When you're making music in GarageBand, you may want to pull other types of audio. You may have a song in the Music app or an MP3 file in iCloud that you want to use in your music. You can import music and audio files to GarageBand on both Mac and iOS and here's how. Import iOS songs or Music Memos into GarageBand on Mac

Open your music in GarageBand on your Mac, and follow these steps to import songs from iOS or Music Memos saved in iCloud. 1) Click Archive in the menu bar and place your cursor over iCloud. 2) Select the Import GarageBand for iOS or the Import Music Memos File from the pop-out menu. 3) Search for the item, select it, and click Open for iOS music or import to the Music Memos file. Import other media types into your Mac With your music open in GarageBand, do the following to import music, video audio, or similar items. 1) Click the Media Browser button in the upper right corner of the GarageBand window. 2) When the browser opens, choose audio or movies at the top. 3) Expand the category you need, select a file and drag it to your music. Importing items into GarageBand on your iPhone or iPad You can import similar types of audio files into GarageBand on your iPhone or iPad. Just follow these steps. 1) Open your music in GarageBand on iOS and tap the Loops button in the top right corner. 2) Choose Files or Music at the top to navigate to the item. 3) Select and drag your audio file to the workspace. Keep in mind if you're importing music from the Music app that you can't import protected songs or those not stored on your device. Wrapping it By importing audio files and music to GarageBand on any of your devices is easy to do. Do you have any tips like these for the new ones from GarageBand? If so, feel free to leave a comment below! Plus, take a look at how to change the tempo or share a song in GarageBand. Note: This is an updated version of a post that was published in 2016. The GarageBand app on iPad and operating system has had some changes since then, so this article applies to GarageBand on iOS 11 and later. Let's say you or your students created an audio file in another application or software program – such as Groove Pizza, Incredibox, Beeplibox, or one of many other music app options – and now you want to import that audio file into GarageBand so you can record a vocal part from above. The steps are not very difficult and opens up some useful opportunities for your students to develop their musical creations. You can use the Apple Files app as the portal to access audio (and MIDI) files in such as Google Drive, Dropbox, iCloud Drive, and more. Here is a list of the quick and basic steps:Save the audio file in an accessible locationCreate a new document in GarageBand with an audio recorder track and go to Tracks ViewOpen the Loop Library and import your file into files to list the Loop Loop file in the project you are working onFor a more detailed explanation, continue reading. How to import audio files to garageBand in iOS 11 and laterClick To tweet the audio file in an accessible locationFirst, you'll need to save the audio file you want to import to GarageBand in a location that you can access on your iPad. Fortunately, Apple has greatly improved this process with the introduction of the Apple Files app in 2017.The Apple Files app is a central file management system for all files on your iPad and iPhone. Through the Files app you can access documents, photos, videos and audio files that live in iCloud, Google Drive, Dropbox or any other compatible app. If the file is currently on your laptop, you can save it to one of these cloud locations for easy access within GarageBand.How to access the file within GarageBandWhen you open the My Songs browser in GarageBand you can see the file collection – the same ones you can see in the Files app – in a list to the left of the screen. The options you can see in your list of locations vary, depending on which apps you've installed on your iPad.At top there will be a location on My iPad. Tapping this allows you to access files within apps on your iPad. Some files you can see here will be grayed out, as they are not compatible with GarageBand. For example, the files in my Keynote app folder are grayed out because they are not audio, MIDI, or GarageBand files and therefore are not compatible with GarageBand.Se you have Google Drive, Dropbox, or iCloud (you have the apps installed and you are connected to these services) you will also see those in the Dentos list. Again, some of the files you can see here in these folders will be inaccessible because they are not audio, MIDI or GarageBand files. So in order to import an audio or MIDI file into GarageBand, first save it to Google Drive or Dropbox or one of the other locations you can see here. Steps to import an audio file into GarageBandFirst, make sure that the file you want to import is in an accessible location (see above)Then open GarageBandCreate a new documentFind the Audio Recorder (microphone) in the instrument browser and tap the VoiceTap option the Track Track6 button. Tap the Music Sections button (the + in the upper-right corner of the screen)7. Tap Section A and turn on automatically (this will allow GarageBand to comoport the length of the file you're importing. If the music section is too short, the file will be cut off)8. Tap the Loop Library button and tap the Files tab. At the top, you'll see a list of all files that have already been imported. To import your new file, tap Search of the Files application at the bottom of this window9. The Files app will open. Choose the location of the file you want to import (such as Drive or Dropbox), find the file, and select it. Your file will be to the list of files that live within GarageBand10. Then drag the file to your project. Tap and hold your finger in the audio file and drag it to the empty audio recorder track (or even under the empty track – no matter which option you choose)From the email attachment to GarageBandInstructions for this depends on