Bullet Journal Printables Vector Images (over)

The Best of the Best..! Thank you indeed! I love how the clock is used in the drawing to create the body of the bird. Great idea! Very good drawing lesson, I love it! In my drawing class we are learning to draw Sulfur Crested Cuckatoos local birds your tutorial has really helped. Thank Goodness my Search engine showed me this site. It has really helped. Thanks again. Hi John, Thank you for your feedback... I can write a review...honored to.

As a person who has worked at getting even close to the results I wanted in depicting birds, I can say you really nailed the critical elements needed to achieve a high level of bird illustration. As far as projects, I have two possible bird book projects in the works. Scope being determined as we speak. Might want to talk with you about it. . . . Let me know if you ever want to chat. Thank you Tracy, Your work is amazing I have been enjoying exploring the illustrations on your site. Thank you for your support! I and delighted that you like the book so much. Would you be willing to write a review? I am now working on a new book on nature sketching and journaling. I have having a great time with it. What are your new projects. Bookmarking this page! The Learning the Feather Groups diagram of the sparrow is extremely helpful. I enjoyed your new book-fabulous sketching techniques. Photos and painting reproductions use a cool palette.

Excellent web page — really cleverly done! Nice drawings, too. All the very best with yours, John! Cheers, Katrina. Katrina, I have been exploring your website and I am really excited about your new book. I wish I had it for reference when I was working on mine. I encourage my readers to check it out and learn from those drawings. Artistic, creative, playful, accurate and alive. It really helps to be able to see into the subject. You must be able to understand the surface that is below what you are drawing. If you want to draw the feathers, you must understand the skin contours and feather tracts.

If you want to visualize the skin, you must understand the skeleton. If you want to pose the skeleton, you must feel the energy, intention and soul of the bird. Many thanks for the kind words, John. And yes, absolutely! Not in place of field observation, but to supplement and enhance it. John, Am looking forward to your book coming out soon!

The drawing moves too fast to get each step. Is there some way to do this? I had trouble with the other moving subjects in the painting lessons too. Thanks, am drawing every day now, Diane. Diane, Look for the new book in September. I am very excited about it. Reviewers have said that it has really helped them draw. If you are having trouble downloading the PDF, try clicking it and dragging it onto your desktop. Let me know if that does not work. Simply gorgeous work, and a truly beautiful tutorial. I hope to take a workshop from you! Your drawings are lovely, and depict the life and attitude of the bird. I also paint birds for a living for field guides. I had the privilege of visiting with Don Eckelberry, one of my favorite bird artists.

He is no longer living, but it is worth looking up his work if any of your email participants want to look at some of the best bird art that was produced in the past. Thank you for your kind words about my drawings. His manuscript Techniques in Bird Illustration is very helpful. Have you seen it? Please tell us about your visit with him. Where can we see some of your work? Don Eckelberry was both gruff and kind. He did not suffer fools, but was exceedingly generous with advice and constructive criticism. Don was approachable as long as you did not have an unrealistic view of your illustrating capabilities. To those who were receptive, he had nice as well as constructive things to say. That is a wonderful story. May we all move forward in our art without letting our egos block us from critically analyzing our work. It is important to keep that inner critic constructive. It should support us in drawing more, each sketch or painting a lesson for the next.

Keeping the inner critic constructive. I will be talking to my art students about that concept. Here you go! This is a great time to watch and sketch migrating hawks. I think you will find this blog helpful. For a reference people can go to you tube, google images or a stock website. I always use this site for my bird photos. I came across your site via the iPad Flipboard app. That is a very cool animation about How To Draw A Bird, and I appreciate the effort that went into putting it together. Thank you Dave, I hope it is of help to you. I scanned my drawing as I drew it and pasted them together.

Wonderful, John! I learned a bit from one of your GGAS workshops and look forward to your book. Your email address will not be published. Using Photographs to help you Understand Birds I use high-resolution photographs to help me study bird plumage. Download high resolution version for printing here: How to draw birds Once you have the basic shaped blocked in you are ready to add details on top of that framework. This is the fun part but do not skip the first steps and jump to drawing the beak and eye.

