Eotech night vision red dot

eotech holographic weapon See all 16 results Visit the help section or contact us Use EOTECH Holographic Weapon View and instantly understand why it's close to the quarterly combat sight of the choice of America's elite military and law enforcement units – nothing gets you on target faster, with greater accuracy. EOTECH's speed-to-target technology and widescreen heads-up display delivers lightning-fast target acquisition and improved situational awareness, all wrapped in rugged, battle-proven design. Selected as a close quarter view of USSOCOM since 2001 and used worldwide by top-level combat units that advocate security, security, and freedom. See Eotech Advantage Unwavering Focus Both reticle and target keep the unchanged, razor-sharp focus. Field of vision HWS wide rectangular window increases peripheral vision. Accuracy in any range When the target is increased HWS point target is not. Never out of the Fight Even if the sight window is partially shaken or blurred, HWS continues to operate. The same night vision-compatible technology provides a radically enhanced observation system over traditional reflex sights with maximum clarity even in complete darkness. Reticles for any platform Reticles for any platform Its big ring with the exact purpose of giving promotes a much faster target purchase than a single point, especially under coercion. see more See Eotech Advantage Unwavering Focus Both reticle and target keep unchanged, razor-sharp focus. Field of vision HWS wide rectangular window increases peripheral vision. Accuracy in any range When the target is increased HWS point target is not. Never out of the Fight Even if the sight window is partially shaken or blurred, HWS continues to operate. The same night vision-compatible technology provides a radically enhanced observation system over traditional reflex sights with maximum clarity even in complete darkness. Reticles for any platform Reticles for any platform Its big ring with the exact purpose of giving promotes a much faster target purchase than a single point, especially under coercion. see more advanced holographic technology use; EOTECH Holographic Weapon Sights (HWS) are among the fastest and intuitive surveillance systems on the planet. That's why you'll find them the weapons of America's most elite law enforcement professionals and special operations warriors. And you will see the benefits when you engage in a goal. HWS provides instantaneous, razor sharp view of both reticle and target – unlike red dots. With HWS, the holographic reticle captures the shooter's play, allowing the shooter to focus on both the target and the at the same time. No more shifting back and forth from almost far, reticle to goal. The HWS wide rectangular window increases – not inhibits – peripheral vision. HWS encourages shooters to keep both eyes open by increasing speed on target acquisition and improving situational awareness thanks to the expanded field of vision. Accurate accuracy is the result when the target is increased, but the target point is not. The threat is left without a place to hide. HWS's non-reflective visual window and holographic reticle is visible only to you by the shooter. Engineering day or night combat missions are not reflected or metal-coated surfaces give up their position. Even if the window of vision is partially shattered, obscured by snow or mud, HWS will continue to operate and provide accurate accuracy. One of the many reasons they trust america's elite is the most striped, hostile environment in the world. Many models of the Holographic Weapon System are equipped with night vision-compatible technology to allow operators to use the night vision device with their HWS. Its multiple brightness settings are almost undetectable by the enemy's night vision monitoring system and contribute to the ultimate clarity in complete darkness. HWS® RETICLE RELIABLE. Trusted. BATTLE PROVEN SOLUTIONS. L3 Technology Product Solutions developed by our sister brand Insight Technologies. Trusted and used by U.S. military and law enforcement. Our hypersensitivity thermal systems are designed to detect infrared light, radiation and heat that is not visible to the human eye, coming from humans, animals and vehicles over long distances. Night vision devices work in three ways: - Image intensification by increasing any light reflected from the target - Thermal imaging, collecting heat waves from the target - Active lighting with image enhancement, as well as adding some light to your target, refusing detectable light signatures in the process With decades of technical and combat experience, EOTECH provides the most advanced and reliable electro-optical devices available. We work in partnership with all levels of elite professionals who devote their lives to their work and are struggling with unified efforts in the areas of security, security and freedom.
