Clothes are treated with Nikwax TX. There ® no heat needed to develop durable waterproofing (DWR)... Dry outdoors or in a dryer at low temperatures if labeling instructions allow. (source description: the official website of Ask about this product Using the right product Cleaning is important how to use a good waterproofing. Traditional detergents leave a patina on the tissues that absorb water and reduce the effectiveness of DWR waterproof treatment. For better results, remove all non-washable parts and pre-wash with Nikwax Tech Wash in a separate washing cycle. There is no need to dry clothes before waterproofing. Remove all detergent residues from the washing machine tray Insert up to 2 clean garments into the washing machine Use 100 ml of the product per garment Use a program for synthetic garments at 30 ° C and with low turns Do not insert into the garment washing machine with staccateer sealing maintain good waterproofing always washed with Nikwax Tech Wash®. Do not use detergents or softeners. Easy to use, safe and high performance waterproofing No.1 for wet weather clothing. It adds durable waterproofing (DWR) and resuranc - in the washing machine. Breathable waterproof clothing is more likely to bathe in sweat and water when used in wet or wet conditions. If the outer fabric absorbs water, clothes can lose up to 70% of its breathability. Therefore, durable waterproofing (DWR) in the outer fabric of the jacket must be maintained to ensure comfort. Eventually it will disappear and must be renewed with Nikwax TX. Rinse ® directly. When we work hard, we suede. The evaporation of sweat cools us and keeps us comfortable. But, when it rains and we don't want to get wet, we wear waterproof outer jackets to keep us dry. Waterproof fabric must allow steam to pass through it, or breathe, otherwise our sweat can not evaporate, making us too hot and wet due to condensation. In addition, if the outer fabric of clothing absorbs water and becomes wet, its breathability will decrease, making us feel slimy and wet. Nikwax TX. Washing ® wash-in adds durable waterproofing (DWR), preventing water absorption while maintaining breathability while keeping the body dry and comfortable. Anyone operating outside in wet or humid conditions will benefit from breathable waterproof clothing. If he is a climber or give, or if he works outside as a farmer or expert, he will need good waterproof clothes. His waterproof clothes can absorb water just because it's dirty. First of all, try cleaning with Nikwax Tech Wash® and if they are new enough, or recently repellent, durable waterproofing (DWR) will only be revived by cleaning. But, once the garment has been worn completely it will be necessary to add DWR using Nikwax TX. Rinse ® directly after cleaned with Nikwax Tech Wash®. Alternative waterproofing products are usually solvent-based aerosols; in addition, they can be water-based and use fluorocarbons. Flammable aerosol products. Fluorocarbons pose a potential risk to the environment and long-term health of consumers. Nikwax TX. Direct® Wash-In is a safe product for use on breathable waterproof fabrics. It is derived from water, is non-flammable, does not contain volatile organic compounds (VOC) and does not have fluorocarbons. Nikwax TX. This ® specially designed and optimized for breathable waterproof clothing, providing durable waterproofing (DWR) while maintaining breathability. Nikwax TX. The ® doesn't need heat to develop its DWR, so you don't need to use a dryer for best results. As garments with seams paste age, the adhesion of the tape weakens, becoming increasingly brittle and prone to heat, so it is better to avoid using a dryer. Using the right product for cleaning is just as important as using the right waterproof product. Ordinary detergents leave behind a thin waterproof film on materials that conceal their durable waterproofing (DWR). Therefore, always clean waterproof clothes with Nikwax Tech Wash®. Remember that dirt works against waterproofness, so that periodically cleaning will improve performance. Nikwax TX. Directly® Wash-In is the market leader. It is easy and quick to apply in washing machines and high-strength waterproofing (DWR) developed on air drying. Application in the washing machine ensures that the processing passes through garments, seam handling, ribbons and cables, as well as fabrics. In addition, since the need for a dryer is eliminated, this saves energy and protects weaker and older clothing from heat. Nikwax TX. Direct® Wash-In has been specially designed and optimized for breathable waterproof clothing; it left a flexible waterproof treatment on individual fibers that allowed steam to pass through the fabric, maintaining breathability. Nikwax ensures minimizing the impact of Nikwax products on the environment and on you, consumers. Nikwax waterproofing products are water-based, non-aerosol, non-flammable, non-toxic and environmentally friendly. They do not contain harmful solvents or volatile organic compounds (VOC), and are completely fluorocarbon-free (have been shown to be persistent in the environment and are associated with serious health problems). Nikwax TX. Direct® Wash-In is the product of choice for outdoor professional coaches. Learn more about those who use Nikwax TX. In person® and other Nikwax products, check out our certification page. For best results, remove non-washable parts and always clean first with Nikwax Tech Wash® in a separate washing cycle. Waterproofing can be done directly on clothes that are still wet.