Details without structure will get you nowhere. Start with the basic Shape The most important part of the drawing is getting the basic shape right at the start. Look below the surface Underneath the feathers, a bird looks like a plucked chicken. Learn to see feather groups Studying bird anatomy will help you draw birds more accurately. Birds are shape shifters The feather groups are under individual muscular control and can be fluffed up or moved together. Please share if you like it! August 29, at pm. Would love to get one. June 13, at am. John Muir Laws says: I love the Sibley guides. They are really well done. There is an east and a west cost version. July 1, at pm. Jeanna says: Hi, I recently bought your book on how to draw birds and I love it!

May 19, at am. Juan Orozco says: This really helped i made a really cool bird. April 15, at pm. Sarah says: Incredibly helpful! April 8, at am. Step by step guidance is easy for sketch. Thank you so much. December 10, at am. Finn says: I would like to show you some pictures, of my drawings. October 14, at am. John Muir Laws says: Hi there Fin. October 17, at am. August 24, at am. Karly says: Hey Jack! June 23, at pm. Christine Barnes says: I love to observe, write about and draw flowers and other static items of nature And am progressing nicely in learning individual bird songs. June 3, at am. John Muir Laws says: I have some blog posts on that subject. Harrison Schlabach says: I love it, but there is one thing: I wish you could pause the video things Reply.

May 24, at am. May 27, at am. Danielle Thys says: I had so much fun last week, I got 7 additional people to sign up! May 21, at am. T Jones says: I would like to thank you for all that you do to teach people like me. May 5, at pm. John Muir Laws says: not yet. May 12, at am. Aristakhos says: Very useful tips, thank you. April 4, at am. Ember says: Omg, you are so talented. I would never have been able to draw that good Reply. May 14, at am. John Muir Laws says: You will see amazing changes if you start drawing on a regular basis. May 16, at pm. Moldy Potato says: its okay, I am not very good at drawing. I have been drawing for 9 years. . . Reply. May 29, at am. March 20, at pm. December 31, at pm. December 4, at pm. John Muir Laws says: wonderful. Faithful Finds. Farnlyn Creek. Five Star. Notebooks & Journals : Target

Early printed books, single sheets and images which were created before in Europe are known as incunables or incunabula. Steam-powered printing presses became popular in the early 19th century. These machines could print 1, sheets per hour, [26] but workers could only set 2, letters per hour. They could set more than 6, letters per hour and an entire line of type at once. There have been numerous improvements in the printing press. As well, the conditions for freedom of the press have been improved through the gradual relaxation of restrictive censorship laws. See also intellectual property, public domain, copyright. In midth century, European book production had risen to over, titles per year. Throughout the 20th century, libraries have faced an ever-increasing rate of publishing, sometimes called an information explosion.

The advent of electronic publishing and the internet means that much new information is not printed in paper books, but is made available online through a digital library, on CD-ROM, in the form of ebooks or other online media. An on-line book is an ebook that is available online through the internet. Though many books are produced digitally, most digital versions are not available to the public, and there is no decline in the rate of paper publishing.

This effort is spearheaded by Project Gutenberg combined with Distributed Proofreaders. There have also been new developments in the process of publishing books. Technologies such as POD or "print on demand", which make it possible to print as few as one book at a time, have made self-publishing and vanity publishing much easier and more affordable. On-demand publishing has allowed publishers, by avoiding the high costs of warehousing, to keep low-selling books in print rather than declaring them out of print. Goddess Saraswati image dated AD excavated from Kankali tila depicts her holding a manuscript in her left hand represented as a bound and tied palm leaf or birch bark manuscript.

In India a bounded manuscript made of birch bark or palm leaf existed side by side since antiquity. Each sheet typically had a hole through which a string could pass, and with these the sheets were tied together with a string to bind like a book. The codices of pre-Columbian Mesoamerica Mexico and Central America had the same form as the European codex, but were instead made with long folded strips of either fig bark amatl or plant fibers, often with a layer of whitewash applied before writing. New World codices were written as late as the 16th century see Maya codices and Aztec codices. Those written before the Spanish conquests seem all to have been single long sheets folded concertina-style, sometimes written on both sides of the local amatl paper.

The methods used for the printing and binding of books continued fundamentally unchanged from the 15th century into the early 20th century. While there was more mechanization, a book printer in had much in common with Gutenberg. Gutenberg's invention was the use of movable metal types, assembled into words, lines, and pages and then printed by letterpress to create multiple copies.

