Check out the Settings menu for custom spec mode control options. 0.21.2 Fixed some errors with the jump, which created new one. Hooray! Resolved issues with the Auto Detail check box in the Settings menu 4 July stamp! And uhhh ... Yes, this is a bunch of nice server-side things for me, but I wouldn't mind the dramatically enhanced motion synchronization of 0.21.1. THAT'S VERY TRUTH. IT'S SO SOFT. Bullet delay line compensation (up to 500 m). It's almost like a real FPS. Almost. Fixed some cumbersome rotational synchronization issues that caused stray shells and grenades. Tracker bullets. EggK-47: Other bullets can also be seen. One in three. Along with the new yellow splats, more performant shell track effects for non-lethal hits! I have already noticed this, but now you can see the whole changelog ... Yes. That stupid RPEGG animation has been fixed again. That stupid flickering gun-switching animation has also been fixed. Some important server performance improvements. 0.20.2a 0.20.2 CSG1 clip and ammunition storage capacity increased. Bloom just a smidge gold SMEGG skin 0.20.1 a cropping problem with 0.20.1 has decreased steady
