If such a sign comes Messages: The Worlds Most Documented Extraterrestrial Contact Story from the heavens during the next decade, China may well hear it first. To hear more feature stories, see our full list or get the Audm iPhone app. But in other ways Liu is a strange choice to visit the dish.

He has written a great deal about the risks of first contact. In recent years, Liu has joined the ranks of the global literati.

Barack Obama told The New York Times that the book—the first in a trilogy— gave him cosmic perspective during the frenzy of his presidency. No civilization should ever announce its presence to the cosmos, he says. Any other civilization that learns of its existence will perceive it as a threat to expand—as all civilizations do, eliminating their competitors until they encounter one with superior technology and are themselves eliminated.

En route to our planet, the extraterrestrial civilization disrupts our particle accelerators to prevent us from making advancements in the physics of warfare, such as the one that brought the atomic bomb into being less than a century after the invention of the repeating rifle. Science fiction is sometimes described as a literature of the future, but historical allegory is one of its dominant modes.

This past summer, I traveled to China to visit its new observatory, but first I met up with Liu in Beijing. The pricey shoot ended in mid, but the film is still in postproduction. At one point, the entire special-effects team was replaced. After a translator relayed my question, Liu stopped smoking and smiled. China poured more concrete from to than America did during the entire 20th century. The country has already built rail lines in Africa, and it hopes to fire bullet trains into Europe and North America, the latter by way of a tunnel under the Bering Sea.

The skyscrapers and cranes dwindled as the train moved farther inland. Those hills grew steeper as we went west, stair-stepping higher and higher, until I had to lean up against the window to see their peaks. Every so often, a Hans Zimmer bass note would sound, and the Messages: The Worlds Most Documented Extraterrestrial Contact Story pane would fill up with the smooth, spaceship-white side of another train, whooshing by in the opposite direction at almost miles an hour.

A government-imposed social transformation appeared to be under way. Signs implored people not to spit indoors. Two hours into what was supposed to be a four-hour drive, he pulled over in the rain and waded 30 yards into a field where an older woman was harvesting rice, to ask for directions to a radio observatory more than miles away.

After much frustrated gesturing by both parties, she pointed the way with her Messages: The Worlds Most Documented Extraterrestrial Contact Story. We set off again, making our way through a string of small villages, beep-beep ing motorbike riders and pedestrians out of our way.

Some of the buildings along the road were centuries old, with upturned eaves; others were freshly built, their residents having been relocated by the state to clear ground for the new observatory.

A group of the displaced villagers had complained about their new housing, attracting bad press—a rarity for a government project in China. Western reporters took notice. The search for extraterrestrial intelligence seti is often derided as a kind of religious Messages: The Worlds Most Documented Extraterrestrial Contact Story, even within the scientific community.

It is motivated by deep human desires for connection and transcendence. It concerns itself with questions about human origins, about the raw creative power of nature, and about our future in this universe—and it does all this at a time when traditional religions have become unpersuasive to many. Why these aspects of seti should count against it is unclear. Nor is it clear why Congress should find seti unworthy of funding, given that the government has Messages: The Worlds Most Documented Extraterrestrial Contact Story been happy to spend hundreds of millions of taxpayer dollars on ambitious searches for phenomena whose existence was still in question.

The expensive, decades-long missions that found black holes and gravitational waves both commenced when their targets were mere speculative possibilities. That intelligent life can evolve on a planet is not a speculative possibility, as Darwin demonstrated.

Indeed, seti might be the most intriguing scientific project suggested by Darwinism. Even without federal funding in the United States, seti is now in the midst of a global renaissance. In their exile, they have become philosophers of the future. They have tried to imagine what technologies an advanced civilization might use, and what imprints those technologies would make on the observable universe. They have figured out how to spot the chemical traces of artificial pollutants from afar.

The team performs more seti observations in a single day than took place during entire years just a decade ago. Messages: The Worlds Most Documented Extraterrestrial Contact Story beam from a giant laser array, to be built in the Chilean high desert, will wallop dozens of wafer-thin probes more than four light-years to the Alpha Centauri system, to get a closer look at its planets.

He visited the Chinese dish while it was still Messages: The Worlds Most Documented Extraterrestrial Contact Story construction, to lay the groundwork for joint observations and to help welcome the Chinese team into a growing network of radio observatories that will cooperate on seti research, including new facilities in Australia, New Zealand, and South Africa.