Modern paper books are printed on papers designed specifically for printed books. Traditionally, book papers are off-white or low-white papers easier to read, are opaque to minimise the show-through of text from one side of the page to the other and are usually made to tighter caliper or thickness specifications, particularly for case-bound books. Different paper qualities are used depending on the type of book: Machine finished coated papers, woodfree uncoated papers, coated fine papers and special fine papers are common paper grades. Today, the majority of books are printed by offset lithography.

Books tend to be manufactured nowadays in a few standard sizes. The sizes of books are usually specified as "trim size": the size of the page after the sheet has been folded and trimmed. The standard sizes result from sheet sizes therefore machine sizes which became popular or years ago, and have come to dominate the industry. British conventions in this regard prevail throughout the English-speaking world, except for the USA. The European book manufacturing industry works to a completely different set of standards. Modern bound books are organized according to a particular format called the book's layout. Although there is great variation in layout, modern books tend to adhere to a set of rules with regard to what the parts of the layout are and what their content usually includes.

A basic layout will include a front cover, a back cover and the book's content which is called its body copy or content pages. The front cover often bears the book's title and subtitle, if any and the name of its author or editor s. The inside front cover page is usually left blank in both

hardcover and paperback books. The next section, if present, is the book's front matter, which includes all textual material after the front cover but not part of the book's content such as a foreword, a dedication, a table of contents and publisher data such as the book's edition or printing number and place of publication.

Between the body copy and the back cover goes the end matter which would include any indices, sets of tables, diagrams, glossaries or lists of cited works though an edited book with several authors usually places cited works at the end of each authored chapter. The inside back cover page, like that inside the front cover, is usually blank. Also here often appear plot summaries, barcodes and excerpted reviews of the book. Some books, particularly those with shorter runs. As the production line circulates, a complete "book" is collected together in one stack, next to another, and another web press carries out the folding itself, delivering bundles of signatures sections ready to go into the gathering line. Note that the pages of a book are printed two at a time, not as one complete book. Excess numbers are printed to make up for any spoilage due to make-readies or test pages to assure final print quality.

A make-ready is the preparatory work carried out by the pressmen to get the printing press up to the required quality of impression. Included in make-ready is the time taken to mount the plate onto the machine, clean up any mess from the previous job, and get the press up to speed. As soon as the pressman decides that the printing is correct, all the make-ready sheets will be discarded, and the press will start making books. Similar make-readies take place in the folding and binding areas, each involving spoilage of paper. After the signatures are folded and gathered, they move into the bindery. In the middle of last century there were still many trade binders — stand-alone binding companies which did no printing, specializing in binding alone. At that time, because of the dominance of letterpress printing, typesetting and printing took place in one location, and binding in a different factory.

When type was all metal, a typical book's worth of type would be bulky, fragile and heavy. The less it was moved in this condition the better: so printing would be carried out in the same location as the typesetting. Printed sheets on the other hand could easily be moved. Now, because of increasing computerization of preparing a book for the printer, the typesetting part of the job has flowed upstream, where it is done either by separately contracting companies working for the publisher, by the publishers themselves, or even by the authors. Mergers in the book manufacturing industry mean that it is now unusual to find a bindery which is not also involved in book printing and vice versa.

If the book is a hardback its path through the bindery will involve more points of activity than if it is a paperback. Unsewn binding, is now increasingly common. The signatures of a book can also be held together by "Smyth sewing" using needles, "McCain sewing", using drilled holes often used in schoolbook binding, or "notch binding", where gashes about an inch long are made at intervals through the fold in the spine of each signature. The rest of the binding process is similar in all instances. Sewn and notch bound books can be bound as either hardbacks or paperbacks. In the most basic case-making, two pieces of cardboard are placed onto a glued piece of cloth with a space between them into which is glued a thinner board cut to the width of the spine of the book. After case-making the stack of cases will go to the foil stamping area for adding decorations and type.

Recent developments in book manufacturing include the development of digital printing. Book pages are printed, in much the same way as an office copier works, using toner rather than ink. Each book is printed in one pass, not as separate signatures. Digital printing has permitted the manufacture of much smaller quantities than offset, in part because of the absence of make-readies and of spoilage. One might think of a web press as printing quantities over , quantities from to being printed on sheet-fed presses, and digital presses doing quantities below These numbers are of course only approximate and will vary from supplier to supplier, and from book to book depending on its characteristics.

