She was born Gloria Watkins, but chose the name Bell Hooks to highlight the point: What's the name? His works range from a variety of subjects, focusing mainly on race, gender equality and society. He was heavily influenced by revolutionary thinkers like Paulo Freire, Martin Luther King Jr. and Malcolm X. Eating The Other has in some ways summed up his feelings and knowledge of that dynamic society. The main point of the essay is that those who are part of the dominant layers are enticing to the exoticity of the other. They believe, either on the basis of facts or social lore, that the joy of having sexual relations with another is beyond what they get from their class. Hooks says that studying the world of difference, the body of the Other, provides a greater, more intense pleasure than any that exists in the ordinary world of its own racial group. These white men claiming the body colored other instrumentally, as explored in the landscape, are seduced by the fact that it is rare, indeed frowned upon, for their social class to engage in such activities. They get joy sexually and psychologically by exploring this uncharted landscape and exerting their dominance over it. In this way, they drive home to the point that they are in control and feed their individual primitive desires and collective egos to their social class. Hooks clearly means the Other to be someone outnumbered. Given his background, another characterizes them in African-American society. But it's not confined to American society. The second represents all those who have been given a raw deal in society. They are so-called blacks, Hispanics, marginalized and all others who are considered different from mainstream society. The second argument is that the other is not only different, but it is also considered worse for those who consider it second. This applies, then, to other roles not only to the above, but also to women, members of relatively smaller religions and young people. It would be disturbing, so because it rings true and it is taboo in society, in relation to the article. Hooks also discusses changing other. He says that those who are different and exotic add spice to an otherwise taste mainstream society. Their ways and practices are considered first arcane and incomprehensible, but slowly making practices mainstream, either subconsciously, in the form of modified practice or, consciously, in the form of alternative entertainment. In society, it is clear that [] the black body that was most coveted for its work in slavery, and it is this body that is most represented in contemporary pop culture as a body that must be monitored, emulated, desired, [and] possessed. All in all, Hooks' views, as expressed in Eating Second, have an extreme view of the mainstream need to exert dominance over those they consider different, and association, worse. The second, hooks, is a common African-American who tolerates White American arrogance. They have repeatedly faced being reduced to resources that make society more exciting for those mainstream, something fun, but not necessarily alive.