When I joined Siemion for overnight seti observations at a radio Messages: The Worlds Most Documented Extraterrestrial Contact Story in West Virginia last fall, he gushed about the Chinese dish. Radio transmissions are forbidden near the dish, lest scientists there mistake stray electromagnetic radiation for a signal from the deep.

Supercomputers are still sifting through billions of false positives collected during previous seti observations, most caused by human technological

interference.

My driver was on the verge of turning back when my phone reception finally began to wane. High winds were whipping between the Avatar-style mountains, making the long bamboo stalks sway like giant green feathers. A downpour of fat droplets began splattering the windshield just as I lost service for good. The week before, Liu and I had visited a stargazing site of a much older vintage. It was likely interpreted as an omen of catastrophe, perhaps an ensuing invasion.

The starry globe was stolen in after an eight-country alliance stormed Beijing to put down the Boxer Rebellion. The instruments were eventually returned, but the sting of the incident lingered. Back when the ancient observatory was built, China could rightly regard itself as the lone survivor of the great Bronze Age civilizations, a class that included the Babylonians, the Mycenaeans, and even the ancient Egyptians.

But China had lasted. He blamed the Confucian emphasis on tradition. A large landmass ruled by long dynasties may have encouraged less technical dynamism than did Europe, where more than 10 polities were crammed into a small area, triggering constant conflict.

As we know from the Manhattan Project, the stakes of war have a way of sharpening the scientific mind. Still others have accused premodern China of insufficient curiosity about life beyond its borders.

Notably, there seems to have been very little speculation in China about Messages: The Worlds Most Documented Extraterrestrial Contact Story life before the modern era. Whatever the reason, China paid a dear price for slipping behind the West in science and technology. After sending laborers to the Western Front in support of the Allied war effort during World War I, Messages: The Worlds Most Documented Extraterrestrial Contact Story diplomats arrived at Versailles expecting something of a restoration, or at least relief from the unequal treaties.

Deng evinced a near-religious reverence for science and technology, a sentiment that is undimmed in Chinese culture today. It remains an open question whether Chinese science will ever catch up with that of the West without a bedrock political commitment to the free exchange of ideas. China has learned the hard way that spectacular scientific achievements confer prestige upon nations. China has largely focused on the applied sciences. Now China is bringing its immense resources to bear on the fundamental sciences.

It is also eyeing Mars. Nothing except, perhaps, first contact. At a security station 10 miles from the dish, I handed my cellphone to a guard. A different guard drove me on a narrow access road to a switchback-laden stairway that climbed steps up a mountainside, through buzzing clouds of blue dragonflies, to a platform overlooking the observatory.

It was Nan who had made sure the new dish was customized to search for extraterrestrial intelligence. Apart from microwaves, such as those that make up the faint afterglow of the Big Bang, radio waves are the weakest form of electromagnetic radiation. Collecting these ethereal signals requires technological silence. After making a shortlist of candidate locations, Nan set out to inspect them on foot.

Hiking into the center of the Dawodang depression, he found himself at the bottom of a roughly symmetrical bowl, guarded by a nearly perfect ring of green mountains, all formed by the blind processes of upheaval and erosion. After the dish is calibrated, it will start scanning large sections of the sky.

Liu Cixin told me he doubts the dish will find one. If a civilization were about to be invaded by another, or incinerated by a gamma-ray burst, or killed off by some other natural cause, it might use the last of its energy reserves to beam out a dying cry to the most life-friendly planets in its vicinity. Previous observatories could search only a handful of stars for this radiation. In Beijing, I told Liu that I was holding out hope for a beacon.

I told him I thought dark-forest theory was based on too narrow a reading of history. It may infer too much about the general behavior of civilizations from specific encounters between China and the West. Across history, it is easy to find examples of expansive civilizations that used advanced technologies to bully others. But even if these patterns extend back across all of recorded history, and even if they extend back to the murky epochs of prehistory, to when the Neanderthals vanished sometime after first contact with modern humans, that still might not tell us much about galactic civilizations.

And no civilization could last tens of millions of years without learning to live in peace internally. The Milky Way has been habitable for billions of years. Anyone we make contact with will almost certainly be older, and perhaps wiser. Moreover, the night sky contains no evidence that older civilizations treat expansion as a first principle.

Messages: The Worlds Most Documented Extraterrestrial Contact Story the self-replicating machinery required to spread rapidly across billion stars would be doomed by runaway coding errors. Or maybe civilizations spread unevenly throughout a galaxy, just as humans have spread unevenly across the Earth.