Digital printing has opened up the possibility of print-on-demand, where no books are printed until after an order is received from a customer. In the s, due to the rise in availability of affordable handheld computing devices, the opportunity to share texts through electronic means became an appealing option for media publishers. The term ebook is a contraction of "electronic book"; it refers to a book-length publication in digital form. Ebook readers attempt to mimic the experience of reading a print book by using this technology, since the displays on ebook readers are much less reflective. Book design is the art of incorporating the content, style, format, design, and sequence of the various components of a book into a coherent whole. In the words of Jan Tschichold, book design "though largely forgotten today, methods and rules upon which it is impossible to improve have been developed over centuries.

To produce perfect books these rules have to be brought back to life and applied. Many different creators can contribute to book design, including graphic designers, artists and editors. The size of a modern book is based on the printing area of a common flatbed press. The pages of type were arranged and clamped in a frame, so that when printed on a sheet of paper the full size of the press, the pages would be right side up and in order when the sheet was folded, and the folded edges trimmed. The world's largest book is made of stone and is in Kuthodaw Pagoda Burma. A common separation by content are fiction and non-fiction books. This simple separation can be found in most collections, libraries, and bookstores. There are other types such as books of sheet music. Many of the books published today are "fiction", meaning that they contain invented material, and are creative literature.

Other literary forms such as poetry are included in the broad category. Most fiction is additionally categorized by literary form and genre. The novel is the most common form of fiction book. Novels are stories that typically feature a plot, setting, themes and characters. Stories and narrative are not restricted to any topic; a novel can be whimsical, serious or controversial. The novel has had a tremendous impact on entertainment and publishing markets. A short story may be any length up to 10, words, but these word lengths vary. Comic books or graphic novels are books in which the story is illustrated. The characters and narrators use speech or thought bubbles to express verbal language. Non-fiction books are in principle based on fact, on subjects such as history, politics, social and cultural issues, as well as autobiographies and memoirs.

Nearly all academic literature is non-fiction. A reference book is a general type of non-fiction book which provides information as opposed to telling a story, essay, commentary, or otherwise supporting a point of view. An almanac is a very general reference book, usually one-volume, with lists of data and information on many topics. An encyclopedia is a book or set of books designed to have more in-depth articles on many topics. A book listing words, their etymology, meanings, and other information is called a dictionary. A book which is a collection of maps is an atlas. A

more specific reference book with tables or lists of data and information about a certain topic, often intended for professional use, is often called a handbook. Books which try to list references and abstracts in a certain broad area may be called an index, such as Engineering Index, or abstracts such as chemical abstracts and biological abstracts.

Books with technical information on how to do something or how to use some equipment are called instruction manuals. Other popular how-to books include cookbooks and home improvement books. Students typically store and carry textbooks and schoolbooks for study purposes. Many types of book are private, often filled in by the owner, for a variety of personal records. Elementary school pupils often use workbooks, which are published with spaces or blanks to be filled by them for study or homework. In US higher education, it is common for a student to take an exam using a blue book. There is a large set of books that are made only to write private ideas, notes, and accounts. These books are rarely published and are typically destroyed or remain private. Notebooks are blank papers to be written in by the user. Students and writers commonly use them for taking notes. Scientists and other researchers use lab notebooks to record their notes. They often feature spiral coil bindings at the edge so that pages may easily be torn out.

Books for recording periodic entries by the user, such as daily information about a journey, are called logbooks or simply logs. A similar book for writing the owner's daily private personal events, information, and ideas is called a diary or personal journal. Businesses use accounting books such as journals and ledgers to record financial data in a practice called bookkeeping now usually held on computers rather than in hand-written form. There are several other types of books which are not commonly found under this system. Albums are books for holding a group of items belonging to a particular theme, such as a set of photographs, card collections, and memorabilia. One common example is stamp albums, which are used by many hobbyists to protect and organize their collections of postage stamps.

Such albums are often made using removable plastic pages held inside in a ringed binder or other similar holder. Picture books are books for children with pictures on every page and less text or even no text. Hymnals are books with collections of musical hymns that can typically be found in churches. Prayerbooks or missals are books that contain written prayers and are commonly carried by monks, nuns, and other devoted followers or clergy.

Lap books are a learning tool created by students. A leveled book collection is a set of books organized in levels of difficulty from the easy books appropriate for an emergent reader to longer more complex books adequate for advanced readers. Decodable readers or books are a specialized type of leveled books that use decodable text only including controlled lists of words, sentences and stories consistent with the letters and phonics that have been taught to the emergent reader. New sounds and letters are added to higher level decodable books, as the level of instruction progresses, allowing for higher levels of accuracy, comprehension and fluency. Hardcover books have a stiff binding. Paperback books have cheaper, flexible covers which tend to be less durable. An alternative to paperback is the glossy cover, otherwise known as a dust cover, found on magazines, and comic books. Spiral-bound books are bound by spirals made of metal or plastic.

