## Lakeland middle school md

The first, biggest struggle when becoming the parent of a middle-schooler is this: wrapping your mind around the fact that your baby (emphasis on baby) will soon be thrown at the wolves – or at least the gruff forest that seems to populate your child's future school. Since when do sixth-graders have sideburns? Stop breathing in that paper bag. Your kid's going to be okay, we're worried about you. We know that as a parent it can be difficult to watch your baby grow up and become his or her own person. Watch them pile on the pressures of a new school, peers, sports and homework, and it's enough to make you turn back the clock to simpler days - those who were involved in cajoling an intrepid toddler into eating broccoli. But that, my friend, is your first mistake. It's time to get your mental game moving. If your child's jaunt to high school is going to be OK (and it is), then you have to get your head into the game. And that means realizing your child is growing up and mapping out a strategy to deal with it before the first day of school arrives. Survival Strategy Two: Independence Day Sweet Freedom. High school students long for it, but can't handle it too much, and you may not be ready to let go. The key is to find a balance that is healthy for both of you. One way to do this is by fulfilling your child's desire for freedom (which is a natural development, by the way) by him or her to participate in a variety of approved activities. Playing on the basketball team, for example, provides your child with an outlet for many things: camaraderie, physical activity and even peer pressure. Yes, peer pressure can have a good side. Just ask any tween that has failed pre-algebra, is benched by the coach and leaves her teammates. That won't happen again. Better yet, organized extracurricular activities offer your child a (supervised) chance to get away from your watchful eyes. But you still get to participate by cheering at the games, applauding a two-act play or going to an art show. Whatever interests your child, give him or her a way to explore it. Your role is to provide boundaries, limitations and support. One way to practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to control time, make choices and solve problems. Help your child set up a system - a place and time to study with the necessary resources - and let them tackle the challenges of high school homework without your floating presence. Stay in touch with even if your child assures you that this is the most uncool thing you have ever done. That's why a smart person invented email - use it to occasionally send a question about your child's performance in the classroom. Survival Strategy three: Oh, the drama It's hard to get a tween bent on teen-hood. Not Not there is heightened self-awareness (thanks, puberty), but there is also a large number of new relational situations to meet. When school turns into a fashion show or popularity contest, all this drama becomes a bit dicey. That's because it's hard for parents to know when to intervene and when to let their son or daughter work alone. We agree with Joe Bruzzese, author of Parents' Guide to the Middle School Years, who advises parents to play a supporting role as peer relationships form and dissolve. Sure, we've been guilty of choosing the mean girl mother and having our say, but we learned the hard way that it usually doesn't help. Stay away from the day-to-day friend drama, but be prepared to step in if you feel your child is being bullied. Another minefield to avoid? Mode. Set a few clear boundaries, such as hemline length or a waistband stop point, but be prepared to let your child have what to say in what he or she is wearing. While tweens are crying out for friendship in the high school melee, they are probably trying a variety of styles. Personally, we don't start to worry until there's talk about tattoos and multiple piercings. As you accompany your high school student, remember: Your role is not one of perfection. Shake off any nagging doubts about your self-esteem that can bubble to the surface the first time you've been coaching a high school dance. (Hey, it happens!) The key is to be involved even if you give your tween more autonomy. According to a report by Johns Hopkins University researchers, if you're clued in to the high school scene, your child is more likely to have better grades, attendance and homework skills. Plus, they'll be prepared to succeed in high school. Hyperventilating again? It is ok. You put that paper bag down. We leave our high school discussion for another day. Page 2 Back-to-school time means stocking on pencils, glue sticks and other traditional necessities that generations of children have stowed away in desks, cubbies and lockers. In elementary and secondary schools, teachers typically provide lists of specific items to pick up; and even in high school, many instructors require certain types of notebook paper, pens and the like. In addition to the classic necessities -- crayons, notebooks, rulers -- that

constantly make these back-to-school lists, there are also a number of others to keep in mind. Today's student has an arsenal of utensils and gizmos to help him or her manage workload and improve the learning experience. Whether it's a fresh twist on a classic or a new-hit gadget, these five cool make the grade to let your son or daughter study in style. Content Even pre-K students can get ahead of their computer knowledge with laptops learning. For less than \$50, these laptop-like gadgets can enhance the basic skills being taught in the classroom with fun, educational games and and In their short history, learning laptops now come in handheld sizes with more advanced graphics and a comprehensive range of software that includes topics such as reading, math, foreign language and more. Children can navigate through many of these models with a keyboard, electronic stylus or control pad with an interface such as a video gaming system. For middle and high school students who need word processing capabilities and Internet access, netbooks are a great option. Priced at a few hundred dollars, these mini-laptops are grabbing tech heads for their utility and affordability. In fact, some schools are starting to use netbooks in the classroom thanks to their budget-friendly assets. Ad Finding the perfect backpack is crucial for many school-age children. After all, they tote it around with them every day and want it to make a cool impression. Parents are probably more concerned about the toll the pack is taking on those young backs. Fortunately, there are alternatives out there to please both parties. Unfortunately, you're probably going to have to spend more money in exchange for ergonomic quality. To protect the back and spine, watch out for packaging with lots of filling. Padded straps and rear panels are good plates. Make sure that the straps fit well against the body and that the backpack comes with a chest strap for extra support. When carrying the backpack, it should sit higher on the back instead of spanning spine by hanging down on the hips. There are also rolling backpacks to choose from, but some schools no longer allow them. And they can detract from that crucial cool factor that your student demands. Ad It's important that students learn how to add, subtract, and so on in their heads -- with the occasional help of their fingers and toes. But as higher math rolls around in the junior high and beyond, it's time to pull off the big guns. Calculators have been a routine item in the backpacks of older kids for a while now, and they now offer more math and science help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage and pre-installed tutorial programs on certain models. Students can now also choose from more aesthetically pleasing calculators, such as bubblegum pink graphic editions and fire engine red beginner models. Advertisement Pencil and paper will never be out of fashion for taking notes. But for the techie students out there who want to get the most out of their note-taking capabilities, Smartpens are neat and relatively cheap at about \$150. LiveScribe's Pulse Smartpen writes on specialized paper that digitally what you write and where on the page. At the same time, the pen can also capture audio, which means that a student can take notes and record the lecture at the same time. When it is the Time to study, the Smartpen hooks into a computer to download all the notes in a source. This allows students to place the Smartpen on notes on the specialized paper to hear the corresponding audio. If your student doesn't need as much technical magic, Leap Frog's FLY Fusion Pentop Computer also digitally records what a student writes. The writing device then converts the written notes into digital documents. Like the LiveScribe Smartpen, Pentop also requires specialized paper. Since the Pentop doesn't store audio, there are many discrete mP3 recording devices and audio recording add-ons for iPods that can perform that function Ad Between taking notes, learning laptop and backpacking toting, kids need to do their homework. Whether it's solving a difficult math problem, researching a science fair project or creating a bibliography for a term paper, the web has a wealth of educational resources. But tracking down the best of these resources can be a challenge, and parents may hesitate about unleashing their children on the Internet. Fortunately, some companies have developed robust homework helper programs for students of all levels of learning. For example, DiscoveryEducation.com offers help to seven different disciplines, along with interactive games and remote web links tailored for additional guidance. For a monthly fee, Cosmeo by Discovery Education is a one-stop shop for Discovery videos, scientific articles, step-by-step academic instruction and more. By leveing the breadth of valuable information online, children can improve their learning experience and continue to achieve A+ grades. Ad Advertising
