A hand-spun base and hat make this lamp really unique. Enjoy the relaxing speed of this classic version of Timeless Lava® Lamps. White wax/triangular colored glass globe/volcanic dequel base and clear liquid with cap This bulb works in 14.5/20 oz lava® lamps. Choose a position for your lamp on a level surface in a room with yellow wax/blue liquid/silver base temperatures between 20 and 24°C or (69 to 75°F). Keep the lamp well away; Slow operation to prevent cold hot spots to prevent breakdowns children under 14 years of age do not place on carpets or block ventilation spaces under the lamp to prevent fading drafts to prevent cold spots. The set-up and warm-up put the bottle at base with screw caps on top. if Please rotate a little if you don't sit straight. Then plug it in and turn it on. NB. It is normal for glass to have small air bubbles and molding marks. The warm-up takes between 1 and 3 hours depending on the size of the model and the temperature surrounding it. Stalmitte shape can be formed during the warm-up process, they will then melt and lava will flow. Operation Your Mathmos lava lamp will work best after being used four or five times. For the first few times, you can see small air bubbles in lava. Please do not leave your lava lamp for more than six hours a day; This will prolong the life of your lamp. Overheating will reduce the light of the lamp's life. Overheating is happening when there are a big bubble or many small ones. Never shake or shake the lamp when it is in use or still warm as it causes an irreplaceable cloud. It is normal for the base to be too hot. Replacement When your lava lamp has finished your life it will start to go cloudy, the color may fade and it won't move as well as it once did. It will be after about 2000 hours of operation. You can then buy a new bottle on www.mathmos.com in the existing colors available. Please note that we do not refill the bottles and please open the bottle or add liquids. If the bulb is running please replace it with one of the same type and watt. Only the right bulbs fit, as stated on the label in the base. Re-bulbs can be purchased on www.mathmos.com as many replacement parts. Safety This lamp has passed the respective safety standards and carries the country's statutory guarantee of purchase. Liquids in lamps are not dangerous and can be disposed of normally. Never use a lamp if the bottle has been dropped as it will cause weakness in the glass, get a replacement bottle and dispose of the old. Do not leave the lamp neglected with young children. If liquid is accidentally swallowed, drink plenty of water. If it dropped on the skin or had contact with the eyes pour over cold water. Please visit the doctor if any symptoms appear. Please these directives must be retained for future use. If you have further questions about your lava lamp please visit Q. Why is my lava lamp cloudy? Question. Why are there glasses and bubbles in the glass of my lava lamp? A Mathmos lava lamp bottles are manufactured in one of the highest quality automatic bottling factories in Britian. Small bubbles are a normal part of this manufacturing process, it is not a mistake. Glass flaws - plugged glass - bubble glass - small bubbles glass - bubble bottles - bottle bubbles q. What are the differences in quality between a Mathmos lava lamp and others? Without. A different lava formation giving better lava flow, longer life, clearer fluids and more vivid colors. Metal parts are A thick, high-grade metal allows us to hand them to polish for a higher glow. Our bulbs are taking directional heat away from the base and directing the light into lava. We have a high standard of safety and quality audits have been constructed by many different bodies. We offer a comprehensive range of spare parts unlike other throw products. We have 56 years of British manufacturing excellence. Question. How long should it take to heat my lava lamp? A. Lava lamps should start working within an hour and within half an hour of turning them on. First they will form stalmitte shapes, then they will start to shape lava lamps. Please note, it will take longer to heat the new bottles (up to three hours), but the heating time will be reduced after several uses. If your lava lamp is not hot at this time, it may be positioned in the wrong place or the room may be very cold. Lava lamps should be positioned away from drafts and air conditioning. The room should be at least 20 degrees centigrade. How long hot - how long to start - lava lamp time start - lava lamp time q hot. Is my lava lamp just sitting on top of a big bubble bottle that doesn't move? Without. Lava lamps are hot. It could have been at a very long time (over 8 hours), so please turn it off and let it get too cold. Or it is positioned in a room that is very hot (over 24 degrees) or next to the heater. Please reinstall your lamp. Lava stuck on top cue. How should I recycle my lava lamp bottle when it reaches the end of my life? Without. Please make a hole in the metal cap with a sharp point, then pour the liquid. The bottle can then be recycled through your local recycling center. Throw the bottle - settle the bottle cue. Can I buy new liquids for my lava