Quantity: Add Cart Store by Appliance Type Store By Part Type Dishwasher Lower Dishrack Wheel Assembly - Grey PartSelect Number PS11722152 Manufacturer Part Number W10195416V This OEM grey Dishwasher Lower Dishrack Wheel Assembly is a plastic set that allows the rack to slide in and out of the dishwasher easily. If it breaks or gets damaged, sliding will feel difficult. This can happen due to normal wear and tear, and the part should be replaced if this happens. Check the model number and user manual to make sure this section is correct. It attaches directly to the barrel. To repair, open the dishwasher door and pull out the lower barrel. Then slide the tab from both sides and it should pop out. To install the new wheel unit, place it on the stand and make sure the caps overlap the cord from the inside before cutting it into place by sliding the wheel. It measures about 3x6 inches. Fixes these symptoms Door lock error Door will not close Noisy See more ... Installation instructions Thomas from WEST OLIVE, MI Broken wheel unit on the bottom barrel stand All you do is pop out the old wheel unit of two (2) points on the plastic wheel housing and insert the new one. Easy solution. Less than a 5 minute solution. Read more... SilverWare Basket - Grey PartSelect Number PS11743069 Manufacturer Part Number WP6-918873 This silverware basket is gray in color and measures 8 inches wide by 11-1/2 inches high by 12 inches deep. The silverware basket is used to hold small utensils such as forks, spoons and knives during washing dishes. The manufacturer has redesigned this section to be a complete, full basket with handles and covers. The basket comes apart in two pieces if you prefer to place them along the sides of the dishwasher instead of on the front part of the bottom barrel rack. To extend the life of this part, try placing utensils in the holders carefully instead of letting them in. Fixes these symptoms Door lock error Leaking noisy See more ... Installation instructions Cheryl from South Burlington, VT bottom stand needed to replace Just took it out of the box and slipped it in. The only problem I experienced and I think it was because of the age of the dishwasher, the newunit was not as deep as the original stand. This will require a new method of loading dishes. The new basket also does not fit well in the new stand. Still cheaper than replacing a good good Dishwasher! Read more... Rack Slots Stop PartSelect Number PS11746591 Manufacturer Part Number WP8565925 Stand Slot Stop on the dishwasher is designed to stop the dish rack in the right place when opening and closing the stand. If the dishwasher does not clean the dishes properly, the rack stop may need to be replaced. The spare part may differ slightly from the broken part, depending on the model. However, the different styles are interchangeable. This product is sold individually and comes in both a white and grey plastic version. Many of our customers found this repair to be very easy and takes less than 30 minutes to complete. Just snap the old part out and snap the new part into place. You don't need any tools to finish the job. This is an authentic part approved by the manufacturer. Fixes these symptoms Door lock error Door will not close Do not cleaning dishes correctly See more ... Installation instructions Steven from WASHINGTON, D.C. Upper rack wheels had begun to break off. Shoddy design and materials. I carefully followed the video instructions step by step. They were detailed, clear and pointed out how to avoid installation errors. Without video I would have been tempted to just figure it out myself - (Hey, I'm a handy guy. How hard can it be, right?). With the video, I sailed right through without stupid mistakes. The new rack adjustment wheel set is much more powerful than the whirlpool original. It made sense to get new rack stops at the same time. Thank you, PartSelect. Read more... Dishwasher Door handle and locking unit with switch partSelect number PS11748729 Manufacturer part number WPW10130695 This door lock (Dishwasher door lock unit, door lock unit, locking unit) is a simple on/off mechanism that prohibits the dishwasher from working when the door is open. It is located on the door of the dishwasher and is mounted on the inner door panel. The door lock may break from material fatigue. If the door is often switched or opened quickly, the lock may break prematurely. If the door does not open or the door switches are not activated, replace this part. This lock measures 5 1/2 inches wide, 4 1/2 inches tall, 2 1/2 inches deep, is constructed of plastic and comes in black. The kit contains the black handle, lock and 2 switches. Fixes