If you need assistance with your Philips Respironics CPAP machine, please contact one of our customer service representatives atproducts@1800cpap.com and we will be happy to assist you. Philips Respironics System One REMstar Auto with A-Flex takes a smarter approach to the entire sleep management process. Clinically proven automated CPAP algorithms are designed to enhance even more comfort by matching pressure delivery to the respiratory cycle to provide optimal sleep therapy every night. • Whisper Smart Sound Reduction • Automatic Pressure Adjustment • Heated Tubes for Comfort Documents: Download User Guide Helpful Videos: Respironic images and text used with permission. The U.S.-made feature Easy to remove and install led dimming automatic humidifier helps create a darker space for easy detection of breathing meter Auto Titrating sleep compliance - The pressure level will automatically change throughout the night to reflect the patient's needs. Includes Respironics Performance Tubing The Philips-Respironics System One REMstar Auto with A-FLEX takes a smarter approach to the entire sleep management process. New features such as resistance control, advanced event detection and response, improved data management and reporting, A-FLEX technology, Dry Box, and System One humidity control put this CPAP machine at the cutting edge. A-Flex is designed to work with respironics' clinically proven automated CPAP algorithm to enhance even more comfort with delivery of pressure throughout the patient's respiratory cycle. Like the C-Flex, the A-Flex provides flow-based pressure relief at the beginning of exhalation. Like Bi-Flex, A-Flex softens pressure transition from inhalation to inhalation to provide added comfort in automatic CPAP mode. The pressure profile reflects the patient's breathing, and with automated algorithmic intelligence, it will respond to the patient's therapeutic needs throughout the sleep session. System One resistance control allows patients to tell the machine what type of mask you are using such as nose, full face, or nose pillow. The machine then performs adjustments for optimal flow depending on your mask. Each Respironics mask will now be equipped with a resistance control setting that tells you how to set your machine to fit your mask. Philips-Respironics has improved their event detection algorithms to include data on Snoring, Periodic Breathing (PB), Arousal Related Respiratory Efforts (RERAs), Apnea Hypopnea Index (AHI), Leaks, Clear Airway Apnea (CA), Obstructed Airway Apnea (OA), Flow Limitation (FL), and Hypopnea (HY). REMstar Auto will also record usage patterns and waveform flow data. With this information, your doctor will be able to determine the best solution for your sleep therapy better. In addition to detecting the above events, REMstar Pro will respond to FL, RERA, Snore, leak, OA, and HY. If REMstar Pro detects that one of these events will occur, it will adjust the pressure accordingly to compensate for the event. PR System One uses SD cards for data collection. Before System One, patients were required to use a special card reader when uploading sleep data to a computer. Philips-Respironics has made this process easier by using standard SD cards, giving patients the ability to use any SD reader to upload sleep data. Philips-Respironics also listened to user feedback when designing the System One Heated Humidifier. The cleverly designed water chamber works with the Built in Dry Box to virtually eliminate water getting into the machine during normal use. Even with the water chamber filled to the FULL line, the machine can be tilted and even overturned without leaking water back into the unit*. In addition, System One Humidity Control monitors room temperature, room humidity, and flow to determine what is needed to maintain your chosen humidity settings, even when environmental conditions change. Therefore, you can be sure that the comfort of your therapy will be maximized by virtually eliminating outgoing rain and condensation buildup in the tube. * PLEASE NOTE: ALWAYS drain your water space completely when transporting or moving your machine.