Examples of spiral-bound books include teachers' manuals and puzzle books crosswords, sudoku. Publishers may produce low-cost, pre-publication copies known as galleys or 'bound proofs' for promotional purposes, such as generating reviews in advance of publication. Galleys are usually made as cheaply as possible, since they are not intended for sale. Private or personal libraries made up of non-fiction and fiction books, as opposed to the state or institutional records kept in archives first appeared in classical Greece. In the ancient world, the maintaining of a library was usually but not exclusively the privilege of a wealthy individual. These libraries could have been either private or public, i. The difference from a modern public library lies in that they were usually not funded from public sources.

It is estimated that in the city of Rome at the end of the 3rd century there were around 30 public libraries. Public libraries also existed in other cities of the ancient Mediterranean region for example, Library of Alexandria. Typically not the whole collection was available to public, the books could not be borrowed and often were chained to reading stands to prevent theft. The beginning of modern public library begins around 15th century when individuals started to donate books to towns. This reflected classes in a society: The poor or the middle class had to access most books through a public library or by other means while the rich could afford to have a private library built in their homes. In the United States the Boston Public Library Report of the Trustees established the justification for the public library as a tax-supported institution intended to extend educational opportunity and provide for general culture.

The advent of paperback books in the 20th century led to an explosion of popular publishing. Paperback books made owning books affordable for many people. Paperback books often included works from genres that had previously been published mostly in pulp magazines. As a result of the low cost of such books and the spread of bookstores filled with them in addition to the creation of a smaller market of extremely cheap used paperbacks owning a private library ceased to be a status symbol for the rich. In library and booksellers' catalogues, it is common to include an abbreviation such as "Crown 8vo" to indicate the paper size from which the book is made. When rows of books are lined on a book holder, bookends are sometimes needed to keep them from slanting. During the 20th century, librarians were concerned about keeping track of the many books being added yearly to the Gutenberg Galaxy. Each book is specified by an International Standard Book Number, or ISBN, which is unique to every edition of every book produced by participating publishers, worldwide.

An ISBN has four parts: the first part is the country code, the second the publisher code, and the third the title code. The last part is a check digit, and can take values from 0—9 and X Commercial publishers in industrialized countries generally assign ISBNs to their books, so buyers may presume that the ISBN is part of a total international system, with no exceptions. However, many government publishers, in industrial as well as developing countries, do not participate fully in the ISBN system, and publish books which do not have ISBNs. A large or public collection requires a catalogue. Codes called "call numbers" relate the books to the catalogue, and determine their locations on the shelves.

Call numbers are based on a Library classification system. The call number is placed on the spine of the book, normally a short distance before the bottom, and inside. One of the earliest and most widely known systems of cataloguing books is the Dewey Decimal System. Another widely known system is the Library of Congress Classification system. Both systems are biased towards subjects which were well represented in US libraries when they were developed, and hence have problems handling new subjects, such as computing, or subjects relating to other cultures.

Metadata, which means "data about data" is information about a book. Metadata about a book may include its title, ISBN or other classification number see above, the names of contributors author, editor, illustrator and publisher, its date and size, the language of the text, its subject matter, etc. Once the book is published, it is put on the market by the distributors and the bookstores.

Meanwhile, his promotion comes from various media reports. Book marketing is governed by the law in many states. In recent years, the book had a second life in the form of reading aloud. This is called public readings of published works, with the assistance of professional readers often known actors and in close collaboration with writers, publishers, booksellers, librarians, leaders of the literary world and artists. Many individual or collective practices exist to increase the number of readers of a book.

Among them. This form of the book chain has hardly changed since the eighteenth century, and has not always been this way. Thus, the author has asserted gradually with time, and the copyright dates only from the nineteenth century. For many centuries, especially before the invention of printing, each freely copied out books that passed through his hands, adding if necessary his own comments. Similarly, bookseller and publisher jobs have emerged with the invention of printing, which made the book an industrial product, requiring structures of production and marketing. The invention of the Internet, e-readers, tablets, and projects like Wikipedia and Gutenberg, are likely to change the book industry for years to come.

