To view the specific vehicle manuals, please enter a valid 17-digit VIN (Vehicle Identification Number). Multi-media integrator at Audi A4, A5, a6/a6l, a8, q7 2004-2008 2g mmi 7inch Manual is suitable for 2 more products: AUDI-MMC-V15AUDI-MMC-V15C Audi A4 holds the distinction to revive the single Audi brand after its big slump sales about two decades ago. Launched in the mid-1990s, the A4 quickly proved a favorite among luxury car buyers thanks to its beautiful, well-finished cab, sharp handling and quattro all-wheel drive available. The tight panel gaps, high-quality materials and firm and comfortable seats give the interior the right European ambience, while a sweby ride and willing performance make the Audi A4 an excellent choice for road travel. Although these basic features have been part of the A4 personality since day one, this Audi -- which has traditionally been available in sedan, car, and convertible body styles -- has become increasingly polished with each successive generation. No matter what year you look at, the A4 will deliver athletic performance and a comfortable and welcoming cabin. Add in the all-wheel drive appeal (a serious asset for those living in inclement parts of the country) and it's easy to see why the A4 has become an excellent choice for an entry-level luxury car. With five generations behind it, full of constant development and technical innovations, the Audi A4 is one of the most prominent cars in its class. And with peak production numbers at more than units per year, is also a best

seller. However, a story about the history and evolution of this car begins with its predecessor, called the Audi 80. Introduced 1972 under the code name B1, this was the car whose modern design and progressive engineering took the family car market by storm. This has set the trend for all Audi models in the seventies. Offering many innovations, it has come up with the slogan Vorsprung durch Technik, which means Progress through technology. Some visible deployments were a negative roll radius, which gave more stable maneuverability and a double diagonal circuit braking system, which revolutionized braking behavior. Over the next two decades, the Audi 80 introduced several features that we take for granted in modern cars. The second generation, designedGiorgetto Giugiaro combines the functionality of a spacious interior with the modern look. Zinc-plated bodywork, low firing coefficient and redesigned rear suspension, which allow more space for luggage, are just part of third generation innovations. The latest generation brought a TDI engine, which revolutionized diesel technology with lively performance and superb fuel economy. Both the Audi 80 and A4 have two unique features that make them different from similar cars. One of them is the structure of the powertrain, representing the layout of the engine and gearbox inside the car itself. Unlike other front-wheel drive cars, it has a longitudinal-mounted engine with rear-mounted transaxle transmissions. Despite many advantages, this configuration places the engine right at the front of the engine compartment. This makes the car prone to under-turning fast. However, designers have always kept this trend under control. Another feature is a famous all-wheel-drive system called Quattro. The 80 Series was the basis for the Audi Quattro, a car that changed the front of the rally forever. Using this superb, robust and reliable technology in the Audi 80 made it the first road car with permanent four-wheel drive produced in large numbers. In the 1990s, Audi introduced a new naming principle for their range, and the Audi 80 became the Audi A4. The tendency to replace the number-based nomenclature with a combination of letters and numbers was also popular at the time with other manufacturers, such as Mercedes or Volvo. First generation 1994-2001 B5 (Typ 8D) Despite being famous cars as durable and well-built, quality, older generations did not have enough prestige to compete with the main competitors, such as BMW and Mercedes. With the new name, Audi decided to position the A4 in the premium midsize car segment. The emphasis was on overall appearance, dynamics, and balanced performance. Although it may look similar to the old 80 at first glance, the A4 offers softer front lines and the most severe back lines. The whole outline is more and more dynamic. Body shapes are available as a 4-door sedan and a 5-door property called Avant. Under the hood, there is a wide range of petrol and diesel engines. Although some of them date back to the previous generation, there have also been several Available. The most notable are the new V6 and a turbocharged four-cylinder engine with five valves per cylinder. This was the world's first mass-produced machine with this technology. Instead of gaining more power, the main goal with it was to maximize fuel efficiency and improve manoeuvrability. Among the diesel engines, there are several variants of the well-proven TDI unit and the new V6 diesel unit. Another major update was the Tiptronic transmission, which, in addition to automatic operation, allows manual selection of tools. The suspension used a double wishbone setup at the front and multi-link at the back, which provided an excellent balance between ride comfort and sporty handling. This meant that it was neutral on the roads, but also sharp and accurate when going around the corners. Buyers have acknowledged the new A4 offerings, making it an instant hit. This was a refined and subtle alternative, but sporty to rivals, such as the BMW 3 Series or Mercedes C-Class. For those who wanted more sportsmanship, Audi launched the S4 and RS4. With Turbo V6 engines and Quattro system, these