William R. Miller, PhD, is emeritus distinguished professor of psychology and psychiatry at the University of New Mexico. He presented the motivational interview in a 1983 article in the journal Behavioral Psychotherapy and in the first issue of Motivational Interview: Helping People Change, written by Stephen Rollnick, in 1991. Dr Miller's research focused mainly on the treatment and prevention of addictions, with broader implications for the psychology of change. He holds the International Jellinek Memorial Award, two career achievement awards from the American Psychological Association and innovators in the Fight Against Substance Abuse Award from the Robert Wood Johnson Foundation, among many other honors. The Institute for Scientific Information lists Dr Miller as one of the most cited scientists in the world. Stephen Rollnick, PhD, is professor of communication in healthcare at the Faculty of Medicine at Cardiff University in Cardiff, Wales, United Kingdom. For many years, he worked as a clinical psychologist in mental health and primary health care and then turned to how a motivational interview could be used to improve demanding consultations on health and social care. Dr. Rollnick's research and guidelines for best practices have been widely published, and his work on implementation continues, focusing on children with HIV/AIDS in Africa and on pregnant adolescents in disadvantaged communities. Drs. Rollnick and Miller are corecipients of the Engel Award from the American Academy for Communication in Health Care. Motivational Interview in... Henry, LMSW, Department of Social Work, California State University, Bakersfield (second edition) Motivational Interviews is one of the few texts that I can assign to my MSW students year after year for my clinical practice course and I know they will love them as much as I do. Some of my students have 20 years of social service experience and some are fresh from their BSW programs, but they all find something practical, insightful and useful in the text. No other text does a better job of helping people understand how to work with ambivalence in clients. I like how I don't have to spend time in class coming up with examples that bring concepts down to earth -- the book is full of believable, enlightening case studies and sample dialogues.