At first made of rags, the industrial revolution changed paper-making practices, allowing for paper to be made out of wood pulp. Papermaking in Europe began in the 11th century, although vellum was also common there as page material up until the beginning of the 16th century, vellum being the more expensive and durable option. Printers or publishers would often issue the same publication on both materials, to cater to more than one market.

Paper made from wood pulp became popular in the early 20th century, because it was cheaper than linen or abaca cloth-based papers. Pulp-based paper made books less expensive to the general public. This paved the way for huge leaps in the rate of literacy in industrialised nations, and enabled the spread of information during the Second Industrial Revolution. Pulp paper, however, contains acid which eventually destroys the paper from within. Earlier techniques for making paper used limestone rollers, which neutralized the acid in the pulp. Books printed between and are primarily at risk; more recent books are often printed on acid-free or alkaline paper. Libraries today have to consider mass deacidification of their older collections in order to prevent decay. Stability of the climate is critical to the long-term preservation of paper and book material. The HVAC system should be up to date and functioning efficiently. Light is detrimental to collections.

Therefore, care should be given to the collections by implementing light control. General housekeeping issues can be addressed, including pest control. In addition to these helpful solutions, a library must also make an effort to be prepared if a disaster occurs, one that they cannot control. Time and effort should be given to create a concise and effective disaster plan to counteract any damage incurred through "acts of God", therefore an emergency management plan should be in place. From Wikipedia, the free encyclopedia. Medium for recording information in the form of writing or images. Not to be confused with Textbook or Notebook. For other uses, see Book disambiguation. Main article: History of books. I recently bought your newest nature journaling E-book from Amazon to view on the android kindle app!

Of course you did not disappoint! Well worth the money for the amount of information and subject matter! I hope to one day attend one of your workshops fingers crossed! Greetings, Thank you for this. I love it and am setting off to learn how to draw birds. Your presentation makes sense to me. Marilyn Houston. Many thanks for taking the time to put this all together and have it available to anyone that is interested. Having the step by step images there on a loop were a huge help! Thanks again! Thanks for sharing this! I have made it into a Google Slideshow for ease of sharing with my students. I have never considered myself artistic.

My mum ways encouraged it as a child... but even as a small child I was reading anatomy books and learning about gems and minerals. I love birds, so much. I feel this would be a hobby that nicely mixes a love of general anatomy as well as birds. Your guides make it feel achievable and I love that they are species accurate vs just making up a random animal which is also fine, just not to my tastes. Thank you very much Mr. I write from Spain, I am a bird enthusiast and have recently started drawing birds. I found your page and I think it is a wonderful resource for bird illustration. I wonder if you have any post or video on drawing black-feathered birds with coloured pencils...

I am now reading your book on nature drawing and journaling. This book is a real gift for anyone that loves nature... it is helping me to better understand the environment and feel more connected to nature, which is a source of inspiration and joy. I wonder if you can make an updated version in this blog and in your fantastic book correcting the old ways that you point out in your video. I would really like to buy the updated book. I am developing other new material that I will also publish some day. For now the big changes are on those first step by step pages where I am working on blocking in the bird shapes.

You are an amazing teacher. I am in college pursuing my art degree and finding you is a treasure thank you so much! Thank you for this wonderful and scientific tutorial. Thank you for your time. Do you have a book or tutorial on the basics of color pencil drawing? It could be much help for me if you have one. Thanks in advance. Hi Tanima, I have a little on colored pencil in my Guide to Nature Drawing and Journaling, also a few colored pencil posts and a video workshop on this site. I am so happy that this is of help to you and your homeschool group. Let me know if you have any specific needs that I might be able to fill. I spoke to Aaron the librarian about it, as I was quite impressed with it. I would love to join you!

Hi Sheryl, Check out my calendar of events and join the nature journal club! I look forward to meeting you. I love birds and drawing them... which of your books would you recommend for drawing birds seen in the wild... on the go, if you have one that is? Also, do you have instructions on how to use color pencils for drawing nature? One more thing... Did you ever study the tree bark and leaves that go with them? If so, did you write about it? Hi Adina, I will try to make a video about tree bark and leaves, great idea. I would suggest my book: Drawing Birds. The Best of the Best...! Thank you indeed! I love how the clock is used in the drawing to create the body of the bird. Great idea! Very good drawing lesson, I love it! In my drawing class we are learning to draw Sulfur Crested Cuckatoos local birds your tutorial has really helped. Thank Goodness my Search engine showed me this site.