cars were a road going racing cars. Second generation 1994–2001 B6 (Type 8E;) Following the huge success of the first generation, Audi designers used the same formula to make a versatile family car. Once again, the goal was the car that offers comfort, plenty of room and sporting potential. The new A4 received a sharp and edgy design, keeping it up to date with the new millennium. On the outside, a tapered front end and curved windscreen gave it a certain resemblance to the TT, while the rear end was similar to the oldest A6. The two-door convertible version also joined the proven sedan-Avant duo. The biggest improvements were under the hood. Most gasoline engines were made using aluminum alloy and had increased output power. There were several four-cylinder engines, with or without a turbocharger, and two V6 variants. The biggest upgrade for gasoline engines was a direct fuel injection, called FSI. Diesel engines have received the new fuel injection technology called Pumpe-Düse or PD. Another notable update was the continuous variable transmission, called Multitronic, which replaced conventional automatic transmission on front-wheel drive models. On the priority list was the chassis that was redesigned and strengthened. The rear suspension has received major upgrades, making it similar to one from the Audi A8. With this, the manoeuvrability was comparable to the rear wheel driven Mercedes and BMW while keeping the feel easy to The most powerful version, offered only as s4, was less brutal compared to its predecessor. It had a naturally aspirated V8 engine, a 6-speed manual or automatic gearbox tiptronic and quattro all-wheel-drive as a standard. Third generation 2004–2009 B7 (Typ 8H) 8H) being marked as a separate generation, this variant was in fact a facelifted B6. Audi has done this to keep it at a pace with increasing competition in this market segment. Redesigned headlights and headlights, coupled with a new grill that matches the look of the new A5 kept the exterior looking fresh for the next few years. However, with identical side panels and only minor updates to the interior, the resemblance to the older version was evident. There were no revolutions under the skin either. Instead, there were many updates. Most notable were several gasoline engines that used both direct fuel injection and turbocharging, as diesel engines with four valves per cylinder. In addition, there were some updates to the suspension and steering system. However, using wise design combinations and technology upgrades, this generation bridged the gap to its successor arrived in 2009. Fourth generation 2008-2016 B8 (Typ 8K) Towards the end of the decade, Audi had to make radical changes to maintain its market position. The fourth generation is a whole new car, designed from the bottom on a new, modular platform. The biggest advantage of this platform is that it allows you to move the wheels from front to front, reducing the front overhang. This, combined with the new steering system and redesigned suspension, improved handling and reduced under-steering. The exterior featured a fresh new design. The large black grille and elegant LED headlights give the front end an aggressive and muscular look, while the side profile and rear keep a more conventional and softer look. Together, made the machine well rounded blend of subtle and dynamic. Compared to the previous generation, the body is larger, with doors in generous shape, which allow easy entry. The interior is spacious, providing plenty of space on both the front and rear seats, making it suitable for long journeys. In addition to the saloon and Avant version, this generation is the first to offer an Allroad version. It has a wider path, increased ground guard and Quattro unit, while different exterior grid features, underbody guards, and roof tracks. All petrol engines use direct fuel injection as standard. As part of the reduction efforts, all four-cylinder units have turbochargers and make for most of the engine range. There are still two V6 engines available, one with overcharger and others without it. At the high end of the range, there is an RS4, equipped with V8 engine and Quattro unit. Fifth generation 2016–present B9 (Typ 8W;) In the final iteration, the exterior has many improvements made not only for form, but also for operation. A single-frame grid headlights with an undercut design give a more focused look at the front. The overall design gives a more aggressive feel, while other details exterior mirrors mounted on doors improve the aero-acoustic A4. More improvements hide under the skin. A hybrid Construction makes the new car lighter, despite being longer and wider than the previous model. All engines focus on power, manoeuvrability and fuel economy. The choice of petrol engines ranges from a small four-cylinder standard cars to a V6 power in the S4 and RS4. Direct fuel injection and turbocharging are standard for all engines. The situation is similar to diesel engines, with several four-cylinder variants to an available V6. The new front and rear axles enhance comfort, along with an optional adaptive suspension system. With it, the driver can choose from standard mode, comfort or sport. The interior offers even more free space and space for rear legs than its predecessor. There is a redesigned infotainment system, operated by a rotating button, handwritten on the touchpad or by voice. However, the biggest improvement is the virtual cabin that uses a digitalized tool group, offering two modes of operation. Classic mode provides a clear view of the speedometer and tachometer, while infotainment mode minimizes indicators in favor of navigation and other visual means. Aids.
