Excel fill handle only copies

You're the one facing, excel's fill handle is that it doesn't work properly while the fill grip uses a useful tool. Then here's how to fix the Fill handle Excel problem. The fill handle is an extremely useful Excel tool that helps the user perform certain actions easily. This allows the user to extend a row of numbers, dates, or text to the number of cells they want. Excel fill-in is a very flexible tool and you can fill in thousands of rows right away, all you need to know is when to drag, when to click, and when to hold down the secondary key to take advantage of its potential. But in many cases, you can see that the Excel Fill Handle tool has stopped working or is not working properly. Best defined in the user experience: All I want to do is continue the sequence of numbers vertically. I've done this many times before, but now the fill sign is simply repeating the same number in each cell. I have checked that the column is formatted for numbers, the fill up is enabled and 'show pasta options' are checked, but I'm not getting any options Original Post from Excel Forums. Well, it's really very annoying, but it's not a problem that can't be fixed. Today in this article I'm put together some working solutions that will help you solve Excel fill handle not working properly issue. And also learn the tips to effectively use the fill handle in Excel. Methods of correcting the Excel fill mark do not work properly, there are no particular reasons for the Excel Fill handle that does not work. So here we have tried some possible work solutions. Try this... Method 1: Remove filters, if you've added filters, this will make the fill handle cause problems. Thus, many users claim that removing filters from columns in an Excel workbook solves the problem. After removing the filters, the fill handle started working again. Therefore, it's a good idea to check if column filters are given, such as removal, and make sure the fill handle doesn't work. However, if you are still facing the error, then follow the second solution to solve the problem 2. So here you know how to do it: Go to the Formulas tab and then go to the Calculation Options from the drop-down menu Make sure Automatic is checked. Hope it works in your case but if not then here is another trick. Also read: Method 3: Press F4 The solution is a trick to solve the Excel fill handle problem. Select the cell value and press F4 3 times, and doing the trick solves Excel fill handle question. Well, these are some of the work solutions Excel Fill Handle Problem. But if following the specified manual solutions still faces the issue, you can use the automatic MS Excel repair tool. However, follow the tips that will help you with Excel Fill Handle. Well, knowing how to use it correctly download is also important to avoid the irritating issue. Best bets in Excel Fill Handle Effectively 1: Copy values As mentioned above, it's just as important to know how to use the fill handle to copy values early. To do this, click to select the value you want to copy, and then hold down the fill sign. Then hold down the left mouse button and drag it in the right direction. In this way, Excel copies values to the selected cells. Now use the fill handle to copy values immediately. To increase the values, enter enough values to distinguish the sample. For example - You can enter A1 and A2 to capture the sample, which increases from 1 to 1, 2, 3, and so on. But if you type 1 & 3, the fill mark is 2 – 1, 3, 5 and so on now, hold down Ctrl as you drag the charging signal, which also forces an incremental sequence. 2: Take drop-down help Well, the filler handle alone doesn't always do what you want. So, if that's the case, there are two options: right-click the fill handle > drag to appear on the shortcut menu. Or, to display the shortcut menu, left-click and drag. However, not all settings apply to the source value. So define the copy operation after dragging. If you select Series, Excel displays the dialog box in the following image. Use this one dialog box to create any series. Use the Series dialog box to manage heavy series. 3: Double-click In some cases, the target range is large enough for the fill handle to become bit-in. Well, it's kind of hard to imagine him pulling the charging handle to thousands of rows. Therefore, instead of dragging, double-click the fill mark. Here are some simple rules to follow: If you double-click the fill handle, Excel uses the values in the left column to determine how far to copy, and Excel stops as a blank cell. If there are no values to the left, Excel will use the values in the right column. If there are no values to the left or right, this trick does not work 4: Include text If you enter text with a number, excel's fill mark will allow the word for the future. For example, Excel knows that there are only four quarters. And if you copy quarter 1 to five cells, it'll be repeated in the series. However, if you don't want to copy a series but need to copy the actual text, hold down Ctrl as you drag. A keys force Excel to do the opposite of the default behavior: The fill handle creates these sequences. 5: Insert cells Press shift while dragging the fill mark to insert the cells. For example, select A3:F3 and select , choose Insert > select an insertion option, and then click Ok. You can also hold down Shift and drag the fill handle to check the number of rows in Excel inserts. Drag to select the number of rows you want to insert. Automatic solution: MS Excel Repair Tool: Take advantage of the professionally recommended MS Excel Repair Tool to fix errors in a corrupted, corrupted, and excel file. It is easy to use and compatible with both Windows and mac operating systems. It supports full Versions of Excel and demo version is free. Steps to utilize MS Excel repair tool: Conclusion: I hope this blog will help you fix Excel fill handle not working properly issue. Use the solutions provided to resolve the problem. But if the solution does not help, then use the automatic solution, it is the best and effective for solving Problems and Errors in Excel. Also, I've tried my best to put together some effective tips that will help you work flawlessly with filling handles in Excel. If, in case you have any further questions presented, do not tell us in the comments section below, or you can also visit the patch MS Excel Ask Question Good luck .... Deb tries to fill in the record numbers automatically in a column on the worksheet; record 1 in the first cell, record 2 in the second cell, etc. Enable Fill Point is selected in Excel settings. However, if you use the AutoFill handle, you insert the same number into each cell. Deb's wondering how she can fix this. Based on the behavior described, it sounds like Deb is using AutoFill (1, 2, 3, etc.) to create a sequence (1, 2, 3, etc.) when he doesn't provide enough information to autofill to determine if that's what he wants to do. For example, type 1 in cell A1 and 2 in cell A2. If you select cell A2 and drag down using the AutoFill handle, Excel fills each cell with 2 values. Why? Because he only started by selecting one cell. However, if you select A1:A2 and then drag down, AutoFill increases the value you place in each cell. Why? Because you can analyze the data you enter in cells and determine how to fill the remaining cells series of values. If for some reason you don't want to start with two cells, simply select a cell (A2) and hold down Ctrl as you drag the fill handle down. AutoFill overrides normal normal (copy the selected value down) by forcing a sequence of numbers into the filled cells. If you're still having problems, make sure the filters are clean. If filters are turned on, they can repeat the same number, even if you select more than one cell. ExcelTips is a source of cost-effective Microsoft Excel training. This tip (11634) applies to Microsoft Excel 2007, 2010, 2013, 2016, 2019, and Excel in Office 365. You can find a version of this tip for the older menu interface in Excel here: AutoFill doesn't work as expected. Note: Video of the solution at the bottom of the post. One of my clients recently ran into a problem I'd never seen before. When you clicked a formula cell and dragged the pointer down to calculate it in multiple rows, you copied only the value. The formulas were correct, but the displayed value comes from the original cell: Solution Somehow, the calculation of the page was set to manual. To resolve this issue: On the ribbon ribbon, click Formulas Expand Calculation Options To Manually Change To Automatic All calculations must be done correctly. For more troubleshooting: If you're still having trouble dragging to fill, make sure that the advanced settings (File -> options –> Advanced) Fill handle... Check. When filtering, there may also be drag-and-drop problems for the fill. Try removing all filters, and then drag again. Again.
