About the author: William E. Boyce received a bachelor's degree in mathematics from Rhodes College, and his master's and doctorate in mathematics from Carnegie-Mellon University. He is a member of the American Mathematical Society, mathematical association of America and society for industrial and applied mathematics. He is now an outstanding professor of Edward P. Hamilton Department of Mathematical Sciences in Rensselaer. He is the author of numerous technical works on limit problems and random differential equations and their applications. He is the author of several textbooks, including two differential equations, and co-authored (with M.H. Holmes, J.G. Ecker, and W.L. Siegmann) a text about using a clone to examine the calculus. He is also a co-author (with R.L. Borrelli and C.S. Coleman) of equations laboratoryworkbook differential (Wiley 1992), which received the EDUCOMBest Mathematics Curricular InnovationAward in 1993. Professor Boyce was a member of the NSF-sponsored CODEE (Consortium for Ordinary Differential Equations Experiments), which led to the creation of the widely acclaimed ODE architect. It is also active in innovation and reform in the curriculum. Among other things, he was the initiator of the Computers in Accountancy project in Rensselaer, partly supported by the NSF. In 1991 he received the William H.Wiley Distinguished FacultyAward issued by Rensselaer. This title may belong to the next edition of this title.
