If you see this post, it means that we have problems downloading external resources on our website. If you are behind a web filter, make sure that domains *.kastatic.org *.kasandbox.org are blocked. If in doubt, you can always use substitution. Undimming is easier than integration, so if stuck, try the opposite, e.g. sin and cos are related (remember that minus!), so if you integrate the sin function, start by undieving the corresponding cos function. Finally, check your final answer by undilying it. I taught my classes to integrate using the reverse chain rule and giving them enough practice to feel confident about the method, I've used this spreadsheet to encourage them to spend less time and steps. My classes enjoy the challenge of trying to replenish the sheet over time - you can always change the time limit for weaker/stronger groups. The solutions are attached. Note that this table assumes that students know how to integrate the function e^x and $1/x$.[Read more](#)[FreeReport](#) problem
