Skyrim open race menu command

ALL POSTSCan you modify your character among toys?hi, im relatively new to skyrim, I asked, can you like, go to a barber and edit your character's hair or something? (edited by a Fandom user) Character Creation (Skyrim)0You can only be if you have the danguard (I believe) DLC. It's a Bosmer in the Flagon ragged switch feature to your facial (editor by Goddy5890)0Yeah Dawnguard adds Galathil face to Sculptor and if you on the PC Console command will let you change everything at any time. (edited by AzuraKnight)0On PC, console command montreracemenu allows you to change anything in the race menu as you did it in Helgen. But be cautious, if you enter this code in open area, sometimes the game will crash. So you'd better into a small room. I suggest Dragonsreach because the lighting condition has good. If you play on Xbox or PS, it is only possible to change your face and body (except race) if you have to install the Dawnguard dlc. Go to the flagon ragged and find Galathil. It's a face sculptor and can change your face and body with a load of 1000 batches. But his technique only works on their lives. So if you're a vapor, you must heal your vampirism first. Galathil also shows up in PC version. (edited by SleepingII) I have the Elder Scrolls expansion package. Can I do it with that, and how? (edited by 0xVenusXx0)montreracemenu is strong and buggy doesn't use it I learned that the hard way if you're going to regret it doesn't save the changes rather it mess it up your character + add more backstage sources on its own just like that (edited by a Fandom user)0My dawnguard expansion won't work and I play on xbox 360 so there's any other way I can change my appearance? (edited by a Fandom user) On xbox as far as I know there is a mode called the Cheat Room which you can download, you go to the option of magic stuff and then you go to Alterations. Next you go to the chatched menu and discard it, then you scroll down and select the game script option, and THennn you select the Show races menu - you; (edited by a Fandom user) How do I open it and will it disable achieving? Wanted to rename my character. Open the console and kind of racemenu but it will change more than your accomplishments and name. Use a mode like the following to prevent this: But are you using the vanilla one disabled to achieve? Make use of the vanilla one, it will break your character if not your game. The correct console command is: montreracemenu more details on console commands here: Console Any version I use to freeze my pc to the point of power cut out of it. I love exploring the relationships between the fictional worlds we create for movies, books, games, etc. with the real world. Do you have second thoughts? Read on to learn how to change your character's appearance in Skyrim. With all the karakte personalization the available in Skyrim, it's easy to go further and choose an appearance for your character that's interesting first. . but quickly lost his calling. Changing your character's name and appearance in SkyrimIf you've already invested dozen hours of your character, earning a ton of gold, and fulfilling many requests, it's not unusual if you don't want to go back and do it everything else again with a new character just changed the way you look. Fortunately, there is a way to rename your character and appearance later in the game using the console. Read on to learn how. Note: You can also use this to change your sex if you want, just by changing your race! (See the notes later on.) Important You can only change your character's appearance and name if you have the PC version of the game. Before we begin, don't forget the number one rule of modding: Always make a new save before making any changes to your character's appearance or name. (The same applies to all console changes.) This will allow you to return to a working game save if for some reason your character changes cause any problems. How to Change Your Character Appearance to the console by pressing '~', located at the top left corner of standard North American keyboard. Type 'montreracemenu' in the console and hit Enter. This will pull up the character creation screen that you came across when you firstly created your character. Click '~' again to close the console so that you can start making changes. You can change anything about your character's appearance, including gender. Avoid changing your character's circuit, though, as it can demonstrate up your stats. (More on this below.) When you're done, just choose 'Do'. You will push to re-enter your character's name and the game will resume. How to rename your character you just want to rename your character, you don't need to make any changes to your appearance, just choose 'Do' and type your new name. Here's my character before changing his appearance. How to change your character's race you change your character's race, your status will also change. This is because every race in Skyrim has different strengths and weaknesses---that are reflected at different skill levels of different skills. Therefore, change your race