lamp? A. Bottles of lava lamps are a sealing unit and should not be tampered with. We do not sell liquids separately, but you can buy a new bottle and material for Mathmos lava lamps here. Lava Lamp Liquid - New Liquid Lava Lamp - Refill - Buy New Liquids - Buy New Wax - Buy New Lava Q. Why doesn't my lava flow/flow? A. Check that your bulb is working Check you have positioned the lamp away from the draft, air conditioning or window. Try the lamp in a new position in the room. Make sure the room is at least 20 degrees centigrade. It will take longer to heat the lamp for some time first; Each time run the lamp for 4 - 6 hours. If you have an old base check then the correct light source is fit: see the Bulb section for possible bulbs here. Check there is a coil at the bottom of the bottle. Question. Why isn't my bottle sitting directly in the base? A bottles are now supplied with a lip which runs around the lower part of the bottle, to ensure it will sit directly in the base. When the bottle is placed at the base, it should sit safely, although the bottle Transferring will still be possible Side to side and shadow gap may appear. There are minute variations in bottle and base size over time so it may be that sometimes some older products don't fit into a new bottle base. If your bottle is not sitting in the base, please contact our customer service team. wonky lava lamp - funny bottle - bottle funny cue. How long do lava lamp bottles last? Bottles of a Mathmos lava lamp are for use for about 2000 hours. Then you can buy a replacement bottle here. Lava lamp age-age lava lamp-lava lamp last q. If my lava lamp is going on and is now cloudy, what should I do? A. The cloud in a bottle that is in use or is still moved when heated is irreplaceable. You can try and run the bottle for some time to see if it will improve. If this does not help, you can buy a new bottle here. Question. Why don't you make replacement bottles in the colors I want? A. Mathmos has created a large number of colourful forms in our long history, it is not possible to keep all colours in stock. Please choose from the current limit and sign up on our social media channels to be notified of the limited release of other colors. Bespoke Refills - Bespoke Colours - Custom Colours - Bottle Colours - Custom Lava Colours - Bespoke Bottle Colours - Special Colors Q. Do you provide custom refills? Without. We are not able to offer this service on an ongoing basis, but if you sign up for our social media channels we may release selected annual dates for collectors to re-fill bottles. Bespoke Refills - Bespoke Colours - Custom Colours - Custom Refills - Bottle Colours - Custom Lava Colours - Bespoke Lava Colours - Bespoke Bottle Colours - Special Colors Q. Why has my lava lamp created a strange stalmitte shape? Without. This warming up is a normal part of the process. Please leave it for a long time and then it will start to make moving lava shape. Strange lava - lava sticks q. Why can I see bubbles in lava? A. Small bubbles in lava are normal, especially when you first get the lamp. Bubbles will be reduced as you use this over time. Question. Why has the liquid in my bottle become clear? Without. Over time the dye in the lava liquid will fade, especially if it is positioned directly in sunlight. If you were purchased within the lamp warranty and the instructions were followed please contact our customer service team. You can buy a new bottle here if your lamp is out of warranty. Liquid clear - clear liquid q. The liquid level of my lamp is also low. Can I top it up? Without. No mathmos lava lamp bottles are sealed units. Do not try to unload the cap and do not top up the liquid on any account. The heat from a lava lamp could cause the liquid to expand and topping it to fill the lamp and put pressure on the glass as the fluid expands. If you're happy with your bottle So buy a new one here. Buy. Low - Liquid Refill - Top Up Liquid Q. Why is the wax glued to the edge of the bottle? Without. If you use a lamp several times, this wax should be included in the rest of the lava. If this does not happen and your lamp was purchased less than a year ago, please contact us here. If you have lamps more than a year old please buy a replacement bottle here. Question. Do you offer any colors other than the colors shown on your website? Without. No, but we constantly add new colors so sign up to your mailing list to inform them about the new colors they release. We sometimes issue short run of special colors, please sign up on our social channels to be notified. Bespoke bottles - special bottles - custom bottles - custom color cue. Why can I see the metal spring coil floating in my lava lamp bottle? Without. Metal spring is an essential component of a lava lamp bottle. However, it should be sitting under the bottle. Run the lamp for several hours and hopefully spring will settle in its right place. Metal coil in the bottle - metal spring in bottle cue. Why can I see a foreign object in my new lava lamp bottle? Without. The bottle should have nothing but lava and liquid, please contact customer services here. Hair in lava lamps - hair in bottle - dirt in bottle - dirt in lava lamp cue.
