Out of sync child audiobook

The groundbreaking book that explains Sensory Processing Disorder (SPD) – and offers a drug-free approach that offers hope to parents – is now revised and updated. Do your child exhibit... Too responsible - or insufficiently responsible - to touch or move? A child with the SPD can be a sensory avoider, giving up touch, refusing to wear certain clothes, avoiding active games – or he may be a sensory ignorer, needing a jump to begin to get moving. Too responsivity – or insufficiently responsible – to the sound, sights taste, or smell? She can cover her ears or eyes, be a picky bear, or seem to be given sensory nuances. Craving for a sense? The sensory craver never gets enough of some senses, such as dirty play, spicy food, noisy action, and open-ended movements. Bad sensory discrimination? She may not feel the difference between objects or experiences – doesn't know what she's there unless she looks and can't feel when she falls or how to catch herself. Unusually high or low activity levels? The child can be constantly go-wearing from everyone around him – or move slowly and tire easily, showing little interest in the world. Problems with posture or mechanical coordination? He can redneck, move awkwardly, seem careless or accident-aneged. These are often the first clues to sensory processing disorder – a common but often misdiagnosed problem in which the central nervous system misinterprets messages from the senses. Out-of-Sync child offers comprehensive, clear information to parents and professionals – and drug-free treatment approaches for children. This revised edition includes new sections on vision and hearing, picky eaters, and coexistence disorders such as autism and Asperger syndrome, among other topics. Out-of-Sync Child broke a new foundation by identifying sensory processing disorders, a common but often misdiagnosed problem in which the central nervous system misinterpreted messages from the senses. This recently revised edition features additional information from recent research on visual and auditory deficiency, motor skills problems, nutrition and picky eaters, ADHA, autism, and other related disorders.
