This port is mainly for use on flat surfaces. Can I add another panel to Extra-Wide Gate to make it bigger? We do not sell additional panels for this port because changing the port in any way can compromise its safety. Can I replace a broken dashboard? The broken plate cannot be replaced because it is possible that the panel(s) will not be correctly re-attached, again affecting the safety and structure of the port. © 1996-2014, Amazon.com, Inc. or its affiliates © 1996-2014, Amazon.com, Inc. or its affiliates Sometimes the space you need to discount for your pet has a door box or huge void that makes it impossible to fence with a standard pet gate. Fortunately there are more wide pet doors addressing this need. Standard pet doors are designed to fit the width of an average door, which is 34 inches. This width just does not cut it for use in other parts of the house that may need to be closed. A wider pet gate is required for use in wider corridors, or of course in open concept living areas. All additional wide port models have adjustable widths so that they can adapt to fit multiple holes. On this page, we check out some of the best wide pet portals available to hopefully help make your search a little easier. Hopefully the comparison chart above is useful in getting a quick sense of the variety of extra wide pet doors available at different price range. Below we'll highlight a few of the most popular and deeper options for their features. Regalo's 192-Inch Super Wide Gate and Play Yard are kings of width as far as pet doors go. At full width, this gate has an unprecedented width of 16 feet. In addition to operating as a port, it can also be configured to form a 19 square foot play pen. Durability is a major concern for the design of this port as well. It has a the whole steel that is meant to stand up to wear and tear. Finally, this model does not have PVC and meets the safety standards set by the American Society for Testing and Materials. See full customer reviews and prices on Amazon. Amazon. North States Supergate Deluxe Décor Metal Gate is not only a functionally great pet portal, but it's also really stylish. Lets go through the first function. This port is strong due to its metal construction. Its adjustable design allowed it to extend the distance from 38.3 to 72 inches wide; it's a maximum width of 6 feet! The model also has an extremely wide outer port, allowing users to have 25.5-inch space passing through when the port is open. It's 30 inches tall. Another virtue of this model is its flexibility in setting up. Because of the convenient pivot points on the gate panels, this port can be mounted straight through or angled. Now for the style points. A curved port panel lends quite a bit of elegance to this design, and the matte bronze finish makes it look more premium. This is a rare pet gate that will not cramp your home style. If you are interested in seeing more ports like this, please check out our article on metal walking through the gate. Note that this model is only 20 inches taller and is targeted for use by cats or dogs of small to medium size. Beautifully constructed of hardwood and metal, its design creates very clean, modern lines. Because this is a pressure-mounted door, the gate requires a large amount of stress to be placed on the panels to maintain a tight fit when installed properly. When installing ports, you don't want to start with tightly equipped panels into your space. You might actually want to have it fit your space a little loose, with lightweight rubber bumpers brushing the surface on each side. Once you lock the lock handle down into place, it will create the necessary stress/pressure by touching the plate out a bit. If you originally had it to be into space too tight, there is nowhere for that strain to go and will lead to cracked plastic or wear. This can cause the handle, slide and/or device to and the gate will no longer hold pressure. How do I get hardware out from between the tables of my Supergate? The best way to remove hardware and foam is to place the gate on a flat surface, such as the floor. Extend the top panel out as much as possible. You may need to use your finger to go through the holes to move the hardware into a position that will allow you to extend the top panel. Plastic fabrics are slightly flexible and there are some that allow you to either lift on the top fabric or push down on the lower fabric. You can do this to create somewhat of an airbag, allowing the pieces to slide towards the frame of the gate. Then you can slide them out.