Some SETI researchers have wondered about stealthier modes of expansion. Some have even searched for evidence that such spacecraft might have visited this planet, by looking for encoded messages in our DNA—which is, after all, the most robust informational storage medium known to science. Messages: The Worlds Most Documented Extraterrestrial Contact Story too have come up empty.

The idea that civilizations expand ever outward might be woefully anthropocentric. Liu did not concede this point.

To him, the absence of these signals is just further evidence that Messages: The Worlds Most Documented Extraterrestrial Contact Story are good at hiding. He told me that we are limited in how we think about other civilizations. First contact would be trickier still if we encountered a postbiological artificial intelligence that had taken control of its planet. Its worldview might be doubly alien.

Messages: The World's Most Documented Extraterrestrial Contact Story by Stan Romanek

A Must read. By Pete. For sceptics to believers. This is a must read. Also there are answers that are answered from the first book messages. This is a must read for the human race. Loved it! By Susanna. My first encounter with Stan Romanek was at an expo in Denver in November I bought Messages and devoured it.

Then read the Orion Regressions It lives up to its title, and then some. I highly recommend this book to everyone who keeps asking themselves "what the heck is Messages: The Worlds Most Documented Extraterrestrial Contact Story on with the world these days???"

By BMitchell. The other day I did something that I have not done in over 30 years Answers does a Messages: The Worlds Most Documented Extraterrestrial Contact Story job of bringing more detail to Messages, but not at the cost of boring the reader with retelling the story. The information shared here is extremely interesting and leaves me eager to pick up a copy of The Orion Regressions! Something to ponder. By A Roman. There is so much to ponder over in this book. Stan comes across as very credible.

It feels as if he is expressing himself sincerely. Even he, however, questions some of the unbelievable information he gets from Lazarus, for example. It is as if Stan is constantly proving to himself that this experience is real. Like he's always a skeptic, but the evidence around him is undeniable. I feel for Stan and his experiences -- he seems like someone who has been through so much pain. I think his feelings in all of this have been discounted by the powers that be.

How he endures it all, I have no idea. Very interesting topic. People who want evidence should read Stan's books! By Rita. I've read Messages, Orion Regressions and Answers that were written by Stan, in all the book he presents us with evidence regarding a number of his experiences. My initial interest in Messages came from the fact that he did back up his story with hard evidence and witnesses.

There's a definite change happening, many phenomenal experiences occurring and I assure you many people are feeling this happen. The more you know the better prepared you will be and Stan has the "Answers". Another Great Read by Romanek. I was pretty happy when this book finally came out. Having already read Messages and The Orion Regressions, I was hungry for any more information Stan could tell us about his experiences. In my opinion, Answers does not disappoint.

We get to hear more about Grandpa Grey as well as some extraordinary information about the Possum people. I think my favorite part of the book though, was getting to know more about the hybrid children. If you're an open minded person who knows there's got to be more going on than what we're being spoon fed by our mainstream media, this book as well as Stan and Lisa Romanek's other books Messages: The Worlds Most Documented Extraterrestrial Contact Story be just what you're looking for.

You have to read this! His best so far! By Dave G. I recommend reading them in that order. It serves as a great background. The title of this book is perfect. The answers that Stan reveals is truly out of this world. I don't want to say too much, but it involves everything you know about mystery and science fiction, but it's real! There is visitations, abductions, missing time, UFO's, Hybrid humans, time travel, a mysterious stranger, not to mention threats to Stan and his family.

I also Messages: The Worlds Most Documented Extraterrestrial Contact Story his wife, Lisa's book "From my side of the bed". As a species, humans have forgotten who they are and where they are going. It is now their time to awaken. It will pull life as you know it down to the quantum level, and, if you're open-minded enough, allow your everyday beliefs to unfold into inner and outer spaces of interminable beauty and possibility. Stan Romanek, International Bestselling Author.

May be the world's most documented extraterrestrial contactee. There are a multitude of unexplainable events involving Stan Romanek and hundreds of witnesses that continue on a near monthly basis.

This ongoing mystery is becoming more complex with each twist and turn. Aside from any individual interpretations or opinions about these experiences there is much for humanity to learn on these very important matters. Stan Romanek's case has created a stir in the scientific and UFO communities and this is an amazing look in to a mind bending and real alien abduction Messages: The Worlds Most Documented Extraterrestrial Contact Story