these symptoms Door lock error Door will not close Leak See more ... Installation instructions Walter from Tucson, AZ Broken lock handle The hardest thing was to find out that you only need to buy the lock handle because it only comes as a complete lock assembly, why they even list the lock assembly as a separate part in the parts list stupid. (you get the handle and lock already assembled, and it costs less than the lock mounting without the handle). Whatever all you have to do is to discount the power of the dishwasher you like to live dangerously like me) take the drill with the right size torx bit and remove all the screws on the inside door pannel (the top middle two screws actually keep the lock mounting in place). Discount the 4 wires from the old part and reconstruct them to the new part and install all torx screws be careful so you do not strip plastic threads as they screw in if you use a drill. The whole process takes less than 5 minutes. I am surprised that Maytag used such a flimsy handle assembly in their dishwashers since they should have repair men with the most time on their hands. They probably sell as many handle units as they do dishwashers that have this special part in it, probably more since you probably need to change it 2 or 3 times over the life of the device. Read more... Mounting bracketPart select number PS11745496 Manufacturer part number WP8269145 The mounting bracket is sold individually, without screws. This part secures the top of the dishwasher to the underside of the counter or cabinet to prevent the dishwasher from moving, shaking or tilting forward. The bracket is made entirely of metal. It is recommended to check all brackets, if applicable, because they often use at the same speed, and both may need to be replaced. This is an OEM part that is taken from the authentic manufacturer. Tools needed are a pair of needle nose pliers and a screwdriver. Fixes these symptoms Door lock failure Door will not close See more ... Installation instructions Judith from Essex, MA Lost dishwasher brackets I called an experienced plumber, who balanced and installed my new dishwasher correctly, using the brackets I ordered from Parts Select, after an inexperienced plumber had written the factory-supplied mounting brackets out with the shipping carton. Relief! Read more... Dishwasher Drain pump Part select number PS11753379 Manufacturer Part number WPW10348269 This drain pump is used in dishwashers to remove water from the dishwasher tub. If the impeller in the dishwasher is damaged or the motor is shorted out and does not want to drain, it is possible that the body is cracked and causing leakage. To prevent this from happening, replace the drain pump. The tools needed for this installation are: Phillips screwdriver, 5/16 inch nut driver, 5/8 inch wrench and a flathead screwdriver. Remember to disconnect the dishwasher from the power source before starting this installation project. Refer to the manufacturer's manual for further installation instructions. Fixes these symptoms Leaking noisy Not cleaning dishes correctly See more ... Installation instructions Andrew from Alexandria, VA dishwasher not draining after washing cycle Caviat: The actual repair is less than 15 minutes, but I spent a lot of time playing with it until I found out that it was so easy and fast. You do not need to remove from the disk to do this. And it will probably help to look at the new part carefully, so you can understand where the holding clip is to press it and release the old pump. First remove the water from the dishwasher that is not drained with a wet/dry vac. Otherwise, the water will drain on the floor when removing the pump. Then remove the two screws on the kick plate on the front of the unit under the door. Remove the kickplate/maintenance access cover. The drain pump is to the right about 8 inches in. Using two hands, grab the drain pump with your right hand and use your left hand to push the fastening clip down. After that, the drain pump will rotate 1/4 turn counterclockwise and can be removed without pulling the dishwasher out. There is likely to be some water leak out that was fellled in the pump housing that you can not reach with vac. Disconnect the cord. Connect the cord to the new pump, replace it and turn 1/4 clockwise to install it. Replace the kick plate and you're done. Read more... Door balance Link Kit PartSelect Number PS972325 Manufacturer Part number 8194001 This part is a door balancing coupler, also sometimes known as door cable or door spring cable set, which helps support the door when opened and closed by connecting the dishwasher door hinges. The kit includes two door balance