Best Watch boxes on amazon – Digital watch manufactured by Casio This article contains formulations that promote the subject in a subjective way without conveying real information. Remove or replace such wording and instead of making proclamations about the significance of a substance, use facts and attribution to demonstrate this importance. (March 2020) (Learn how and when to delete this template message) Casio F-91WCasio F-91W-1 watch with a plastic case and resin strapManufacturerCasioTypeQuartzDisplayDigitalIntroduced1989[1] The Casio F-91W is a digital watch manufactured by Japanese electronics company Casio. Introduced in 1989[1] and modeled after the 1984 DW-240 model, it is popular for its low price and long battery life. [2] Annual production of the watch is 3 million units per year. [3] History Release Date controversy Wikipedia article for F-91W watch has received attention from KSNV for an incorrect release year that spread in the article through circular reporting. The article, since March 2009, reported an incorrect release in 1991, which was repeated in a BBC article suspected of sourcing dates from Wikipedia. The BBC article was then cited as a source for the release in 1991. Personal communication with primary sources repeatedly certified a release year of 1989, but a dismissal of the communications proscribed original research in favor of the BBC citation led to the false release year remaining. [1] The false year of publication was corrected in 2019, citing KSNV's article on the controversy as the source. Specifications Design Designed by Ryusuke Moriai as its first design for Casio,[4] the case of F-91W measures 37.5 of 33.5 of 8.5 millimeters (1.48 of 1.32 of 0.33 in) and weighs 21 grams (0.74 oz). The case is primarily made of plastic, with a stainless steel caseback and buttons with the manufacturer's module number, 593, stamped on the caseback. The resin strap is 18 millimeters (0.71 in) at the assembly and 22mm over the widest part of the heels. Features The F-91W is a chronograph, with a 1:100 second stopwatch with a count up to 59:59.99 (almost an hour). The stopwatch also has the function for marking the net and the split time (laps). Other features include a one-hour beep and a single daily alarm lasting 20 seconds and an annual calendar, with adjustment for unsupported leap years because the clock doesn't record the year. February always counts as 28 days. [5] The watch uses a dim, green LED backlight located to the left of the display for lighting (in earlier versions it was an amber microlight). According to the manufacturer's estimates, correctly to ± 30 seconds per month. [5] The quartz movement, designated Module 593, is powered by a single CR2016 3-volt lithium button cell. Water resistance The front of the watch is labeled Water Resist.[5] but Casio reports different values for different variants of the watch. The black version (F91W-1)[6] is 30 meters / 3 bar (ie 100 feet / 44 psi), ISO standard meaning of which is: Suitable for daily use. Splash/rain resistant. NOT suitable for showering, swimming, swimming, snorkeling, water related work and fishing. But many F-91W owners have reported doing aforementioned activities without consequences. Use Casio F-91W, in regular timing mode and using the 24-hour display option. The watch is currently set to sound the alarm and the hourly clock is controlled by three side-mounted push buttons. The upper left button, labeled Light, lights up the light, interrupts the alarm, resets the stopwatch, or marks the split (lap time) time, and is used to select settings. The lower left button, labeled Mode, cycles clock modes: time display, alarm, stopwatch, and time/date adjustment. The right button, marked Alarm On-Off/24hr, is the function button: when used, it starts and stops the stopwatch, changes the settings currently adjusted, or switches between the 12-hour and 24-hour modes, depending on the current mode of the clock. Pressing all three buttons at the same time fills all cells on the LCD until a button is pressed again. [7] The time or date is adjusted by pressing the lower left button three times to get the clock to time adjustment mode. The upper left button is used to cycle through seconds, hours, minutes, month, date, day, and normal mode. The right button is used to adjust the blinking value that is displayed. Unlike all other values, the seconds can only be reset. Should this happen before 30 seconds, the clock will be zero at the beginning of the current minute. After 30 seconds, it will start the next minute as shown. When the adjustments are complete, the bottom left button can be pressed once to return the watch to normal mode. The clock display shows the day of the week, day of the month, hour, minute, seconds, and pm signs in the afternoon – or 24H (24-hour clock) – all the time, alarm status (bar of vertical lines), and hour signal status (double beep on hour, displayed as a clock) is present when activated in alarm mode. In stopwatch mode, minutes, seconds, and hundredths of a second are displayed. Use in Terrorism Additional Information: Seton Hall reports § Prisoners' profile This improvised timer for a time bomb was captured in the early 2000s. According to secret documents issued to interrogators at Guantanamo Bay, obtained[8] and released by the Guardian, the Casio F-91W digital clock was explained to 'sign off of and a contributing factor to the continued detention of detainees by the analysts stationed at Guantanamo Bay. Briefing documents used to train staff in assessing the threat level of new detainees advise that possession of the F-91W and A159W - available online for as little as £4 - suggests the carrier has been trained in the bomb-making of Al Qaeda in Afghanistan. [9] U.S. military intelligence officials have identified the F-91W as a watch that terrorists use to construct time bombs. [10] [11] [12][13] This association was highlighted in the Denbeaux study, and may have been used in some cases at the Guantanamo Bay detention center. [14] An article published in The Washington Post in 1996 reported that Abdul Hakim Murad, Wali Khan Amin Shah and Ramzi Ahmed Yousef had developed techniques for using publicly available Casio digital watches to detonate time bombs. [15] Casio watches were mentioned nearly 150 times in prisoner assessments from Guantanamo. [16] On 12 July 2006, the newspaper provided Mother Jones with extracts from the transcripts of a sample of Guantanamo detainees. [12] The article informed readers: More than a dozen prisoners were cited for owning cheap digital watches, especially the infamous Casio watch of the type used by al-Qaeda members for bomb detonators. The article quoted Abdullah Kamel Abudallah Kamel: When they told me that Casios was used by Al-Qaeda and the watch was for explosives, I was shocked ... If I'd known, I would have thrown it away. I'm not stupid. We have four priests[at Guantanamo]; all of them wear this watch. Variants Model Name Description F-91-WC Neon colors: orange, blue, green, pink, beige and yellow[17] F-91-WM Metallic case F-84W Japanese Domestic Market (JDM) model patterned according to the colors and text arrangement of the older F-15. Lugs instead of embedded strap. F-94W Circular icon arrangement in display W59 Waterproof up to 50 meters A158W, A159W, A163W, A164W Stainless steel band A159WGA-1 Stainless steel strip, gold color F-105W, A166W, A168WC, A168WEGM, A168WEM Equipped with electroluminescent backlight instead of LED backlight in other variants. Available in black color with a reado belt or in silver or gold colors with a stainless steel bracelet. Slightly different icon arrangement on display and a thicker case due to the backlight system. Some versions also have a negative display LA680 A smaller variant, marketed against women F-91-WS Translucent colors: blue, pink, white, and gray[18] Counterfeits Hold the right button for 3 seconds in main timing mode leading the display to view CASIO, which is useful for detecting a counterfeit model (applicable for newer models of the F-91W and its variants, including F-94W and A158W) Counterfeits of this watch are very common, despite its low price tag. These counterfeits have, in plastic build quality, LCD viewing angles are not as wide, beeps are higher and higher-pitched, and are significantly less accurate than the original. [19] The newer modules with the green LED can be tested by holding the right button for over 3 seconds in main timing mode; this will lead the display to display CASIO, as a test for authenticity. With developments in technology, however, some counterfeit models have also been developed to show this sign, although these are quite rare. This leaves the only method to distinguish them as assessing the overall build quality, timing accuracy, viewing viewing angle and print out on the screen.
