Did you ever wake up to one of those days where everything is a problem? You have 10 things to do, but only 30 minutes until your bus leaves. Is there enough time? You have 3 shirts and 2 pairs of pants. Can you make 1 good outfit? Then you start to wonder: Why does

everything have Maths Curse be such a problem?

Why do 2 apples always have to be added to 5 oranges? Why do 4 kids always have to divide 12 marbles? Why can't you just keep 10 cookies without someone taking 3 away? Because you're the victim of a Math Curse. That's why. But don't despair. This is one girl's story of how that curse can be broken.

Math goes berserk! It's fun, but I think my math teacher dad loved this a whole lot more than my kid did. View 1 comment. Jun 23, Darlene rated it it was amazing Shelves: childrenlibrary. What a fun book! I loved the illustrations and the convoluted way of looking Maths Curse math. It is how I have always viewed the subject.

Take for instance word problems. Bane of my existence! Take the story of the trains leaving their stations heading toward each other. The books always tell Maths Curse speeds of the trains and pretend that nothing Maths Curse could ever be a variable. Such as: Supposing that one engineer is chewing Maths Curse. And the other train has just hit a snowstorm icing the tracks. Then add to that What a fun book! Then Maths Curse to that the fact that the engineer chewing the gum was doing so because he forgot to eat breakfast.

Add to that the fact that the engineer has blood sugar problems and he eventually faints and his foot leaves the pedal. At the same time the train caught in the snowstorm has slid off the right track and onto the dummy tracks.

The fainted engineer's locomotive's emergency brake takes over. Where is the satisfying ca-boom? Oh, then the teachers tell you that math problems help you in real life. Take for instance, figuring out how much paint you need to cover a certain amount of wall space. You do the math and find that by doing so you have saved yourself enough money to go see that newest movie and have snacks. But as you are doing the painting, the dog spots the cat and chase ensues.

Said cat lands in the roller pan splashing said dog who blindly knocks over a Maths Curse gallon of paint. How did all that wonderful math do for you, heh?

No show. Now back to the book. How many teeth and the shirt your uncle sent mean nothing as teeth brushing takes a minute supposing he isn't checking out the shirts while brushing, splashing two out of five shirt with toothpaste. Maths Curse course, you never plan to wear the shirt your uncle sent, except on days when Maths Curse know you Maths Curse see Maths Curse. Of the two left one is now wrinkled having crumpled Maths Curse while brushing your teeth in that Maths Curse of haste.

That leaves a mess on your bed and only one shirt. Where's the problem? The milky feet may mean a squishy walk Maths Curse the bus. I believe the bus driver's name is true, well, actually Drew, but since there is always shouting on Maths Curse who heard it right? The inkblot is the child's hand Maths Curse he sinks into his seat, he bit off the end of a Maths Curse in his anxiety.

Body parts are everywhere. This kid is insane! So when you might think there is a logical answer to how many body parts an individual might have consider the kid with webbed fingers, and the one whose brother chopped off Maths Curse pikie during that kitchen battle years ago I know there are ways to figure things out in that perfect world that mathematicians live in, but the real world can make you crazy!

Oh, and we were already told that you are only getting two slices of pizza so I would assume that the pie tastes greater. I'll take Reese's Pieces, please. Fourafish sounds like the math that politicians use. On the Binary planet they use one guy as the bowling pin and another guy as the ball but the gravity of the situation leaves them all up in the air laughing.

Who needs a three-hole ball? I was challenged by Maths Curse equation that included age and shoe size and think the kid is wise to choose licorice. Besides he may need to wear this Maths Curse again tomorrow if mom doesn't get around to the laundry; a kid Maths Curse young Maths Curse to not know fractions can't possibly know which cup to measure the detergent in.

The conundrum of the presidents left me weak with LOL. Beside let's just get Benjamin to decide! The math story to put one to sleep and induces a nightmare that solves the whole problem. Nice thing is he Maths Curse has a wrinkled shirt. That begins his next day.

Math Curse - Wikipedia

Math stories are such a fun way to engage kids in math learning, as well as help them see math in the world around them. Maths Curse can make math come alive and get kids excited! One of my favorite and highly engaging stories is Math Curse by Jon Scieszka. This hilarious tale can be enjoyed by kids of all ages. This is such a fun book, and I love reading it with upper elementary kids all the way through middle school!

And actually, I have Maths Curse it with 9th graders as well! To encourage and help you incorporate great books into math class, I am putting together lessons, activities and projects to Maths Curse along with some of my favorite books. First up: I wanted this to be used with as many kids as possible, so there are a couple different things included in this packet.

For Maths Curse kids, there is a page with Maths Curse of Maths Curse math problems encountered in the story for students to solve as well as an answer key. There is also a worksheet that walks students through writing their own story problem. If you have older students, you can take it a step further and help them write their own math curse story. A student guide and rubric is included, as well as some teaching tips with ideas for how to use this project.

It also includes a story plan that students can use to jot down their ideas and come up Maths Curse an outline for their story! Students will be able to create a contextualized problem and provide alternative strategies for Maths Curse it. This activity is based on the picture book: Maths Curse.

Maths Curse A maths teacher, Mrs. Fibonacci, curses her Maths Curse when she tells them maths is everywhere and almost everything can be seen as a maths problem. The main character spends torturous and humourous week solving problems until she finds a way to escape. Log in or register to create plans from your planning space that include this resource. Use the resource Maths Curse. Home Resource Finder. This is an activity based Maths Curse the picture book Maths Curse.

NA Use a range of additive and simple multiplicative strategies with whole Maths Curse, fractions, decimals, and percentages. AO elaboration and other teaching resources. Specific Learning Outcomes. Description of Mathematics. The process of creating a problem for others to solve supports flexibility in understanding the elements within a problem. The different areas of mathematics are represented by different types of problems probability within statistics, area within measurement etc.

However, the four operations remain the tools for solving any problem. Required Resource Materials. Lesson Sequence: Prior to reading, Maths Curse up by asking students to brainstorm about all the maths they may have done today before getting to maths class. Add your own examples. Make a note of the strand beside each example: Number, Algebra, Measurement, Geometry, Statistics, and some of the sub categories: fractions, time, area, graphing, probability etc. Maths Curse the book with your students.

As you Maths Curse the story, relate the examples and problems to the strand labels and take some time to solve a few problems together. What was the maths involved? How did the presentation support the humour and the maths? What makes for an engaging problem? After reading, assign students in small groups a section of the class timetable.

Their assignment is to create an interesting and funny problem related to the activities that happen during that section of time in the school day. Construct a set of criteria for what the problem must include, the level at which it is to be pitched and the presentation requirements for publication. Ask students to solve their problem thinking about two different ways someone could approach and solve.

Once problems have been constructed and trialed, publish the set as a class book with room for strategy explanations and recording to be added as other students solve them. Printer-friendly version.
