## Fire inspection checklist ohio

Fire inspections are aimed at a number of advantages, not only for firefighters, but also for the public. The emergency fire service acquires knowledge of the buildings. Fire tests help the public to make buildings safer by protecting businesses and consumers through the enforcement of the fire safety code. This is the goal of the St. Marys Fire Department to inform and assist property owners with information and instructions to comply with the Ohio Fire Code and The Life Safety Code. Annual inspections are required and all commercial properties under the jurisdiction of the fire service are required. The tests serve to implement Fire Codes properties and identify and correct unsafe, hazardous and/or inappropriate conditions, and also serve to maintain our Emergency 9-1-1 database on fire and ambulances. What are we looking for during the tests? During the test, we look at many things depending on the type of load. Items include: the size of buildings, electrical and gas shut-offs, hazardous materials, and life safety systems, to name a few. The process of annual fire inspections and annual fire inspections are carried out by looking at both the outside and inside of the building, making sure that everything is up to the current fire code. After the inspection has been completed, the fire inspector, together with the owner/occupant, will review the results of the inspection, including any irregularities found. If possible, the message is sent to the owner/indemn. If the infringements are not rected after the re-inspection, the message will be sent to the Fire Chief, who will contact the owner/occupant, and another inspection will be carried out. Daily fines can be assessed by the owner/passenger until all infringements are rected. Examples of violationsExit/output lights are functioning properlyAvailable
