## Astoria middle school bell schedule

The first, biggest battle when becoming a middle school parent is this: wrapping your mind around the fact that your baby (emphasis on the baby) will soon be thrown into wolves -- or at least the sorrell category that seems to be throwing your child's future school. Since when did the sixth grade grow a side irritation? All right, don't breathe in that paper bag. Watch them piling on the pressures of a new school, peers, sports and homework, and it's enough that you want to turn the clock back to simpler days -- those involved in bringing together an interpedie toddler to eat broccoli. But he, my friend, is your first mistake. It's time to move your mentality game if your child's foray into middle school is going to be good (and that is it), then you have your head in the game. And that means realizing your child is growing up and charting a strategy to deal with it arrives before the first day of school. Survival strategy two: The sweet freedom of Independence Day. Students have long tips for it but can't handle too much of it, and you may be ready to start dropping out. The remarkable key to balance is to be healthy for both of you. One way to do this is to satisfy your child's desire for freedom (which is a natural developmental event, by the way) by allowing him to participate in a variety of approved activities. Playing on a basketball team, for example, offers your child an outlet for many things: camaraderie, physical activity and even peer pressure. Yes, peer pressure can have a good side. Just ask any Tween who has thrown the pregebra, benched by the coach and frustrated his teammates. Again this doesn't happen better yet, organized extra-program activities offering your child (supervised) a chance away from your carer's eyes. But you're still going to participate with encouragement in games, admire a two-act game or go to an art show. Anything that interests your child will give him a way to figure it out, your role is to provide boundaries, restrictions and protections. One way you get to practice your role is when it's time for homework. Homework teaches children how to manage time, choose and solve

problems, the National Association of School Psychologists says. Help your child set up a system -- a place and time to study with any resources necessary -- then let him deal with the challenges of middle school assignments without your floating presence. Get in touch with teachers, even if your child assures you that this is the most unpleasant thing you've ever done. That's why some clever people invented email -- use it to send casual queries about your child's class performance. Survival Strategy Three: Oh, it's hard to tween the bend in Teen Hood. no There is an increase in self-awareness (thanks, maturity), but there is also a host of new relationship situations to face. When the school becomes a fashion show or popularity contest, all this drama becomes a bit dicey. That's why it's hard for parents to know when to step in and when to let their son or daughter do things on their own. We happen to agree with Joe Update, author of Parental Guide to The Middle Years, who advises parents to play a supportive role as a form of peer relationships and disband. Surely we've been guilty of dialing the mother of the mean girl and telling us, but we learned the hard way that doesn't usually help. Steer clear of the day-to-day friend drama, but willing to step in if you feel your child is being bullied. Does he know crazy mines to avoid? Fashion. Set a few clear boundaries, such as Hamlin's length or waist stop point, but wanting to let your child have some say in what he wears. While tweens clamoring for friendships in middle school melee, they are likely to try on a variety of styles. Personally, we start to worry until talk of tattoos and multiple holes come into play. As you lead your middle school, remember: your role is not one of perfection. Shake any nagging doubts about your value that may bubble to the surface the first time you chaperone middle school dance. (Hey, this is happening!) The key is to get involved, even as you allow tween your greater autonomy. When you lead the middle school scene, your child is more likely to have better grades, attendance and homework skills, according to researchers at Johns Hopkins University. Besides, they'll be ready to make it in high school. Will you heprontile again? its okay . You can put that paper bag down, we'll leave our high school talk the other day, page 2 back to school time means stocking on pencils, sticks and other traditional supplies that generations of kids stowed away at tables, cubbies and closets. In elementary and middle schools, teachers typically offer lists of specific items to pick up; and even in high school, many educators require certain types of notebook paper, pens and the like. In addition to classic supplies -- crayons, notebooks, rulers -- that consistently make these back-to-school lists, there are a number of others to consider. Today's student has an arsenal of antennas and gismos to help him manage the workload and enhance the learning experience. Whether it's a fresh spin on a classic or newfangled instrument, these five cool school tools take a degree to get your son or daughter studying in style. The contents of even students before K can get a head start in their computing knowledge by learning the laptop. For less than \$50, these laptop-like toys can reinforce the basic skills that are taught in the classroom with fun, educational games and In its short history, learning laptops is now in handy sizes with more sophisticated graphics and a wide range of software that covers topics including reading, math, foreign language and more. Kids can navigate through many of these models with keyboards, electronic style or control pads with interfaces like a video game system. For middle and high school students who need word processing and Internet access capabilities, netbooks are a great option. Priced at several hundred dollars, these mini laptops have been getting tech headlines for their usefulness and affordability. In fact, some schools are starting to use netbooks in the classroom thanks to their budget-friendly assets. Advertising finding the perfect backpack is very important for many school kids. After all, they berry it around with them every day and want it to be a cold harvest. Parents are probably more concerned about the closed toll it takes on that young back. Fortunately, there are alternatives out there to please both parties. Unfortunately, you should probably spend more cash in return for ergonomic quality. To protect the back and spine, watch out for packages with plenty of padding. Empty straps and back panels are good signs. Make sure the straps fit snugly against the body, and the backpack comes with a chest strap for added support. When wearing a backpack, it should sit higher on the back instead of pushing the spine by hanging out on the buttocks. There are also rolling backpacks to choose from, but some schools no longer allow them. And they might be lessened by the very cool factor your student wants to make publicity, it's important that school kids learn how to add, subtract and the like -- with occasional help from fingers and toes. But when the higher math rolls up and onwards, it's time to pull out the big guns. Calculators have been a common item in older kids' backpacks for a while now, and they are now offering math and science help more than ever before. Texas Industrials, one of the most common brands of calculator manufacturers, offers additional software, memory storage and pre-installed training programs on certain models. Students can also now choose more pleasing aesthetic calculators such as bubble pink graphing versions and beginner red fire engine models. Pencils and promotional paper will never be out of style for taking notes. But for techie students out there who want to get the most out of their note abilities, smartpens are neat and relatively cheap at around \$150. Smartpen LiveScribe pulse writes on specialized paper that digitally records what you write and where on the page. At the same time, the pen can record audio as well, which means a student can take notes and record the speech at the same time. When Time to study, hook smartpen on a computer to download all notes to a source. In this way, students can place Smartpen on notes on the specialized article to hear the relevant sound. If your student doesn't need that much technological magic, the computer's fusion flight of leap frogs also digitally records what a student writes. The writing machine then converts written notes to digital documents. Like LiveScribe Smartpen, Pentap also requires specialized paper. Since Pentop doesn't save audio, there are many discreet mP3 recording devices and audio recording add-ons for the iPod that can do that advertising function between note, laptop learning and backpack toting, kids have to do their homework. Whether it solves a hard math problem, researching a science exhibition project or creating bingeology for a so-called paper, the web has a wealth of educational resources. But tracking the best of those resources can be challenging, and parents may be hessy about letting their children go online. Fortunately, some companies have developed strong homework assistance programs for students of all learning levels. DiscoveryEducation.com, for example, provides assistance for seven different subject areas, along with interactive games and the student fits with external web links for additional tutoring. For a monthly fee, Cosmeo by Discovery Education is a store stop for Discovery films, scientific papers, step-by-step academic education and more. Using the breadth of valuable information online, kids can enhance their learning experience and continue to build A+ grades. Advertising Ads
