Parkway northeast middle school band

The first, biggest fight when you become a middle school parent is this: wrapping the mind around the fact that your baby (emphasis on baby) will soon be hurled to the wolves -- or at least the grumpy bunch that seems to populate your child's future school. Since when have sixth-graders allowed side fires to grow? Ok. Stop inhaling in this paper bag. Your child is doing well - they worry us. We know that as a parent it can be difficult to see your baby grow up and become your own person. Watch them pile on the pressure of a new school, peers, sports and homework, and it's enough to turn the clock back to simpler days -- those who helped get an intrepid toddler to eat broccoli. But that, my friend, is your first mistake. It's time to get your mental game moving. If your child's trip to middle school will be fine (and it is), then you need to get your head into the game. And that means your child growing up and setting out a strategy to deal with it before the first day of school. Survival Strategy Two: Independence Day Sweet freedom. Middle school students yearn for it, but can't cope with too much of it, and you may not be willing to let go. The key is to find a balance that is healthy for both of you. One way to do this is to fulfill your child's desire for freedom (which, by the way, is a natural development event) by allowing him or her to participate in a variety of approved activities. Playing on the basketball team, for example, offers your child a chance for many things: camaraderie, physical activity, and even peer pressure. Yes, peer pressure can have a good side. Just ask any tween that flopped before the algebra, was put on the bench by the coach and let their teammates down. That will not happen again. Better yet, organized extracurricular activities offer your child a (supervised) chance to get away from your watchful eyes. But they can still participate by cheering on the games, cheering a two-act error, or going to an art show. Whatever your child cares, give him or her a way to explore it. Your job is to offer limits, limitations and support. One way to practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to deal with time, make decisions and solve problems. Help your child set up a system -- a place and time to study with the necessary resources -- and then let them homework in middle school without your floating presence. Stay in touch with teachers, even if your child assures you that this is the most uncool thing you've ever done. That's why a smart person invented email -- use it to occasionally ask how your child performs in class. Survival Strategy Three: Oh, the Drama It's hard being a tween bent on teen-hood. Not not there is increased self-confidence (thank you, puberty), but there are also a variety of new relationship situations to encounter. When the school becomes a fashion show or a popularity contest, all this drama becomes a bit spicy. This is because it's hard for parents to know when to step in and when to let their son or daughter work alone. We happen to agree with Joe Bruzzese, the author of Parents' Guide to the Middle School Years, who advises parents to play a supporting role when peer relationships form and dissolve. Sure, we're guilty of choosing the middle girl mom and having our say, but we've learned the hard way that it doesn't usually help. Avoid the daily friendship drama, but be ready to step in if you feel your child is being bullied. Avoiding another minefield? Fashion. Set a few clear limits, such as hem length or a waistband breakpoint, but be prepared to give your child some say in what she wears. While tweens scream for friendship in middle school melee, they'll probably try a variety of styles. Personally, we don't worry until we talk about tattoos and several piercings. Remember how you lead your middle school: your role is not perfect. Shake all the nagging doubts about

your self-worth that can bubble to the surface when you've accompanied a middle school dance for the first time. (Hey, it happens!) The key is to be involved, even if you allow your tween more autonomy. According to a report by researchers at Johns Hopkins University, if you're trapped in the middle school scene, your child is more likely to have better grades, attendance, and homework skills. They are also prepared for success in high school. Hyperventilate again? It is ok. You can turn it off. We're leaving our high school discussion for another day. Page 2 School time means stocking up on pencils, sticks, and other traditional supplies that generations of children have stowed in desks, cubbies, and lockers. In primary and secondary schools, teachers usually provide lists of specific items to be picked up; and even in high school, many teachers need certain types of notebook paper, pens, and the like. In addition to the classic supplies -- crayons, notebooks, rulers -- that constantly create these back-to-school lists, there are a number of others to keep in mind. Today's student has an arsenal of utensils and gizmos to help him cope with improve the learning experience. Whether it's a fresh spin on a classic or a new-fashioned gadget, these five cool school tools make the touch to get your son or daughter to study in style. Content Pre-K students can also learn a head start on their computer know-how with ready-to-learn laptops. For less than 50 dollars, these laptop-like gadgets can use the basic skills taught in the classroom with fun, educational games and and In their short history, learning laptops now come in handheld sizes with more sophisticated graphics and an extensive range of software that covers topics such as reading, math, foreign language and more. Children can navigate through many of these models with a keyboard, electronic pen, or control pad with an interface such as a video game system. For middle and high school students who need word processing and Internet access, netbooks are a great option. With a price tag of a few hundred dollars, these mini laptops have tech headlines for their usefulness and affordability. In fact, some schools are starting to use netbooks in the classroom, thanks to their budget-friendly wealth. Advertising The search for the perfect backpack is crucial for many school-age children. After all, they are dragged around with them every day and want it to make a cool impression. Parents are probably more concerned about the toll the pack is demanding for these young backs. Fortunately, there are alternatives to please both parties. Unfortunately, you will probably have to spend more money in exchange for ergonomic quality. To protect the back and spine, pay attention to packs with plenty of upholstery. Padded straps and back walls are good signs. Make sure that the straps fit tightly to the body, and that the backpack comes with a chest strap for extra support. If you are carrying the backpack, it should sit higher on your back instead of straining the spine by hanging on the hips. There are also rolling backpacks to choose from, but some schools no longer allow them. And they could distract from the crucial cool factor your student demands. Advertising It's important that schoolchildren learn how to add, subtract, and so on in their heads -- with occasional help from their fingers and toes. But when higher math rolls around in Junior High and on, it's time to pull out the big guns. Calculators have been a routine item in the backpacks of older children for some time, and they now offer more math and science help than ever before. Texas Instruments, one of the most common manufacturers of calculators, offers additional software, memory and pre-installed tutorial programs on certain models. Students can now also choose from more aesthetically pleasing calculators, such as Bubblegum pink graphing Editions and Fire Engine red beginner models. Advertising pencil and paper will never go out of fashion for notes. But for the Techie students out there who want to get the most out of their note-taking skills, Smartpens are neat and relatively inexpensive at about 150 LiveScribe's Pulse Smartpen writes on special paper that digitally records what you write and where on the page. At the same time, the pen can also record audio, which means that a student can take notes and record the lecture at the same time. If it's Time for study, the smartpen hooks in a computer to download all the notes in one source. This allows students to place the smartpen on notes on the special paper to listen to the appropriate audio. If your student doesn't need as much tech magic, Leap Frog's FLY Fusion Pentop Computer also digitally records what a student writes. The writing instrument then converts the written notes into digital documents. Like the LiveScribe Smartpen, Pentop requires special paper. Since the pentop does not store any audio, there are many discrete mP3 recording devices and audio recording add-ons for iPods that can fulfill this feature advertising between notes, laptop learning and backpack ingestion, kids need to do their homework. Whether it is solving a difficult mathematical problem, researching a science fair project or creating a bibliography for a term paper, the Web has a wealth of educational resources. But finding the best of these resources can be a challenge, and parents can be reluctant to unleash their children on the Internet. Fortunately, some companies have developed robust homework helper programs for students of all levels. for example, DiscoveryEducation.com provides support for seven different subject areas, along with interactive games and student-specific external web links for additional tutoring. For a monthly fee, Cosmeo by Discovery Education is a one-stop shop for discovery videos, scientific articles, step-by-step lessons, and more. By leveraging the breadth of valuable information online, children can improve their learning experience and continue to make A+ grades. Advertising