It has really helped. Thanks again. Hi John, Thank you for your feedback... I can write a review... honored to. As a person who has worked at getting even close to the results I wanted in depicting birds, I can say you really nailed the critical elements needed to achieve a high level of bird illustration. As far as projects, I have two possible bird book projects in the works. Scope being determined as we speak. Might want to talk with you about it. ...

Let me know if you ever want to chat. Thank you Tracy, Your work is amazing I have been enjoying exploring the illustrations on your site. Thank you for your support! I and delighted that you like the book so much. Would you be willing to write a review? I am now working on a new book on nature sketching and journaling. I have having a great time with it. What are your new projects. Bookmarking this page! The Learning the Feather Groups diagram of the sparrow is extremely helpful. I enjoyed your new book-fabulous sketching techniques. Photos and painting reproductions use a cool palette. Excellent web page — really cleverly done! Nice drawings, too.

All the very best with yours, John! Cheers, Katrina. Katrina, I have been exploring your website and I am really excited about your new book. I wish I had it for reference when I was working on mine. I encourage my readers to check it out and learn from those drawings. Artistic, creative, playful, accurate and alive. It really helps to be able to see into the subject. You must be able to understand the surface that is below what you are drawing. If you want to draw the feathers, you must understand the skin contours and feather tracts.

If you want to visualize the skin, you must understand the skeleton. If you want to pose the skeleton, you must feel the energy, intention and soul of the bird. Many thanks for the kind words, John. And yes, absolutely! Not in place of field observation, but to supplement and enhance it. John, Am looking forward to your book coming out soon! The drawing moves too fast to get each step. Is there some way to do this? I had trouble with the other moving subjects in the painting lessons too. Thanks, am drawing every day now, Diane. Diane, Look for the new book in September. I am very excited about it. Reviewers have said that it has really helped them draw. If you are having trouble downloading the PDF, try clicking it and dragging it onto your desktop. Let me know if that does not work. Simply gorgeous work, and a truly beautiful tutorial. I hope to take a workshop from you! Your drawings are lovely, and depict the life and attitude of the bird.

I also paint birds for a living for field guides. I had the privilege of visiting with Don Eckelberry, one of my favorite bird artists. He is no longer living, but it is worth looking up his work if any of your email participants want to look at some of the best bird art that was produced in the past. Thank you for your kind words about my drawings.

His manuscript Techniques in Bird Illustration is very helpful. Have you seen it? Please tell us about your visit with him. Where can we see some of your work? Don Eckelberry was both gruff and kind. He did not suffer fools, but was exceedingly generous with advice and constructive criticism. Don was approachable as long as you did not have an unrealistic view of your illustrating capabilities. To those who were receptive, he had nice as well as constructive things to say. That is a wonderful story. May we all move forward in our art without letting our egos block us from critically analyzing our work.

It is important to keep that inner critic constructive. It should support us in drawing more, each sketch or painting a lesson for the next. Keeping the inner critic constructive. I will be talking to my art students about that concept. Here you go! This is a great time to watch and sketch migrating hawks. I think you will find this blog helpful. For a reference people can go to you tube, google images or a stock website. I always use this site for my bird photos. I came across your site via the iPad Flipboard app. That is a very cool animation about How To Draw A Bird, and I appreciate the effort that went into putting it together. Thank you Dave, I hope it is of help to you. I scanned my drawing as I drew it and pasted them together. Wonderful, John! I learned a bit from one of your GGAS workshops and look forward to your book. Your email address will not be published. Using Photographs to help you Understand Birds I use high-resolution photographs to help me study bird plumage.

Download high resolution version for printing here: How to draw birds Once you have the basic shaped blocked in you are ready to add details on top of that framework. This is the fun part but do not skip the first steps and jump to drawing the beak and eye. Details without structure will get you nowhere. Start with the basic Shape The most important part of the drawing is getting the basic shape right at the start.

Look below the surface Underneath the feathers, a bird looks like a plucked chicken. Learn to see feather groups Studying bird anatomy will help you draw birds more accurately. Birds are shape shifters The feather groups are under individual muscular control and can be fluffed up or moved together. Please share if you like it! August 29, at pm. Would love to get one. June 13, at am. John Muir Laws says: I love the Sibley guides. They are really well done. There is an east and a west cost version. July 1, at pm.