should, in theory, change your skill level because your old modified racial proficiency will be removed and your new racial modified will be implemented. However, this is not the case. Instead, changing your race can result in these experiences: Mismatched experience and skill levels: Unfortunately, the Game does not automatically allocate your previous experience and the same skills that you've built up while playing, so your new skill levels won't match those that you were before. In fact, it seems just from dropping your entire experience of can also result in your level changing too. Losing particular race power that has race: Changing your race can also cause you to lose the race power to which you have had when you started the game, and won't necessarily apply to your new race. All in all, changing your race using montreracemenu is a bad idea. Warning changes your race change your stats! Use setrace and SetPlayerRace to change your RaceWhat on changing your race without using montreracemenu? You can use these console commands 'setraceraceId' or 'setplayerrace rasId' (you need to change race ID to the appropriate race, such as ImperialRace or KhajiitRace, etc.) to change your character's race. However, this has the unfortunate side effect of causing the game to forget where your top textures are located. The next time you load the game, yourself will be missing! Therefore, there is no way known for ever changing your character's race without causing a bug to some sort. Comparison scale: 0.5 1.0 and 2.0 Change your character's SizeThe weight allows you to adjust your character's build, but it doesn't give you any control over the character size. If you want to make your highest or shorter character, therefore you have to use the console. As always, use console commands at your own risk. How to Change Character Size to 'Console'~' and type: player.setscale x.x (where x.x is the scale you would like your characters to be placed in -for example, set your character scale to 0.98 will make them a little smaller, and 1.02 will make them a little higher. The default is 1.0.) Type '~' again to close the console when you're done. You can check the current scale of your character by typing player.getscale (you don't need to assign a number). Note: Don't go crazy with these settings because it's very easy to know the way your characters come out of proportion. (Unless, of course, that's what you want to do.) Usually adjusting them by .2 or .3 is enough to get the effect you are looking for. If you make your character too small or too big, you can run into gameplay issues. (For example, I put a 0.5 character and after a couple of minutes they started running really slowly.) Messing around with the console sometimes results in non-intended side effects. Don't lose yourself on it, though. Playing as a non-playable character response in a number of requests, I started downloading screenshots of the cursor settings for various NPCs from Skyrim.You can use these settings to make yourself look like another character from the game (tweaking them however you like, of course), or if you are a PC use the plugins or save files I created to play as one of these characters 'out of the box'. Just go to the Ragged Flagon and pay the creepy bed on the bench by the 1,000 Septims water. I recommend you not to change your race. You can always create a new save, change your race using that save to see what happens, and if it's completely collapsed, you can just delete the save. Be sure to write down all your stats first, though. It is possible to fix all your settings after changing your race using the console if you really die putting on it. You need to learn how to add/remove advantages, status changes, etc., which is too much to cover here. Go to the Official Elder Scrolls page (UESP) for information on changing all of this. I'm sure there are a lot of X360 users out there who will be happy to take advantage of that. :)Kensaimage on February 08, 2012:I should be clarified, but this glitch tested and rebuttaled successfully on the Xbox 360, current and last Skyrim's plate as of 02/08/12Kensaimage on February 08, 2012: Alright, I can do Justin D's glitch with a 100% success rate. I actually ran into it by myself by accident, and it took me quite a while to replicate the bug. Jisin is on the right track, but he lacks a few important steps. This is what has to be done, and I test it for days.1. Preset has to be the same, as Justin said2. Bean must be the same, as Justin said3. Sex, race, and preset, as JustinNow for that just didn't say4. All facial types must match the base model. For example, you have the second nose selected for the character you want to edit. To re-edit it, you have to select the same nose type or the glitch won't work. This goes for color, too, with hair and facial hair styles. Make everything match, but don't worry about the proportions backstage. Like the nose example, it has to be the same type, but you can shape it however you want with the proportion backstage.5. Eye color MUST be the same6. Scars must match. If they are present. I