connectors and two door balance fasteners with wheels, which will replace both the left and right sides. The only tool needed is a 5/16 nut driver. Before removing the existing kit, note how the door balance connector set is mounted for a smooth replacement process. It is recommended to check the door springs in case they also need to be replaced. Fixes these symptoms Door lock error Door will not close Leak See more ... Installation instructions Scott from Fort Lauderdale, FL Replaced Hinge Link Pulled dishwasher from under the counter, attached link to spring, hooked spring back into frame/chassis, threaded link through pulleys, attached the other end of the connector on the door, reinstalled dishwasher under the counter. Everything's fine. Note-I bought an additional link in anticipation that the other will fail. They're cheap enough. Read more... Front track stop partSelect number PS11755805 Manufacturer part number WPW10508950 This stopper is attached to the front of the top dishrack slot. This stop keeps the upper stand from pulling out too far and falling from the slot. Installation instructions Juan Carlos from WATAUGA, TX Share snap broken Snap in the missing track stop and twist snap the middle spray arm. That's so simple. Read more... Dishwasher Heating Element PartSelect Number PS8260087 Manufacturer Part Number W10518394 This manufacturer certified heating element is used to cook heat in the dry cycle and increase the water temperature during parts of the wash cycle when certain options are selected. If the dishes do not dry or the water in the does not get hot, you may need to replace the item. This set includes the heater, two heater fasteners, and is a real OEM part. Remember to disconnect the power before starting the repair. Use a multimeter to test the continuity heating element to determine if this is the part that causes your symptom. This section does not include any washers. To make the repair, disconnect the wires from the bottom of the element on the back, remove the plastic nuts that hold it in place, remove the element and repeat these steps in reverse order to install the new part. This is an easy repair that requires only a screwdriver, wrench set, and should take less than 30 minutes. Fixes these symptoms Leaking Not cleaning dishes properly Do not dry dishes properly See more ... Installation instructions Dennis from Sedro Woolley, WA Heater item broken. Step 1: Remove the screws at the bottom of the worktop. Step 2: Remove the screws that secure the bottom kick plate. Step 3: Loosen leveling legs. Step 4: Pull the dishwasher out of the hole. Step 5: Unplug dishwasher. Step 6: Connect wires from the bottom of the item on the back. Step 7: Remove plastic nuts that hold the item in place. Step 8: Remove the item. Step 9: Reverse steps 1-7.Step 10: Drink beer. Read more... Lower wheel assembly PartSelect Number PS11747717 Manufacturer Part Number WP99002780 This lower fatrack roller is less than two inches in diameter. It is made entirely of white plastic. If you find that the dishwasher makes loud noises or the lower rack is stuck when you move it in or out, the lower wheel unit may need to be replaced. Dishrack wheels allow easy movement of fatrack in and out of the dishwasher. These rollers tend to wear down at the same speed, so it is recommended to replace both pairs at the same time. Open the dishwasher and remove the bottom stand, locate the lock tab and rotate until it easily slides out of place. Slide the new wheel over the axle and locate the lock tab to reattach. Fixes these symptoms Noisy Not cleaning dishes correctly See more ... Installation instructions Walter from Tucson, AZ Broken lock handle The hardest thing was to find out that you only need to buy the lock handle because it only comes as a complete lock assembly, why they even list the lock assembly as a separate part in the parts list stupid. (you get the handle and lock already assembled, and it costs less than the lock mounting without the handle). Whatever all you have to do is to discount the power of the dishwasher (unless you like to live dangerously like me) take the drill with the right size torx bit and remove all the screws on the inside door pan (the top middle two screws actually keep the lock device in place). Discount the 4 wires from the old part and reconnect them to the new part and install the torx screws are careful not to remove the plastic wires they screw in if you are using a drill. The whole process takes less than 5 minutes. I am surprised that Maytag used such a flimsy handle assembly in their dishwashers since they should have repair men with the most time on their hands.
