# Garrys mod non steam

No Steam user error is an error that any user can have. It can be solved by simply restarting Steam from a task manager or in other ways. The first method helps in most cases, but sometimes does not disappear even if the program is restarted. What is the bug and how can it be fixed? The user can verify the integrity of the cache. It is corrupted after a full scan of the system using wedges or antivirus. It is more common in a pirate where antivirus programs treats downloaded files as viruses. To check, you need: Go to Stim and click Harris Maude with the right mouse button; Properties - Local files; Check the integrity of the cache. If files have been corrupted, you should reinstall the program and add a folder with the game to Allowed. Almost every antivirus has such a function. Sometimes the problem is not the updated version of Stim, so restarting the program would be the right decision. Alternatively, you can go to the file location and search clientregistry, delete it, and restart Harris Maude.