which email client you're using (Gmail, Apple Mail etc.), but the general steps are:Open your email app. Find the email with the attachment of the audio file you want to import into GarageBand.Choose Save/Share, and, Then save the audio file in the Files app (or directly in Drive or Dropbox)Follow the instructions above to import it into GarageBand.Another option: iTunesIf you have a Mac laptop or desktop computer, you can also use iTunes to transfer files on your computer GarageBand.No. open iTunes, and add the audio files you want to import to the garage sharing area. Open GarageBand on your iPad and follow the steps above to create a new document. Tap the Loop browser button and you'll see a message asking if you want to move the audio files to the GarageBand file transfer folder. Tap Move Files and the audio file will be moved to the garageband file transfer folder where you can access it in your project. You'll also receive weekly music technology tips and news (if you still don't get it). You can unsubscribe at any time. Click here to download Hello! I'm Katie Wardrobe – an Australian music technology coach and consultant with a passion for helping music teachers through my Midnight Music.Eu I'm a qualified teacher, but no, I don't currently teach in a school. I help teachers through my online professional development space – the Midnight Music Community – where there are tutorial videos, courses, links and downloadable resources. I like to focus on easy ways to incorporate technology into what you're already doing in your music curriculum through a series of creative projects. I also conduct live workshops and present at numerous conferences other music education events. If you want simple and effective ideas for using technology in music education, I'd love to help you within the Midnight Music Community.Learn more and take a peek inside you can import audio and MIDI files from your computer and use them in your GarageBand music. You can add:Audio files to an existing audio recorder or Amp trackMIDI files to an existing keyboard or keyboard or battery midi files to TracksAudio or MIDI files to your iCloud Drive music or your iPad using the Files appWhen you import an audio file, it is converted to a sample rate of 44.1 kHz, 16-bit depth format if the original format is different. Imported imported audio files follow the time changes you make in GarageBand.When you import a multi-track MIDI file, GarageBand creates a new keyboard track for each track in the MIDI file. The total number of tracks resulting may not exceed 32 tracks. You can't add multi-track MIDI files to cells in Loops When Vivo.No your computer, add the audio or MIDI files you want to import into the GarageBand file sharing area in the GarageBand Finder.In on your iPad, set the length of the music section to Automatic to import the entire audio or MIDI file; otherwise, only the part of the file that fits into the current music section is imported. After you import the audio or MIDI file, you can make the music section longer and then resize the region so that more of it plays. Tap the 'View Tracks' button to open the Tracks view, and then tap the Loop Browser button in the control bar. A message appears asking if you want to move the audio or MIDI files to the garageband file transfer folder. Tap Move Files.Files are moved to the GarageBand file transfer folder. To view an audio file, tap it in the list. You can control the preview volume with the slider at the bottom of the list. Drag an audio or MIDI file from the list for Track viewing. Align the left edge of the file with the bar or tap (on the ruler) where you want it to start playing. A new region created from the audio or MIDI file is clipted to the end of the current music section unless the current music section is set to Automatic. You can make the music section longer or slow down, then resize the region so that more of it touches. Set the length of the music section to Auto to import the entire audio or MIDI file; otherwise, only the part of the file that fits into the current music section is imported. After you import the file, you can make the music section longer and then resize the region so that more of it plays. Tap the Tracks button to open Track View, tap the Loop Browser button in the control bar, and tap Files.Tap Search for items in the Files app, then find and tap an audio or MIDI file to import it. To view an audio file, tap it in the list. You can control the preview volume with the slider at the bottom of the list. Drag an audio or MIDI file from the list for Track viewing. Align the left edge of the file with the bar or tap (on the ruler) where you want it to start playing. A new region created from the audio or MIDI file is clipped to the end of the current music section, unless the section current music is set to Automatic. You can make the music section longer or slow down, then resize the region so that more of it touches. Set the length of the music section to Auto to import the entire audio or MIDI file; otherwise, only the part of the file that fits into the current music section is imported. After you import the file, you can make the music section longer and then resize the region so that more of it plays. Slide twice from the edge of the screen. The dock shows up. In the Dock, tap and hold the Files app, drag it to the top right corner of the screen, and drop it. A slide over window opens. Find the audio or MIDI file you want to import. If the file is in iCloud Drive, tap the Download to download button before you import it. Tap and hold the file and drag it from the Slide Over window to the Tracks view. Align the left edge of the file with the bar or tap (on the ruler) where you want it to start playing. A new region created from the audio or MIDI file is clipped to the end of the current music section unless the current music section is set to Automatic. You can make the music section longer or slow down, then resize the region so that more of it touches. Play.
