile device? There are many iOS and Android devices available on the market, but not all of them are compatible with the DJI GO app. Make sure the page you use is compatible with checking the downloads on your drone product page. Update basic programs and applications DJI GO. Adakah anda mempunyai versi terkini DJI GO & amp; amp; GO 4? Adakah anda telah mengemaskini atur cara asas? Pastikan anda sentiasa di terkini dengan apl dan program asas DJI GO anda. Jangan abaikan pengemaskinian dalam aplikasi DJI GO. Bukankah mana-mana pembaikan cepat ini membantu? Kami kemudiannya menyediakan langkah-langkah penyelesaian masalah berikut untuk membantu anda menyelesaikan masalah sambungan anda ke Mavic Pro, Phantom Series, dan Inspire Series. By using, setting up or installing, users assume any liability that could cause Tanah1.How do I set up a Vision Ground Station? Vision Ground Station is integrated into the latest version of the Vision app (iOS: version 1.0.41, Android 1.0.50). Just pack the app now, open it and go to The District to activate the ground station. Accept the terms and conditions, then go back to the Camera mod, and drag your finger to the left to start designing flights with the ground station.2.What additional equipment is required? Not. Everything for flights with Required has been integrated into phantom 2 Vision and Vision+. All you have to do is make sure you do the latest version of the firmware (v3.04). Visit download the latest firmware and installation instructions. 3.What information do I need for the first flight with Vision land station? Note that your Phantom flew to the first route point in a straight line when taking off from the ground. Make sure there is enough space to achieve the desired height of your flight plan.4.What are the parameters to control with the ground station? 16 route points 200 m flight altitude limit of 5000 m maximum flight distance of 3 speeds: fast 8 m/s, medium 4 m/s, slow 2 m/s 5. What security instructions should I look out for? The height corresponds to the height on the ground and not to the height above sea level. Make sure your preprogram flights are set to sufficient altitudes to avoid obstacles. Use the ground station in the open space to ensure a strong GPS signal and avoid planning a flight route near the power line.6.How do I recover my phantom control if I want to cancel the flight schedule? Quickly pushed the S1 switch down and then returned to the GPS mode.7.My the phantom did not allow me to set the waypoint. Why? There are three reasons for this: 1. You may be in the no-fly zone above the airport (within 8 km of the main airport), or you may not have a GPS reception. Move out of the no-fly zone. 2. You do not have a GPS reception. Wait until your Phantom has a full GPS reception, which is at least six satellites. 3. You do not cached the card. Connect to the Internet and download maps for the area. 8.Is Vision Waypoints available for Phantom 2? The Waypoint Insights system is not available for Phantom 2, but you can use the more complex Land Stations app for Phantom 2. All you need to do is install DJI Data Link 2.4G Bluetooth: for Phantom 1/FC40 Vision Waypoints? The Vision line point system is not compatible with Phantom 1 or FC40.10.Is Naza Vision Waypoints available? The Vision street point system is not compatible with Naza or Naza-M, but Naza-M can be used with the ground iPad station.11.Why don't I see a map? An Internet connection is required to download the map. If you are flying in an area without an internet connection, you can previously, when looking at when there is an Internet connection.12.Can I view maps and live images of the camera at the same time? No, maps and cameras are on different pages.13.What is the red circle on the meaning of the map? This is an airport security zone. Flights to route points are not allowed in these areas.14.Are there target points (POIs) included in the system? The target point is not currently supported in the Vision.15 waypoint system where can I download maps from? Maps are automatically downloaded via Google Maps when you see a route point page, but only when you're connected to the Internet.16.Does Phantom now have follow-up features? Phantom does not have follow-up functions. However, you get the same impression if you program Phantom to fly along your route, and if you set the corresponding flight speed.17.What happens if the shipment fails during the mission? Phantom continues mission.18.What happens if a video image is interrupted during a mission? Phantom continues mission.19.What happens if the connection is interrupted while hovering? The Phantom remained hovering for 1 minute and then went back to the starting position.20.Switch S1 was already in GPS mode, but the Vision app always reported that I needed to be in GPS mode. Why? This error was caused by a dissent in the firmware. Please make sure you have the following firmware: Version 1.0.41 App, Camera 1.1.9 and Naza-M 3.04. 3.04.
