The bravos line of dryers made by maytag uses a belt around the drum that turns the clothes tumble. Item added to the comparison list, you can find it at the end of this page Belt broke on old machine.1. Remove front of the machine (2 screws at the bottom).2. Remove 4 screws from inside the dryer, to take off the blower housing.3. Remove 4 screws and take the large metal piece that supports the drum on the front. Remove the drum.4. Replace the two rollers that support the drum in the back end. Cleaned the pins they ran on, and oiled up very gently. Also replace the idler roller. I was surprised to see these rollers use ordinary bearings, not ball bearings.5. On the front support piece, outboard the rivets for sliding, and replaced the exhausted sliding with new parts. Applied a little adhesive (3M weather strip adhesive) to the cork pieces, to glue them around the metal. Attached the plastic pieces over the cork pieces, and sounded in place using rivets that came with the sliding kits.6. Replace front and rear feeling seal. It wasn't as troublesome as I expected it to be. They are through metal tabs Glued the points where they got together.7. Replace the felt blower seal. Glued to the blower housing.8. Reinstall the drum, installed new belt, which with good instructions (happy).9. Rethink leading support piece and front of the cabinet. I also cleared the ribbon from the cabinet and off the vent hose. In general, the work has gone without a hitch, and the machine probably has quite a few years left, despite the fact that it's 18 years old. It gives me a good feeling. I would say it would be challenging, however, for someone who isn't pretty experienced with machinery recovering. Also, the cost of the parts was significant enough that it would not have been unreacontional to opt for a new machine. Machine.
