Start paging: Press FIND HANDSET on the phone base. All idle phones ring and display ** Paging **. Stop paging:Press /FIND HANDSET on the phone base again.. -OR-Press . OFF, or any dial key (0-9 , or) on the handset.. 1.2.3.4.1.2.3.3.1.1.2.3. *****PUT THE HANDSET IN THE TELEPHONE BASE OR CHARGER. Press the MUTE button to temporarily turn off the ringtone of the handset. The paging tone continues on the second handset. Do not press or hold /FIND THE HANDSET for more than four seconds. This can lead to the deregistration of the handset. If the displays HS Registration... A... see manual, see FREQUENTLY ASKED QUESTIONS, where the handset registers back to the phone base. ***Page 5dose in your home or office, contact your dealer or local energy company. Do not allow anything to rest on the power cord. Do not install this product where it is Walk. Never push objects of any kind into this product through the holes in the telephone base or handset, as they may touch dangerous voltage points or cause a short circuit. Never pour any liquid on the product. To reduce the risk of electric shock, do not disassemble it, but take it to an authorised service centre. Opening or removing parts of the telephone base or headphones other than the designated access door may expose you to dangerous voltages or other risks. Improper installation may result in electric shock if the product is subsequently used. Do not overload sockets and extension cords. Unplug this product and unplug the service to an authorized service facility under the following conditions:if the power cord or plug is damaged or frayed. If liquid is poured on to the product. If the product has been exposed to rain or water. If the product does not operate normally according to the operating instructions. Edit only the controls that are subject to the operation instructions. Incorrect adjustment of other controls can lead to damage and often requires extensive work by an authorised technician to restore the product to normal operation.9.10.11.12.13.***** If the product shows a significant change in performance.14. Do not use your phone (other than wireless) during an electrical storm. There is a remote risk of electric shock from lightning.15. Do not use your phone to report a gas leak near a leak. Under certain circumstances, the adapter may become consecrated when the adapter is plugged into an electrical outlet or when the headset is replaced in the cradle. This is a common event associated with the closure of any electrical circuit. The user should not plug the phone into an electrical outlet and should not insert a charged phone into the cradle if the phone is placed in an environment containing concentrations of flammable or flame-retardant gases, if there is insufficient ventilation. A spark in such an environment could cause a fire or explosion. Such environments may include: medical use of oxygen without sufficient ventilation; industrial gases (cleaning solvents, petrol fumes, etc.); natural gas leakage; etc.16. Place your phone next to your phone only when it is in normal call mode.17. Power adapters are designed to correctly orienta function in a vertical or floor position. The tips are not designed to hold the plug in place when plugged into the ceiling, under the table or cabinet drawer. Special disposal instructions can be found in local waste management regulations. Do not open or cripple the battery. The released electrolyte is corrosive and can cause burns or injury to the eyes or skin. Electrolyte may be toxic if swallowed. When handling batteries, make sure that there is no short circuit with conductive materials. Charge the battery supplied with this product only in accordance with the instructions and limitations set out in this manual. Precautions for users implanted pacemakers (applicable only to digital wireless phones). Wireless Technology Research, LLC (WTR), an independent research body, led a multidisciplinary evaluation of interference between portable phones and implanted pacemakers. With the support of the U.S. Food and Drug Administration, WTR advises physicians that: Patients with a pacemakerHousing to have wireless phones at least six inches from a pacemaker. They should not place wireless phones directly above the pacemaker when switched on, such as in the breast pocket. He should be using a wireless phone in his right hand across from the pacemaker. The WTR rating found no risk to passers-by with pacemakers from other people using wireless phones. About wireless phonesSuch: The same features that make a wireless phone *****so it is possible that that wireless phone calls could be intercepted by a radio receiving device within range of the wireless handset. For this reason, you should not think of wireless phone calls as private as those on cable phones. Electrical power: The telephone base of this cordless phone must be connected to a working electrical outlet. The electrical outlet should not be controlled by a wall switch. Calls cannot be made from a wireless phone if the phone base is disconnected, turned off, or the power is cut off. Potential TV interference: Some wireless phones operate at frequencies that can cause tv sets and virtual screens to interfere. To minimize or prevent such interference, do not place the wireless phone base near or part of the TV or video recorder. When interference occurs, moving your wireless phone away from your TV or VCR often reduces or eliminates interference. Rechargeable batteries: When handling batteries, make sure that there is no short circuit with conductive material such as rings, bracelets and keys. The battery or wire may overheat and cause damage. Observe the correct polarity between the battery and the charger. Nickel-metal hydride batteries: Dispose of these batteries in a safe manner. Do not burn or puncture the battery. Like other batteries of this type, if burned or punctured, they may release corrosive material that could cause injury.***Page 8 34Reports On page HS X (only for models with two or more headphones)You are calling a different handset (for intercom calls).
