Songs about monday youtube

Summer officially ends next week. . But you still have holiday videos to help you remember the good times, don't you? In the age of YouTube, you can give away your home movies not only to friends and family, but also to the whole world. Here are a look at two products - flip camera and Casio Exilim EX-277 digital camera - designed to be an easier YouTuber.Pricing: 512MB version, about \$109; The 1GB version, about \$120Pure Digital compact, affordable, easy to use camera comes with software for PC or Mac, among other things, allows you to upload YouTube or Grouper video. I reviewed the camera in June, so just cut the chase and say it is relatively easy to upload to YouTube - eliminating a few steps from the camera's PC software. But it's not as easy as the YouTube upload software Casio offers. (More on that in a little while.) To upload video, connect the Flip camera to your PC or Mac via USB and run Flip Video software on your computer (preinstalled on the software camera). Choose Share Video, then choose Share Online and choose YouTube. PC software can format video for YouTube, place the formatted video clip file on the desktop in a new folder called Upload to YouTube, and start YouTube on your computer in Microsoft Internet Explorer. Here you sign in or create an account and enter a title, description, and tag for your video. Finally, you find the video file using YouTube in Internet Explorer, and then click that Upload.Your uploaded video will appear on YouTube soon. How long to wait depends on the length of your clip, how busy YouTube servers are, and so on. Flip PC software adds a short, quiet promo for the Flip camera at the end of your YouTube clip, and you can't delete it. To avoid promotion, you need to upload your video clip manually without using Flip PC software. Pricing: The \$199The Exilim EX-277 is one of four Casio digital cameras recently released or announced a YouTube capture mode feature - which means cameras can capture video clips formatted for ideally YouTube. Cameras come with free software that you install on your computer to upload video clips stored on your computer directly from your computer to YouTube. Casio says there is an agreement with YouTube to become the only supplier of YouTube mode during the 2007 holiday shopping season. To date, youTube mode and other Exilim models have ex-S880 (\$300), EX-V8 (\$330) and EX-Z1080 (\$280). I took the Ex-277 with me on his last trip to Ogunquit, Maine. When I got home, I uploaded two holiday videos to YouTube using Casio's software on my Windows Vista PC. You can see both clips in Traveler 2.0. One of the clips is the bright sun The other one was taken on a full moon. YouTube video capture mode is a bit cumbersome to turn on. You must click the BS button (that means Best Shot), then scroll a scroll preset photo and video modes. Towards the end of the options you will find YouTube mode. Select using the camera's Set button to activate video mode captured in MPEG-4 H.264 video format with 640-by-480 pixels and 30 frames per second. YouTube installation software, which you installed from a CD included in your computer, made uploading clips with a single dialog box a single dialog box event. The software automatically finds all the video clips on your camera when connected to your computer via the included USB cable. You can upload all clips or just your picks. You can also enter a video title, description, and tags using Casio's software; Choose a YouTube category, such as Travel & Places; select a language; set our video generally or privately; and casio software if you have a YouTube account or have one. When it's done, click Save and the software will take care of everything else. Casio camera and YouTube software make uploading videos to the site as simple as possible. One complaint: Casio's software allows you to enter a total of 25 characters (including spaces) for your YouTube tags, which helps other YouTube people find your video. However, you can enter many more characters on the YouTube site. Neither flip camera nor Casio digital camera gives you the best video quality. But if you want to get your videos on YouTube quickly, Casio Exilim gets my vote. The most expensive Flip camera is expensive, but because of its 7.2 megapixel digital camera, exilim Flip is much more versatile. For example, Exilim can capture many video clips, such as keep the Secure Digital card collection, but with flip camera, depending on the model, the video is limited to 30 or 60 minutes. You can delete your video clips in Flip to free up space, or you can delete clips after you've uploaded them to your computer. However, keep a few things in mind before you buy both devices: First, uploading and formatting videos to YouTube in the first place is not so difficult -- if it were, there wouldn't be a trillion video clips on the site. Secondly, the software of both products allows you to do a lot in terms of editing or adding effects, titles or transitions. For these tasks, you need video editing software. And thirdly, video editing programs can make it easier to upload finished video productions to YouTube. For example, Apple includes a YouTube upload feature in the latest version of iMovie. Apple's iPod Touch: Apple's new iPod Touch is, in essence, an iPhone without a phone. The latest iPod iteration shares the touchscreen, software and Wi-Fi features of the iPhone. Apple will begin shipping iPod Touch in late September. An 8GB model costs \$299 and the 16GB model \$399.Palm Foleo Cancels: Palm Foleo cancels, a laptop treo smartphone companion due to ship until the end of summer. Palm CEO Ed Colligan wrote on his company blog that Foleo canceled to focus on developing a single device platform instead of Palm two (one for Foleo, the other for the next generation of smartphones). Colligan one day left the door open to introduce a modified Foleo II. TomTom GPS with Voice Recognition: The new TomTom GO 920 T features voice recognition that lets you tell the device where you want to go, so you can keep both hands on the wheel. The portable unit will come with pre-installed maps of Europe and North America and includes an FM transmitter. It's expected by ship in the fourth quarter. Note: When you buy something after clicking on the links in our articles, we may earn a small commission. For more information, read our affiliate link policy. Summer officially ends next week. .