tested this and I found that ADDING A brand will cause the glitch to weaken, but adding warpaint CAN be done. I don't know why.7. Even the minute details MUST match. Same type of mouth, but leaky too. This includes mouth color, eye, and any eye shade, etc. barn, these are the keys to the puzzle. Obviously, due to everything that needs macth, the glitch is not too awful useful except maybe give your guy minor tweaks. thank you his eyes go up a bit tall, you can snip them, or snip down his nose or adjust his jawline, etc. You can't give it a circuit or add marks, but you can add warpaint. Final Details: The Game uses your original based model for any modifications. Transforming into a therapist and back will reset your face to what it was when you first did it, and becoming a vampire will do the same. Conclusion: You can tweak the face, but ultimately, only will be useful for the truly nit injection or for those who want to try out new warpaint. The WHIIICHH in and of itself is actually a kind of cool. I didn't test if removing the warpaint is possible. The change is permanent, and can only undo by becoming a vamp/herolf, OR loading before you save on a separate memory unit (flash drive), then your loading is other you save again after changing it back if you screwed up. Keep in mind the change will affect all of your saves with this character, even if the image on the save does not reflect the changes. So don't freak out, it's still easily reversible, and if you don't have a flashdrive, vampirism is easy to heal and can contract immeasurably. And yes, the guy who makes the rhythmic is immortal and can't die, and if you're a therapist, transform ONCE AND BACK AGAIN with your gold. Whenever you open your flow skin montreracemenu returns to default and be reset.@noname: I think the reason why your skin level changes have to do with the fact that each race receives different start bonuses, so the engines are trying to recalculate them. My hunt is that when you change your race it runs this code but at the wrong time so it doesn't do it well. It doesn't touch your advantage because no one starts with advantage so it doesn't have to recalculate anything.noname on December 25, 2011: Interesting enough your advantage remains after changing your race with montreracemenu. Just D on December 02, 2011: I played on Xbox 360 and found a glitch that allowed you to change your appearance on any character. What you have to do is :1. to make a save with the character you want to change2. load the first save in the game where you are still the north prisoner (before you customize your character)3. choose the same race, gender, preset, and weight as the character you want to change4. once you're done that, you can change the face however you want, by the name of your character. load the save you did in Step 1.Presto! Your personage will look like the one you've just done. I've done this twice now in a row and it worked perfectly every time as long as you start with the same preset and weight. Let's work on PS3, but I don't have one so I can't confirm.j-u-i-c-e-(author) from Waterloo, On November 26, 2011: @dane anderson: Skyrim doesn't give you an option after character creation like Oblivation made in from dungeon in tutorial and there appears to be any way to make it in-game, so short of them release it as a feature of a DLC I think you're out of luck. The store at a limited limit in Fallout 3 and Fallout: New Vegas but with the number of people who want to change it would be just a standard feature.damned anderson on November 26, 2011: I play on xbox 360, is there anyway changing it in there? cause i hit b on accents and canceled all of it and I didn't think it was a great deal at the time I thought I could change it, but so far I don't think you can :) so you think there is a way? or could they come out with it in the future? j-u-i-c-e -e (author) from Waterloo, on November 23, 2011: Grand Tip, Okita. Thanks for the on November 23, 2011: My advice is to write down all your skill levels, shout loudly, etc. even your health, magic and stamina levels... save this for later. Now, look online for the way to change the stats that are player.setav (skills) (number of desired skills) Write all of these things into one text (txt) file, one on each line. It will be kind of long because you need a line for each skill, your health /magicka/stamina bar and your resistance. I think that's all the stats he'll mess up. Once you have saved this as a worksheet you will remember (in .txt format) save it in your Skyrim directory in my computer. Right inside the skyrim folder. Loading up the game, going to the character who has now messed up all stats from changing races... type in the console command beat (file name) and enter. It will run through all the commands you entered in the text file and bring your character back to what it was before you change its race. Now if you ever want to change your character again, you just load that file up, update it to what you are now before changing... make your changes, then run this file again. The best solution I came with. And.
