## Turkish cast on with dpns

Turkish cast-on is a great method for creating seamless, even toe-up socks. It is also useful for making hoods, wallets, toys, gloves, and gloves without seams or gaps. With this step-by-step tutorial, you'll be on your way to making smooth, beautiful pieces in no time! To get started, you will need a skein of yarn and two circular needles of the same size. I used Wool-Ease® in Heather Green Forest and us size 9 needles. The length of the circulars is not important for the sake of learning, but shorter is easier to manage, so both mine were 16 inches. My needles are made of different materials to make them easier to distinguish here, but that's not necessary. If you are taking a very different meter with different types of needles, it would be better to use two of the same kind so your clothing is still. Keep the needles parallel, with the points to the right. Needle A will be on top, and needle B is at the bottom, as pictured. Make a slipknot and place it on needle B. You will wrap the thread around the back of both needles, and down over the forehead. You will do this half as many times as many stitches as you need. In this case, to get 20 total stitches, I wrapped the thread 10 times. Then pull the B needle so that the stitches are in the cable section of the needle, letting the edges stick. You'll be working the stitches on needle A first. Make sure the working thread is brought up from behind, tied across the needle A. Turn the work so needle B is on top, then drag the stitches onto the left edge of needle B. At the same time, pull the needle A until the stitches are on the wire and let it hang. Drag the slipknot from needle B. Tied along needle B. Continue to work this way, sliding the needles at every turn of the work. After several rounds, you should start to see the shape of the piece pop up. That would be the finger of a sock, the tip of a mitten, or the bottom of a bag. Turkish cast-on can also work back and forth to make hoods for sweaters. To do this, you'll start as before, but instead of working in the round, when you get to the end of needle B, you'll turn and chirp if you chirp back. This creates the perfect seamless hood shape, closed at the back and open at the front. While this casting method may seem complicated at first glance, it's actually quite easy once you get its hang of it. If you prefer not to use two circulars for your entire project, you can switch to different needles, such as DPN or a single circular for magic loop, after you have the shape specified. That's it, that's it! Go along and create beautiful seamless garments. The Turkish cast on is a great technique for avoiding most of the traditional seams. This video knitting tutorial shows how to knit a Turkish cast for, especially for rounded doll accessories. Learn how to knit a Turkish cast with double point needles from it inst... more part I Start by throwing for the required number of stitches, onto one of the double point needles. Divide these stitches between three needles by slipping 1/3 of the stitches (starting with the first stitch you throw up) onto each of the other two needles.
